
The Aftermath

"MOTHER, I just took a splinter out of my hand with a pin."

"A pin! Don't you know that's dangerous?"

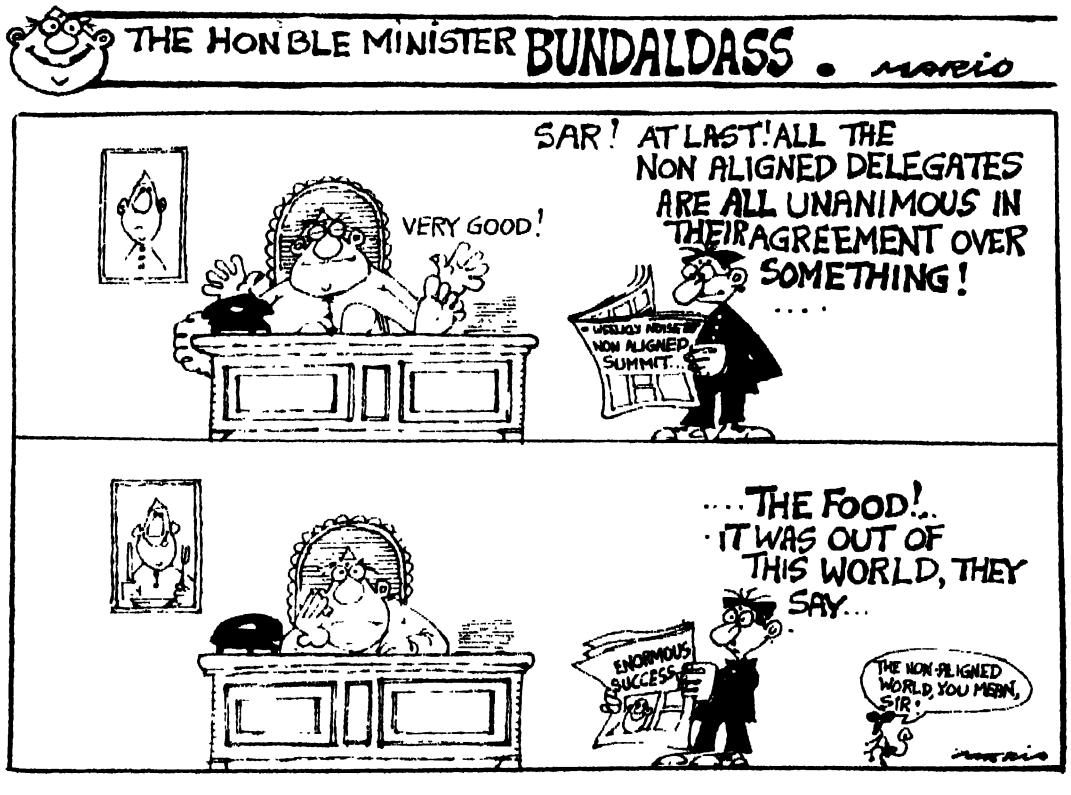
"Oh no, mother, I used a safety pin."

"WHY didn't you shave this morning Ashok?"

"Well, Sir, there were eight of us shaving before the same mirror this morning and I must have shaved the wrong face."

A LADY'S maid rushed into the room and cried "Hurry, your husband's lying unconscious in the hall beside a large round box, with a piece of paper clutched in a hand."

"How exciting, my fur coats have arrived," the lady said.



THE Manager of a hotel suggested to a guest that he step outside and see the beautiful sunset.

"How much will it cost?" asked the guest cautiously.

A VOTER stood outside the voting booth for about thirty minutes. Finally, he stuck his head through the curtain and said "Lady, does it take you that long to vote?"

"Who is voting?" hissed a heavy, fat woman. "I just stepped in here to try and loosen my girdle The damn zipper's stuck."

"PAT, if Mr John arrives before I return, please tell him that I will be here at 2 p.m."

"Okay sir, but what do I tell him if he doesn't come?"

CUSTOMER: "Do you serve women in this bar?"

Barman: "Sorry, sir, you have to bring your own."

"PETER, can you tell me the difference between cowardice and caution?" asked the teacher. "Well, teacher, when you are afraid it is caution, when the other person is afraid it is cowardice."

"HAVE you got the book, "Man, the master of Woman," enquired a customer. "Fiction counter, to the left sir," was the reply.

VANTED: Men, women and children to sit slightly used benches on Sunday mornings. am to 12 noon. Reads a Notice Board near urch.

WELL, son," asked the father, "how are ur marks at school?"

"Under water" said the kid.

"What do you mean?"

"Well, they are below 'C'level."

AFTER winning an argument with his wife the sest thing for a man to do is to apologise.

WE need a responsible man here," declared personnel manager at the interview.

"Sure sir, in all my previous jobs, they held me sponsible for all the mistakes."

HIS book will do half your work at your ams," declared the book seller.

"My goodness, give me two of them, then" owed a lazy student.

A FATHER was scolding his son "Idiot! I ver told lies at your age."

"Then at what age did you start?" asked the n.

WHY did you leave your last job?" asked a end.

"Illness, the boss got sick of me."

EMPLOYEE: "Sir I have been here for 10 years, ing three persons' work on a one-man's salary. ow I want a raise."

Employer: Well, I can't give you a raise but if u tell me who the other two men are, I will fire em."

A YOUNG man was in love with a beautiful l. One day she told him that the next day was r birthday. He promised to send her flowers, e for each year of her age. He asked the florist send a bunch of 20 roses to the girl. But the rist, in a mood to make his customer happy, t an extra dozen in the bunch.

That was the end of the love story

BUT why do you drink so much? asked a dge.

"Well, sir, I got into the very bad company of ee friends. Whenever I have a full bottle of wine, ey never touch it, so I have to finish it on my m," said the drunk.

YOUNG James came home after a fight. ighting again? Didn't I tell you to count to a 0 when you are angry?"

"Yes mummy but the other fellow's mother told n to count only upto fifty."

A MAN was told by his doctor: "You are oing to make medical history, you will be the ly male ever to become pregnant."

The man replied, "This is terrible, whatever will e neighbours say, I am not even married."

DOCTOR: "I am sorry, but your wife's brain had completely gone." "Doctor, I am not surprised. She has been giving me a piece of her mind for the last 20 years."

IT is a wise wife who asks for something she knows her husband cannot afford. So that she can compromise on what she really wants.

"I WILL meet you half way" the wife said during a fiery argument. "I will admit "I am right" if you admit "you are wrong"."

ARUN was very annoyed with his wife. "Good heavens, Anitha, I wonder why God made you women so beautiful but so stupid."

Anitha answered, very sweetly, "God made us beautiful dear, so that men could love us. Then he made us stupid so that we could love you in return."

A DOCTOR said to a colleague: "You know, I performed that operation in the nick of time, otherwise he would have recovered without it."

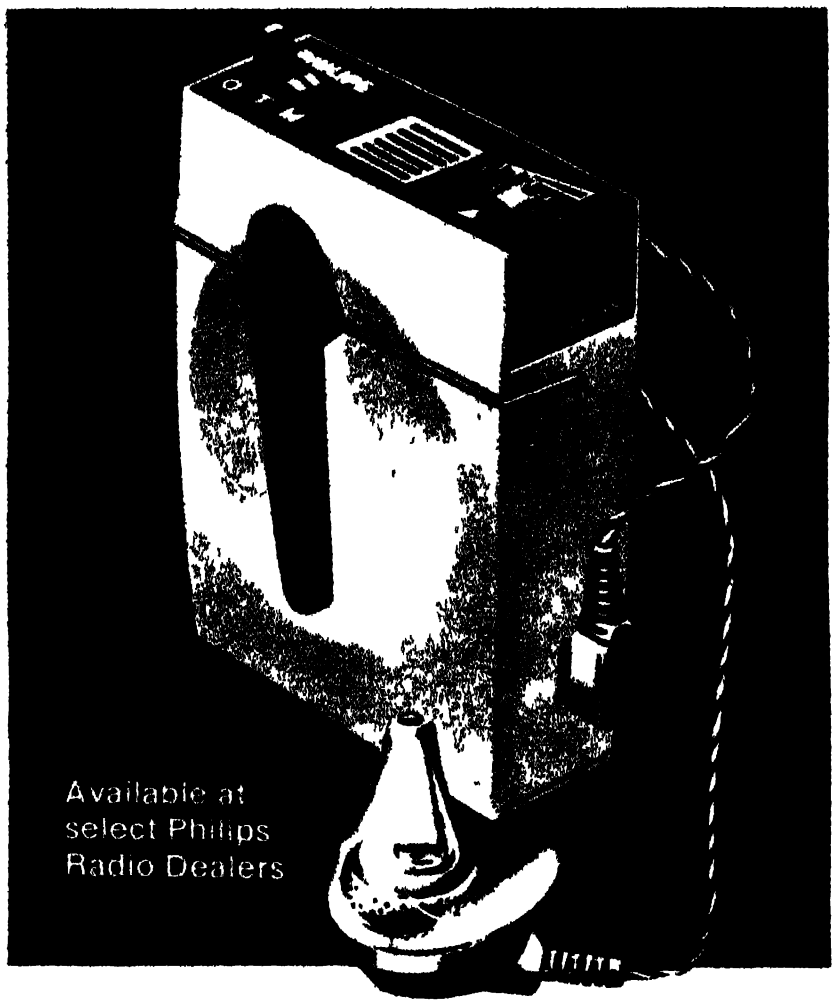
Philips HP 8142/27
India's ONLY hearing aid with a choice of 4 receivers



SAVE by changing only the receivers – instead of buying a complete new hearing aid each time.

Only Philips has a choice of 4 receivers to go with the Hearing Aid. These provide correction over the entire range of hearing losses. So you need not buy a whole new hearing aid every time your hearing power decreases Just change the receiver

3 different ear-tip sizes

It's essential because growing children need a replacement of ear-moulds at least twice a year! Only Philips gives you this choice. The ear-tips are soft- and inexpensive!

Free Service Unit

If the hearing aid comes for repairs (which is rare) we'll give you a temporary replacement FREE With the kind of after-sales service you can expect only from Philips

Feather weight and compact, the Philips Hearing Aid has special design features to ensure long battery life and ease of operation

When it comes to computerised attendance recording...

we don't just stand out.

We stand alone

KELTRON CARD ATTENDANCE SYSTEM

We stood out five years ago, when we pioneered the development of microprocessor based attendance recording systems in the country. And we stood alone.

We stood out when we installed around a hundred microprocessor based Card Attendance Systems (MCAS) in just over a few years. And we stood alone.

Today, it is not just our experience and sales that stand out.

It is our MCAS itself.

Because it is the only 'Stand Alone' system in the country. Which means, with it you can handle attendance recording and generate a variety of print out particulars like hours worked, overtime done, absentee lists etc.

And all this without any additional equipment.

But, that's not all.

Versatile Floppy Based System.

Random Data collected by the card readers can be stored on a floppy disc which can be read later by ANY compatible computer. This would be ideal for you, if you don't have an in-house computer.

What's more, with an Asynchronous Data Multiplexer (ADM), you can collect data from a number of MCAS's and have it all recorded with a Floppy Drive System (FDS) on diskettes.

In case, you do have an in-house computer, the total system MCAS's through ADM to FDS – can be linked to it. Thus the collected data can be transferred to your own computer.

Optional Features

- **Impulse clock driving facility.**
- **Siren Actuation facility.**
- **Simultaneous punching facility through additional card readers.**

With so many advantages, it is easy to see why we always stand out. And stand alone.

Because there's room for only one at the top.

This Week's Bridge

Relay Trouble

T the recent Calcutta Invitation tournament, Jaggy Shivdasani d I played together, in the absence of r regular partners. The train ride from mbay to Calcutta is long, and usually y boring but neither of us minded it cause it gave Jaggy enough time to ne to grips with the Relay system which evised a few years ago, and which I play ularly with Kejriwal.

There are many Relay systems in the rld, most of which need years of prac-. My methods are not too complicated, l once the logic is grasped, bidding uracy improves immeasurably.

Like on this deal for example, from the lcutta tournament:

st dealer, Both Vul.

st	East
AKQ2	♠10964
A6	♥KQJ72
AQJ5	♦8
A63	♣K82

had a long auction:

st	East
inash	Jaggy
	2D
	2S
	3S
	4D
	4NT
	5NT
	7C
	P

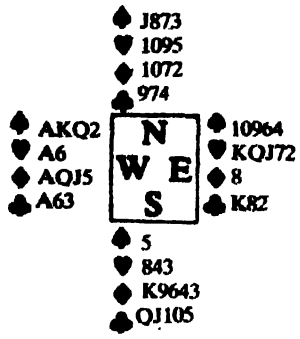
Footnotes wouldn't do justice to this auction. All my bids from 2H to 6H were Relays. The meaning of the bids is:

1. IC 16 up
2. 2D 5 or more Hearts, 8 or more points
3. 2H Relay for distribution
4. 2S 4 Spades, or 5 Spades and 6 Hearts
5. 3D Relay, agreeing Spades
6. 3S 2 controls, one Ace or two Kings.
7. 4C Trump Ask
8. 4D 4 Spades, no top honour
9. 4H Asking in Hearts
10. 4NT King of Hearts
11. 5D Asking in Diamonds
12. 5NT Singleton Diamond
13. 6H Asking in Hearts
14. 7C KQJ five Hearts.

So at the end of 14 bids, I could call East's hand almost to the pip, to reach the odds-on 7 Spades, a contract very difficult indeed to reach with most existing methods. With Spades 3-, 2, or even 4-1 with the Jack singleton, the Grand Slam is almost laydown. If Spades break 4-1, with the Jack in finesse, these are reasonable chances.

Alas! North had 4 Spades to the Jack, so the Grand Slam had to go down.

At the other table our opponents got to Seven Hearts, a distinctly inferior contract. This was the whole hand:

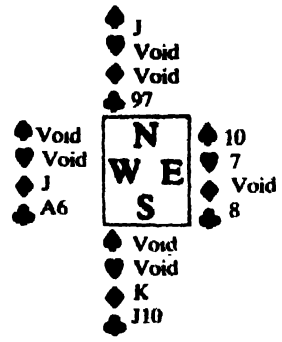


South led the Queen of Clubs. Declarer could see twelve tricks off the top, provided the major suits behaved, and a Diamond guess would give him the thirteenth. He won dummy's Ace of Clubs, drew three trumps discarding a Club from dummy, and tried the Spades. When South showed out on the second Spade, he cashed the third Spade, South pitching a Club and a Diamond, entered his hand with the King of Clubs, and played off two more trumps. South naturally hung on to three Diamonds, and although declarer took the Diamond finesse, that was only twelve tricks. North's nine of Clubs was good enough to beat declarer's eight spot, enabling South to discard his high Clubs.

No Swing.

But declarer could actually have made this contract. The opening lead is won in hand, with the King, and trumps are drawn, *dummy discarding a Spade on the third round*. Declarer now finesses the Queen of Diamonds (superior to taking the ruffing finesse, very slightly, because that gives declarer an extra chance if Spades do not break), and tests the Spades. When the 4-1 break comes to light he cashes his Sapde winners, discards a Club on the Ace of Diamonds and ruffs a Diamond, trying to drop the King in three. Which, by the way, is why a Spade should be discarded on the third trump. And the small Club shouldn't be discarded either, because it has a more important role to play later.

The hand has now reached this stage:



Declarer is in hand—he plays his last trump, squeezing both opponents. South must keep the King of Diamonds, so he is forced to pitch a Club. Dummy now discards the Jack of Diamonds, its work done, and the screw turns on North. He must keep the Jack of Spades, so he too must discard a Club, and dummy's six of Clubs is the thirteenth trick.

Then in the Finals against Pakistan we had another relay auction in which we quickly identified that the King of trumps was missing in a nine card fit, so we stopped in a small slam. Zia and Masood blasted into seven, the finesse worked, trumps were 2-2 (even the Jack was missing), and the Grand Slam made!

39.Qf6) If 39.Qg5ch, Kf8 40.Qg7ch, Ke7 41.Qg5ch, Kd7.

40.Kb1) After 40.Kb3, c4ch etc. mates.

41...b3) Threat 42...Rxa2 mate. 42.Bb2 is met by 42...Rg1ch.

Lindberg-Dan Cramling Sweden, 1981

1.e4, c5 2.Nf3, d6 3.d4, cxd4 4.Nxd4, Nf6 5.Nc3, a6 6.Be3, e6 7.g4, 8.g5, Nfd7 9.a3, Nb6 10.Qd2?, Bb7 11.000?, N8d7 12.f4, Nc5 13.Bd3, Rc8 14.Kb1, Nxd3 15.cxd3, d5 16.exd5, Nxd5 17.Nxd5, Qxd5 18.Rhg1, Bd6 19.Qf2, 00 20.h4, b4 21.axb4, Bxb4 22.h5, Qa5 23.Nb3, Qa4 24.Nc1, Bd5 25.Bd4...

Position No. 314: 25...Rxc1ch! 26.Rxc1, Qa2ch; 0-1.

Sicilian, Najdorf Variation. The popular line is 6.Bg5. 6.Be3 is often met by 6...e5.

7...b5) Tzeshkovsky-Mihachshin, USSR Ch 1981: 7...h6 8.h4, b5 9.a3, Bb7 10.Bg2, d5 11.g5, hxg5 12.hxg5, Rxh1ch 13.Bxh1, Nxe5 14.Nxe6!, Nxc3 15.Qh5!, Qe7 16.Nxf8, Qxf8 17.bxc3, 1-0 (36)

8...Nfd7) Tzeshkovsky-Dvoiris, Sochi 1981: 8...b4 9.gxf6, bxc3 10.fxg7, Bxg7 11.b3, Nd7.

10.Qd2?) This move is passive and next move Black practically 'castles into it'. Sharp and consistent is 10.f4 and f5.

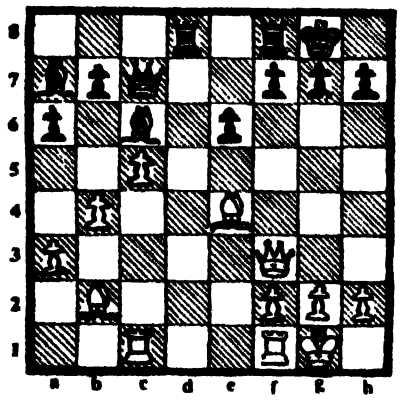
12...Nc5) White's e-Pawn comes under pressure; if 13.Bg2, Nc4.

20...b4) Black's attack is far speedier than White's.

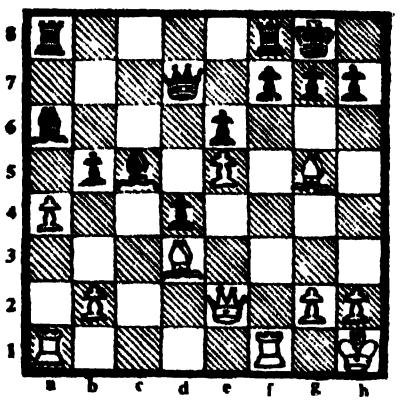
26.Rxc1) If 26.Kxc1, Bb3 and ...Qa1 mate.

Nielson-Hoen (20.2.83): In note 17.f4) 20.Nxg6 etc. is not convincing. Better may be 20.Nxc6, Qd6 21.Bxd5!, hxg5 22.f5.

R.B. SAPRE



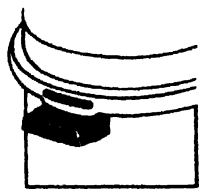
No 315 White to play



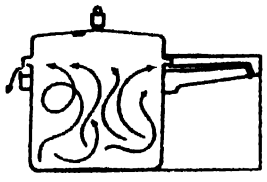
No. 316 White to play

Here is how the GRS* makes the New Prestige the only totally safe pressure cooker

New Prestige



What is the GRS?
The Gasket Release System is a unique design innovation that makes pressure cooking as safe as boiling water. A slot in the lid over the rubber gasket provides a safe, sure outlet for steam when it reaches dangerous levels.
The GRS makes the New Prestige the only totally safe pressure cooker



How does it work?
All pressure cookers use steam to cook food faster. Sometimes more steam than is needed builds up inside the cooker. Under normal conditions this is let off from the weight valve on the top. If this vent gets clogged with food it could lead to an eruption.

In the New Prestige, on the rare occasion when steam builds up excessively, the GRS enables the rubber gasket to expand and stretch out of the slot and let off the steam downwards safely.

Why is the GRS essential?
When you replace a safety plug you may get a spurious one. This will not work in an emergency. Unfortunately you have no way of telling a genuine from a spurious safety plug. Why take a chance?

THE GRS NEVER FAILS TO WORK

100% safe

The GRS does not interfere with the normal cooking process.
No, not at all. There is nothing to replace. All you do once the steam is let out is push the rubber gasket back into the slot with a spoon, clean the vent and use.

The cooker that even a child can handle — that's what the GRS makes the New Prestige.

*Gasket Release System

BRUTALISING THE POLICE

Are you considering savings schemes which do not offer full protection for your family?

When somebody tries to talk you into private savings schemes, ask yourself whether they offer as much value as an LIC policy. Study the following chart which gives you a fair comparison.

Check list	Some savings schemes	Life Insurance
1 Is the scheme guaranteed by the Government ?	No	Yes
2 If death occurs due to natural causes after one joins the scheme, will the whole amount be paid to one's family ?	No	Yes
3 Will the widow or the orphan get the full benefit, without continuing the payments ?	No	Yes
4 If accident insurance is offered, is it irrevocable ?	No*	Yes
5 If the person who joins the scheme dies within 60 days, does his family get the accident benefit ?	No	Yes
6 Can disability benefits be provided for ?	No	Yes
7 Is there income-tax exemption on premiums ?	No	Yes
8 Do the premiums entitle you to relief from compulsory deposit ?	No	Yes
9 Is there saving of Wealth Tax ?	No	Yes
10 Is there saving of Estate Duty ?	No	Yes
11 Is there provision for loan for housing ?	No	Yes
12 Will banks accept policies as security for loans ?	No	Yes
13 Are claim payments free from income-tax ?	Not always	Yes
14 If the scheme is wound up for any reason, are you sure of getting your money back ?	No guarantee You may have to go to a court of law.	Yes LIC policies are fully guaranteed by the Government of India.

*Accident insurance offered by private savings schemes is a third-party arrangement. Availability of, or conditions for, accident cover may change from time to time.

With life insurance, the answer is yes, yes, yes, to all these questions about benefits to you and your family. You're taking the right step when you opt for life insurance.

There is no substitute for Life Insurance

ARE YOU READY?

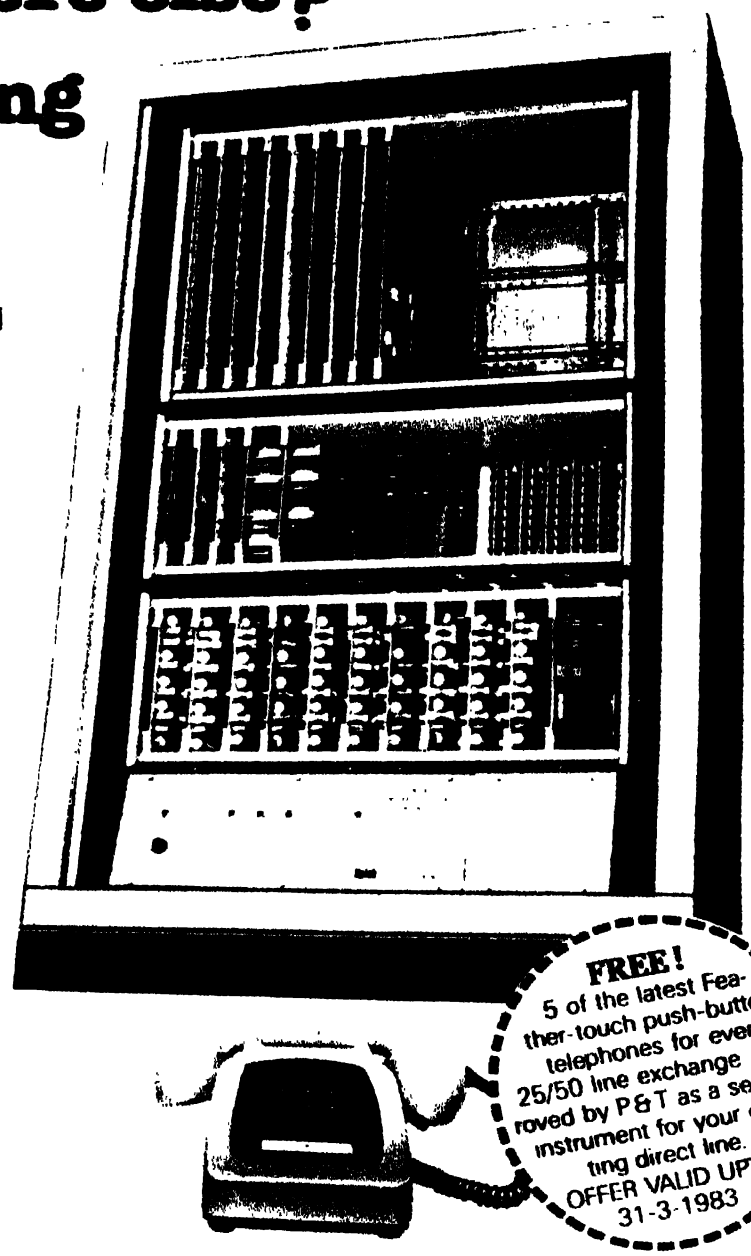
WHEN ITT'S BUSINESS IS COMMUNICATION

could India's best in-company exchange be anywhere else?

Introducing EPAX
in 10/25/50 lines

ITI, pioneer of India's telephones, exchanges and sophisticated communication equipment presents EPAX (Electronic Private Automatic Exchange), its latest venture in this field. With 10, 25, 50 or 200 lines. Take a look at some of its special features:

- Low Cost
- Low Power
- Programme Logic
- Flexible Expansion
- Ring-when-free facility in 50/200 lines
- Countrywide network of after sales service



EPAX makes talking both ways easier

FREE! 5 of the latest Feather-touch push-button telephones for every 25/50 line exchange Approved by P&T as a second instrument for your existing direct line. OFFER VALID UPTO 31-3-1983

LETTERS TO THE EDITOR

Of Captains And Caprice

Sir—Mr Raju Bharatan's article, "New Captains For Old" (March 6), was interesting. It gave the history of Indian cricket with all its vicissitudes.

The captain plays a vital role in cricket. He has to judge the wicket, use his bowlers judiciously and maintain the team spirit. (Bishen Singh Bedi, one of our "popular" skippers, was sacked in his heyday because of the politics of regionalism and display of partiality.

Almost every year we have a new captain whereas in West Indies and in Australia captaincy remains unchanged for years together.

Mukund Kudtarkar
Bombay

Stop Phoolan Around!

Sir—Vithal C. Nadkarni's anti-view on Phoolan Devi ("The Taming Of The Shrew", March 6) makes bizarre reading. He is right in denouncing the tamasha of Phoolan's surrender in Bhind. The event proves nothing but the stupidity of some of our politicians. But in his scholarly study of the origin and growth of the Dacoit Queen's myth, Mr Nadkarni seems to take the alleged raping of Phoolan by a gang for 23 days lightly—he rhymes leaps and bounds with rapes and rounds!

What is the difference between Arjun Singh, the Madhya Pradesh Chief Minister who arranged the tamasha of Phoolan's surrender, and the writer who considers the raping of a woman by a gang for 23 days an occasion to celebrate with a bawdy rhyme?

Ramlal Agarwal
Jalna

The Devil's Dues

Sir—Applications are hereby invited for scholarships and prizes to be awarded to reputed killers, brutes and dacoits.

Qualification: The candidates should have a minimum of three years' experience in killings, robberies and kidnappings. He/She should have widowed at least two dozen women and committed a massacre. He/She should also have scored a half century in robberies and kidnappings.

Scholarships and Prizes: The prizes include more than 5 acres of land and "the Devil's loan" (plus the ransom money the candidate may have extracted from the kidnap victims). A scholarship of Rs 500 a month with other allowances is also included.

Assurance: A categorical assurance will be given to all candidates that they will be turned into "Heroes among Evildoers" in public and also throughout our kingdom by our disciples called "the mediamen and women of the Devil".

Candidates should not worry about God's good people because we have obtained the boon of immunity from the Goddess Durga!

To Our Agents: Whosoever ropes in candidates for these scholarships and prizes, will get a promotion in the cadre (say for instance, from the Devil's state service to the Devil's national service) and will also be honoured with the title "A good disciple"

Director,
Govt of the Devil,
(Devendra Mahapatra, Barhampur)

Jarvik's Valentine

Sir—Dr William De Vries and Robert Jarvik ought to be honoured with Nobel Prizes for their feat of making the man-made heart a functional reality ("The Man-Made Heart Is Here", February 27).

I am sure that the JARVIK 7, with its accompanying power-unit, will be made compact enough in the coming years ultimately to make the use of man-made hearts as simple as spectacles!

C.P. Belliappa
Coorg

Mind The flag

Sir—I had the pleasure of going through a recent issue of *Weekly* (February 27).

On the cover page you have a collage of flags ("The Non-Aligned—Scaling New Heights?"). In the absence of proper information, the old Iranian flag has been printed.

I am enclosing the new flag of Iran for correction.

Ali Salehizadeh Monshadi
Acting Consul General
Consulate General of the
Islamic Republic of Iran
Bombay

Sir—Kudos for bringing out a special issue on the eve of the Seventh Non-Aligned Summit. All the articles were noteworthy. I particularly liked "The Dangers Ahead" by J.D. Singh—it was short, precise and thoughtprovoking.

The Non-Aligned Movement faces grim challenges from within. The Non-Aligned countries in their relations should be firm and consistent in their refusal, denial and condemnation of an international policy based on the use of armed force. They should absolutely refuse to recognise results achieved by the use of violence.

Khursheed Ahmed
Patna

Assam's Agony

Sir—"Assam Elections—A Mockery Of Democracy" by Sujata Anandan tends to slander the CRPF which is doing a very difficult job under extremely trying conditions in Assam (February 27). The author writes: "At yet another district town, CRPF men opened fire arbitrarily, killing four, when a group of men attempted to decamp with bullet cases and other ammunition stocked there by the guards." Though details are not given, could this type of firing be called "arbitrary"? Even a private citizen can intervene to the extent of causing death in saving persons and property against murder and arson.

Further she says, "CRPF jawans have been instructed, a CRPF jawan tells me, by their officers and the administration that the Assamese are not unlike the Naga and Mizo insurgents in the neighbouring States." No one in the force has ever issued such instructions to the jawans. We wonder whether the author ever had an opportunity to talk to any CRPF jawan.

According to the article, against the CRPF bullets, Assamese exhibited only gunny-bags filled with stones and rolled these at the jawans from certain vantage points as their defence. Obviously the author is not well-informed. There were numerous instances when the CRPF men on duty were fired upon by the agitators apart from attacks with deadly weapons like poisoned arrows, spears, daos etc. The extremists among the agitators had put hidden spikes on the roads to deflate tyres of vehicles and violent armed mobs had attacked small CRPF parties with a view to killing them and taking away their weapons. In these incidents, a number of CRPF men have been killed and seriously injured.

Moreover, Ms Anandan writes: "They never relax; not even at roadside "dhabas" and wayside inns. Nothing moves them, not even women". We take this as a tribute (though unintentional) to the discipline, training and sense of duty and dedication of the CRPF men. CRPF men are not allowed to eat at wayside *dhabas* or inns. They get food from their units, both as health and safety measures. You may please also note that, in spite of heavy deployment and violent incidents all around, not a single allegation of molestation of any woman by our men was reported.

N. Bhardwaja
Asst Public Relations Officer
Directorate General, CRPF,
New Delhi

Sujata Anandan replies:

I have reported factually and accurately with no attempt to malign or slander the CRPF, as claimed by Mr Bharadwaja

It is perhaps in the fitness of things for Mr Bharadwaja, as Assistant Public Relations Officer of the CRPF, to let out howls of protest at facts that do not exactly enhance the reputation of his organisation.

Mr Bharadwaja seems to be under the misconception that just because further details of the CRPF's gory record in Assam were not carried (due to exigencies of space, I may add), the report is distorted.

In fact I have it from some CRPF personnel themselves that the firing was more arbitrary than essential with a view to creating panic among the "agitators". And however much Mr Bharadwaja may deny the fact, the CRPF men admit that they have been given a totally false picture of the people and the situation in Assam.

Certainly, by no stretch of imagination can such statements from within the ranks of the CRPF be considered "hearsay", as Mr Bharadwaja alleges. He should appreciate that as a professional journalist who understands the consequences of misleading readers with wrong information, I would be the last person to base my reports on hearsay and flimsy, unsubstantiated charges.

May I ask, if avoiding critical facts such as the incident at Sipajhar where CRPF men bodily ("arbitrarily"?) lifted four young men and hurled them into the fire that had engulfed the block development office there, is, by the CRPF's standard, the hallmark of accurate reporting?

How the CRPF men are fed under the regulations in force is not really relevant in this context. I did run into a half dozen of them at a roadside dhaba, some kilometres from Gauhati.

Even reading between the lines, no discerning reader could accuse me of having hinted in my article that the CRPF were involved in cases of rape or molestation. The compliment was fully intentional for even as I was disgusted by the atrocities committed by some of the CRPF, I was impressed by the others' devotion to duty.

I have made every effort to be fair and objective and, if the truth was found unpalatable, I can hardly be accused of bias. I stand by everything that I have said in my report, indeed, I have a lot more information that remains unpublished. Mr Bharadwaja protests too much.

Kitchen Caucus

Sir—In "Future Of The Kitchen Cabinet(s)" (February 20) Nachiketa has overlooked an important point; Maulana Azad (until February 1958) Rafi Ahmad Kidwai (until October 1954) and Pandit G.B. Pant (from 1955 to February 1961), belonged to Jawaharlal Nehru's inner circle. Panditji always consulted them on all important matters till their last days. And in many matters their opinion prevailed. To say that Messrs Morarji Desai and S.K. Patil had been very close to Panditji is not really true.

Dr M. Hashim Kidwai
AMU, Aligarh

Sir—The two interesting accounts by Nachiketa and Sitansu Das indicate that all the members of the Kitchen Cabinet, inner or outer, are insecure. Even Mrs Gandhi constantly feels insecure due to the insecure company she keeps.

In any system relying on a single source of power, such a chain reaction is inevitable.

Sujash Kumar
Calcutta

Erotic Classics

Sir—In his article, "Sex Revolution And Hinduism" (February 20), P.K. Nijhawan is dealing with ancient Hindu culture and not the present-day Hindus. Modern Christians are quite frank about sex and it is the Hindus who seem to be sex starved and are, as a result, prone to perversions.

Mihir Bain
Calcutta

Sir—P.K. Nijhawan's idea of "Christian ethos" is based purely on present-day "Christian human concepts", which have nothing to do with the teachings of the Jewish prophets as confirmed by the One True God's "Only Begotten Son", Jesus, the Messiah. "Sin" as stated in the New Testament is "transgression of the law" of God. It is God's commandment to man to "multiply and replenish the earth". Sex is permitted only within the bounds of marriage. And this law along with every commandment of God given to the nation of Israel is for humanity as a whole.

Bro Lukas Ninan
Bombay

Sir—In ancient India when sage Vatsyayana wrote the erotic Kama Sutra it was appreciated *not* because it was an amatory manual but because of its literary style.

Sanskrit literary works—both religious and secular—openly describe feminine beauty. Adi Sankara has so minutely described the contours of Goddess Parvati that one wonders how a sanyasin became so familiar with female physiognomy!

Mrs Jaya Venkat
Nilgiri

Your Affairs: In Memoriam

Sir—One of the most cherished moments of my life has been when, in the far corners of the world, I have been recognised, not as Kamini Kaushal but as the daughter of Prof S.R. Kashyap. His students and associates hold him in deep regard and respect even today, an emotion rare in these times.

Many institutions and halls have been built to immortalise his memory. I, as his daughter, and in a small way, would like to institute a scholarship in botany, his field of research.

What better time than now, on his hundredth birth anniversary? I would very much appreciate ideas and suggestions from your readers for implementing my desire.

My address is: B2 "Anita", Mt Pleasant Rd, Malabar Hill, Bombay 400006.

Kamini Kaushal

Punjab In Flames

The country's unity and prosperity are menaced as never before by the Akali agitators and the radicals' demand for a "Khalistan". Punjab, justly renowned as India's granary and as its sword-arm, now teters on the brink. The complex and emotive issues *must* be speedily resolved to avert disaster. On the occasion of the Baisakhi festival later this month, the *Weekly* devotes a special issue to the land of colourful warriors, Sikh and Hindu, the problems that beset it, the State's unique role in the service of the nation, and the rich promise that it holds for the future. Contributors include Surjit Singh Barnala, Justice Gurdev Singh, Darshan Singh Maini, Ganga Singh Dhillon and P.K. Nijhawan. Plus spectacular colour features and a survey of the political scene by K.C. Khanna.

Godmen Are Frauds

"Cacophony about Godmen in this country has reached a crescendo. . . . it is necessary to put matters in perspective," says Vasant Sathe, Union Minister for Fertilisers and Chemicals.

Brutalising The Police

eorge Fernandes argues that police excesses have their base caste antagonisms that are intertwined with the class nterests. "It is the upper-caste policemen," he says, "who are esponsible for the atrocities: those killed are Harijans and ther weaker communities. The British legacy continues to be pheld by the successor government."

HROUGHOUT THE DAY, the policeman sees the wrong side of life the worst aspects of uman behaviour His eyes and psyche are brutally exposed to the morbid sight of corpses in anous states of decomposition

—NURDIN PARDIWALA

THOUGH it may sound somewhat far-fetched, the fact is that 5,000 years of the caste system and 150 years of British rule are at the root of police barbarism in our country. The Governments that succeeded the Imperial British power have only compounded a situation that existed before them, proving in the process that the transfer of power in August 1947 from the colonial to the native rulers has not brought about any change in the social or political life of our people, save in the life of the elite Indeed, most of the police atrocities against the people can be directly attributed to the perverted desire of the elite to grab everything it can by means mostly foul

If the British decided to brutalise the police in India, they did so in the interests of the Empire. If their armies conquered India for them, it was the police that held the entire nation captive for them The fear of the baton and of the gun drummed into the hearts and the minds of the Indian people is what ultimately sustained their rule Policeman may have been given other responsibilities, like regulating traffic or catching petty thieves. But that was not the purpose of their existence. They were not to be friends of the citizens, helping them out in their moments of distress and in return being befriended by the people.

The police were the state, the state was British, the people were the enemies of the state and the police was there to deal with them as such.

The war of freedom in 1857 made the British realise that the baton and the gun alone would not enable them to hold on to India for long. And so they began using the caste and religious antagonisms to divide not merely the people, but even the instrument through which they intended to rule This is evident from a letter written in 1858 by Lord Ellenborough (then President, Board of Commissioners of the East India Company, and a former Governor-General) to the Chairman of the Company. While urging that "the Sepoy must be made to *fear his officer* more than the enemy", the letter goes on to evaluate the experience of 1857 and says "The difference between the three armies (the Bengal, Bombay and Madras armies

Probing The Mind Of The Force

THE carnage in Assam has brought the role of the police vis-a-vis the Government and the Administration into sharp focus all over again. The controversy surrounding the presence of the Central Reserve Police Force in the troubled State makes this as good a time as any to undertake a detailed probe into the tortuous workings of the police mind Bhagalpur, Baghpat, Bellary—the outrage continues unchecked The image of the police has never been as black as it is today An ex-judge had described our police as the most organised criminal force in the country An extreme view, maybe, but the public cannot be blamed if it reaches a similar conclusion based on the gory newspaper headlines it encounters day in day out

Cordial relations between the police and the public presuppose that they respect each other This respect is totally lacking. The police have their own problems. they find themselves increasingly at the mercy of politicians: they find that they have to carry the can whether they act or don't act. When they act, the charge of police excesses is recklessly made: and what hurts most is that, more often than not, it is a political ploy. When they stay their hand, they are equally mindlessly accused of not doing their duty.

Only last month, the Prime Minister drew pointed attention to the habit of mind by which we ignore the dangers inherent in indiscriminate and total condemnation of the police force in the country The nub of the problem is to get the police to function as an efficient and impartial law-enforcement agency motivated by the ideal of public service This is not easy when you consider their service conditions A trip to the Police Lines in the Mahim-Bandra sector of Bombay, for instance, is enough to settle any doubts on the score Here the constabulary live in near-primitive conditions in prefabricated houses adjoining the notorious Dharavi slums. They live in what is a slum within a slum. And it is this police that is charged with the task of eradicating the slums in the city!

A Sick Society

Ours is a sick society. Since violence is part and parcel of social degeneration the police have a vital role. In any free society, moreover, every single action of the police tends to get magnified. Usually, this also tends to disorient the force. There is also the view that India today is on the threshold of a class conflict and that the police are inexorably caught up in this process.

Whatever the validity of such a view, the time has come to undertake a detailed scrutiny of the working of the police in India and, as a first step in this direction, the *Weekly* initiates a national debate on the subject. To make the debate meaningful, it has requisitioned the services of a set of contributors representing an authentic cross-section. The attempt is to get to the heart of the social factors that have led to the brutalisation of the police forces in the country. On the face of it they are both the hatchetmen and the victims of an inequitous system.

One view is that it is the job that brutalises them, another that the force is brutalised because it has been politicised. Either way, the fact remains that the humane approach is lacking on the part of the Police and the Government alike The police force in Assam have miserably failed to cope with widespread violence in the State in recent weeks. Accused of fearful excesses, the 30,000-strong CRP is possibly the most hated force ever deployed in any State. The State Police, on the other hand, has virtually ceased to act. Their divergent behaviour shows how policemen both betray the system and are betrayed by it.

It is indeed time we turned the mirror inwards. Hence this debate.

Raju Bharatan

that is): the little jealousies and rivalries between them have in these recent events been... of great advantage to us" and so "it would be desirable rather to extend these differences to regiments." (emphasis added). The policy continues to this day.

Take the case of the fake encounters the police have staged with brutally monotonous regularity in Uttar Pradesh during the last three years in which, by a modest estimate, some 5,000 persons have been killed. Rare exceptions aside, it is invariably the people belonging to the backward castes (like the Yadavs and the Mallahs and the Harijan communities) who have been gunned down—and not because they were engaged in any criminal activity, but essentially because of the caste antagonisms that are intertwined with the class interests. What is more, exceptions aside, it is the upper-caste policemen who are responsible for these atrocities.

The Bhagalpur blindings, which shocked the entire world, were also a manifestation of these caste antagonisms. In this case, not only was the blinding of the "backward" communities by the upper-caste policemen, but one had the mortifying spectacle of the upper castes of Bhagalpur town holding public rallies in defence of the police who committed this heinous crime.

The killings of the so-called Naxalites in Bihar, Andhra Pradesh and Tamil Nadu bring out another aspect of police barbarism which is rooted in the caste and class conflicts that are currently rampant in our country and in which the Establishment is decidedly on the side of the upper castes and the moneyed classes. In these as well as in other States, it is the landless workers and the sharecroppers who are getting organised to assert their right to live. Their demands may vary from place to place. In Bihar, they seek a decent wage for the day's work and distribution of surplus land where it is available. In Andhra Pradesh, in Indravelli and in the Gond areas, they demand return of tribal lands to the tribals. These lands had been snatched from them by the *mahajans* and other communities with the active collusion of the State authorities. In Tamil Nadu, it is again a question of a fair wage or distribution of land.

In each of these and other cases, the state and its repressive organs are acting as the defenders of the status-quoist socio-economic order and, in the process, letting loose a reign of terror on those who are fighting for change. There is no need to emphasise that the killers mostly belong to the upper castes while those killed are Harijans and other weaker communities. The British legacy continues to be upheld by the successor Government.

True, this is not all there is to police brutalities. What about the Baghpat incident in which three young men were shot dead in broad daylight and the wife of one of them was stripped naked in the high street of the town and paraded? And then subjected to sexual humiliation? In this incident, the caste factor was, of course, not involved. But how does one get a man-eater to stop prowling in the countryside in search of human prey after his having been fed on human flesh since his cub days?

In the Baghpat incident, the highest in the country—the Prime Minister and her late son—protected the delinquent police officer in return for favours done during the earlier elections. A nation-wide movement—some 30,000 people courting arrest in Uttar Pradesh alone—and a lot more of police repression finally resulted in the appointment of a judicial commission to inquire into the Baghpat outrage, but it did not help in reforming the police.

The little village of Siswa—52 houses and some 400 souls—in the Basti district of Uttar Pradesh (hardly 15 km from India's border with Nepal) was the scene of the kind of police brutality on April 23, 1982, that defies description. Eight married women and at least an equal number of unmarried girls were raped and beaten up and the entire village was looted by policemen and the *goondas* who formed part of the police party that invaded the village. I visited this village, spoke to the affected persons (including the raped women), wrote to the Prime Minister and sought action from her—all to no avail.

Why? Because the police officer who organised this crime was acting on behalf of a local Congress (I) politician who had been defeated in the panchayat elections and who was trying to settle scores with the independent candidate, belonging to Siswa village, who had won. The police officer also claimed a close blood relationship with a junior Minister in Mrs Gandhi's Council of Ministers and it is a fact that that relationship had stood him in good stead in his earlier crimes against the people.

Sometimes, even innocent policemen are made pawns on the political chessboard—as happened at Narayanpur in Uttar Pradesh. No less a person than the late son of the Prime Minister, who visited this village in Deoria to have a first-hand view of what happened there, told the whole world that the police had raped every woman in the village in an act of reprisal for something the villagers had done to one of them. That was 900 women raped by some 30 policemen. Later, the Prime Minister herself went to Narayanpur and was quoted as saying that what the police had done there was unprecedented.

Between mother and son, Narayanpur became the peg on which the case to dismiss the Lok Dal Ministry of Banarsi Das was hung. And now the Judicial Commission that went into the facts has said that there was no rape, there was no atrocity; there was only some high-handedness.

Where Indeed!

So where does one start with the struggle to end police atrocities? It suits everyone to attack the policeman on the spot and, like Pontius Pilate, wash his own hands of all responsibility. But it seems to me that, unless the battle for social and economic justice is won, there will not be any way out of the vicious situation.

For, if the system that exploits the workers, the farmers and the artisans has to survive, if the social order that refuses to give equal status to those it has termed as *shudras* and untouchables for centuries has to be perpetuated, the state and the system need to have in their hands organs of repression in the persons of policemen.

AS PUBLIC PROPERTY IS BURNT and the police swing into action, they have to keep in mind all the time the Opposition politician who could accuse them of indulging in "excesses". The conditions in which Bombay policemen live near the Dharavi sector of Bombay have to be seen to be believed.

—MUKESH PARMANI

The Job Brutalises Them

STICK AT NOTHING: if that is the impression they give, it is because, in this profession, an achievement-oriented man is one who is a good hunter, who is willing to be brutal enough to fire bullets into a crowd. Under the present set-up, one who agrees to be a policeman actually agrees to abide by a system which legitimises the principle of punishment. Within a year or two of joining the force, the policeman becomes used to behaving like a brute.

Sheela Barse, in an on-the spot investigation, reveals how the wives of police officers are proud of their husbands for the way they beat up suspects!

THE sub-inspector, a short, fair, 26-year-old youth, broke open the door of the public toilet in the compound of a BEST bus depot. A stinking, worm-infested corpse lay crumpled on the floor of the narrow cubicle. The man had collapsed and died there four days back. No one had given a thought to the locked lavatory until a foul odour emanating from there aroused suspicion.

The young officer, who had joined the police force barely two years back, asked the dead man's colleagues to help him remove the corpse from the lavatory, but the men stepped back. Naturally: no normal human being likes handling a stinking, worm-infested corpse. The sub-inspector was feeling so overcome by a sense of revulsion that he wanted to retch. But he stepped forward, alone, dragged the body out in the open, turned it over to examine it for wounds or other possible evidence of unnatural death and then sat down to record it all.

A few weeks later, the same officer had to rush to the site of an air crash and help other policemen collect severed limbs, charred torsos, mutilated bodies.

> On that day, his eyes and psyche had been brutally exposed to the morbid sight of 52 corpses in various states of decomposition, some of them a mere assemblage of damaged parts.

Such unsettling, frightening encounters are not routine in a policeman's life; but they are not rare either.

What A Job!

We do not even care to acknowledge that a policeman's job constantly brings him in contact with abnormal situations, such as accidents in which bodies are crushed or maimed: street riots during which citizens are shot dead; violent encounters during which someone gets murdered and the body is slashed by numerous stab wounds; women with 90-degree burns whom they should be leaving alone but whose dying declaration they must take and then get the lady concerned to sign it with her burnt fingers.

The man has no time to be squeamish. At the end of the day, he does not care to react to the day's experience. He sits down to enjoy a meal...

Throughout the day, a police officer sees the wrong side of life. the worst aspects of human behaviour. Every now and then, he has to become a hunter of men. He has to hunt out a criminal, tighten the trap around him and see to it that he is deprived of his liberty, even his life. In this profession, an achievement-oriented man is the one who is a good hunter, who is willing to be brutal enough to fire bullets into a crowd or is prepared to arrange to get a man sent to the gallows. When an officer "wins" a death sentence for his criminal, the officer's colleagues congratulate him!

Whereas for most of us depiction of a man behind bars in a picture, a play or a movie is disturbing, a policeman works next to a room in which scores of men and women are locked in. Using his authority to deprive a man of his liberty is one of the most banal acts for a police officer.

Whereas for most of us depiction of a man behind bars in a picture, a play or a movie is disturbing, a policeman works next to a room in which scores of men and women are locked in. Using his authority to deprive a man of his liberty is one of the most banal acts for a police officer.

Society in its normative wisdom has glamorised this job by giving the officer an attire which represents the macho image—peaked cap adorned with a crest-cum-legend, stars on the epaulettes, ribbons that boast of every medal the chap has won. And the Government, in its economic wisdom, has chosen pay-scales and perks for the police officer that have no relationship with the nature and the demands of his work or the authority he enjoys. The Ruling Party, in its political wisdom, treats them, not as people's police, but as ruler-appointed police.

Under the present set-up, the man who agrees to be a police officer actually agrees to abide by a system which legitimises the principle of punishment; unequal allocations of rights and privileges; transfer of an offending citizen from his natural environment to the unnatural environment of jail; and use of violence to sustain law and order in society.

The police organisational leadership should provide for enough counter-checks within the organisational structure and in the working environment so that the constant submersion in cold-hearted, hard-headed choices does not brutalise the man. But, as a ruler-appointed leadership, it is worried only about budget limitations and about winning the approval of politicians.

Within a year or two of joining the police force, the officer becomes so used to behaving like a brute that he starts transgressing, guiltlessly, the line of legitimacy in "Governmental cruelty". He begins using violence illegally merely to assert his authority over the captive, to unleash his own frustrations, to extract information or simply to indulge his baser instincts. Torture in police custody, therefore, is as old as the police force itself. The First Torture Commission in India submitted its report to the Court Directors of the East India Company on April 16, 1855!

The ideal of a civilised society is to control, if not completely banish, torture. We Indians, especially, never tire of harping on *ahimsa*, compassion and the principle that the universe is an extension of one's family (*vasudeiva kutumbakam*). Yet, when I interviewed *educated* housewives who live in the vicinity of a police station and witness torture of an accused person, I discovered the unnerving and painful fact that illegal use of violence by the police has *social* sanction! Police officers, too, cynically tell one about well-known idealists who, the moment they become victims of theft or fraud, bluntly order use of third degree on the accused to restore their property to them.

I asked the wife of a police officer if she knew about the use of violence by officers. She excitedly told me how she, too, had a curiosity about custodial violence and her husband's role in it and had persuaded her husband's orderly to call her secretly to witness her man at work! "Unlike other officers, he uses the double-twisted rubber strip. Once he starts thrashing the poor fellow, my God, is he a terror! At the end of half an hour of relentless beating by my husband, the arrested man is finished!"

> She was impressed, rather than disturbed or alienated, as she saw her husband savagely assault an accused in custody

A Party To It All?

The officer's paymaster, the Government has shown no wish to curb custodial violence. Every time its police is accused of torturing captives, the Government has come to the defence of the men rather than revealed its displeasure at the continuance of such activity. It does not wish to cope with the problem of custodial violence frankly, as should be obvious from the terms of reference of the National Police Commission Examination of "the system of investigation and prosecution... the use of improper methods and the extent of their prevalence".

The officer knows that the Government does not disapprove of illegal custodial violence, that society joins him in finding justification for it and that his family sanctions it. In such circumstances, one wonders if the officer is not as much a victim of the brutality intrinsic to the system as is the captive who suffers barbaric torture at his hands.

Why The Force Is Restive

K.F. Rustamji feels that nothing better can be expected when the policeman has to be content with half the wages of the lowest in industry.

WHAT was the mistake we made that created police unrest? Looking back over the years since Independence, I can say without hesitation: *We did not prepare a rational and consistent wage policy, although we expected inflation and competitive demands.*

True, we had Pay Commissions for the Government services that did a fair job. But that, in a poor country, *all* can show that they have a just demand. In the end, we produced a wage structure in which:

Those who threatened the most disorder got the most, irrespective of whether they deserved it or not.

We stunted the growth of high-initiative industries for which men of outstanding creativeness were required. They could not be attracted by the wages offered. They sought foreign assignments and drifted away from the professions and the industries in which they were badly needed.

We made the unorganised rural sector pay for all the satisfaction that we had to give to the vocal urban sector. In consequence, we impoverished the villages, giving them less than they deserved for their products and selling them their needs at inflated prices. *Blessed are the meek: for they shall inherit the earth...* To this we ought to add: *...not in a democracy.*

We produced, in the bargain, discontent in the police forces which had to deal with industrial agitations that created disorder with an eye to securing wage increases.

Yet the policeman had to be content with half the wages of the lowest in industry.

Additional causes of discontent were the special terms given in some States, which made the Central Forces (like the Central Reserve Police) underpaid in comparison with those who had raised slogans.

The worst feature of our *ad-hoc* wage policy was that uniformed men (like those in the police) have become convinced that good behaviour and discipline lead only to neglect. Stay unorganised and unnoticed and you will be reduced to the condition of the rural poor—pitied but not helped.

Nationalisation Benefits Lost

Most of the benefits of nationalisation have been lost to the country as a whole because of lack of a progressive wage policy. Those in nationalised units have improved their lot unfairly—the rest of the country has never got what nationalisation promised.

To compound it all, we allowed black money to grow to such an extent that a new class of maharajas is thriving solely on its ability to dodge taxes—and inflation mounts unchecked.

You would be wrong if you thought that all this mess had gone unnoticed by the policeman. Indeed, if we discuss matters with him, he is as caustic as any worker anywhere about the way he has been treated.

One concession was indirectly made by the Government. the police could make up what they needed by corruption. The Civil Police soon found their grazing ground. That left out the Armed Police standing guard in treasuries or banks, dispersing violent assemblies, protecting VIPs and doing many vital jobs. They became the discontented leaders of all police agitations.

In plain words, the real cause of police unrest is violent envy of all that has been achieved by trade unions—together with a deep distrust of the ability of their officers to obtain redressal of their grievances from the Government. Naturally, when you are envious and incensed about one wrong, hundred aches and pains cry out fo attention.

As the pressure of population and over crowding increased, the duties of the police also grew—almost tenfold since Independence. Each man had to work longer hours (1 hours normally) and commute longer dis tances (forgo all Sundays and holidays, eve leave, which was often banned because of festival or a riot). Then, in 1979, whe concessions were given regarding leave, n extra strength was added, with the result thc the workload of those men who were on dut increased. The policeman lived in a hut (in *jhuggi*), ate scantily or scrounged meals her and there. His children roamed the street uneducated, unemployed.

Everyone, most of all the nation's press sympathised.

However, the political parties generall paid only lip service—they largely kept awa because police *karamchari* leaders were u decided whether they should take their hel or not. In the end, very few of them went t political parties. Some of them moved clos to trade unions.

Growing Discontent

Each time there were signs of unrest in th police, a committee or commission wc appointed—after numerous attempts hc been made to avoid appointing it. The rank felt that at last *something* was going to b done. Then, when their patience was near exhausted, the report appeared and th police were blandly told that implementatic would be postponed because discipline hc "returned" in the police!

The leaders of the police agitation called deception. The rank and file were furiou that they had been deceived and some polic officers (*neta* types) found this a wonderf opportunity to play on sentiments and shou *Unite or you will be crushed!*

Whether it was Delhi, Lucknow, Chand garh, Madras or Bombay, the agitation unrest took the same course. Disappointe and deprived of any hope, the men began search for alternatives. What to do? Mou an agitation which would lead to the di missal of those who were elected leaders just sit quiet and accept defeat?

Eventually, the younger and the mo militant lot won the day. *We must ac* they said.

The moderates disagreed. And they d cided on a compromise. They would act such a way that the courts would relea them on the ground that there was n evidence! Trust a policeman to find a leg remedy.

The worst feature of our *ad-hoc* wage policy is that uniformed men (like those in the police) have become convinced that good behaviour and discipline lead only to neglect. Stay unorganised and unnoticed and you will be reduced to the condition of the rural poor—pitied but not helped.

While the agitation was still in a subdue form and the leaders were trying to find som way of moving in a manner which would no alienate the officers, some of the men los self-control. An officer was booed when h tried to address the men because he prac tised open corruption and preached stri discipline. Somewhere a *chamcha* inspecte was not saluted; or an officer who deployed the men only for his personal insurance against criticism, regardless of hours of duty was informed of the disapproval of the rank in numerous anonymous letters.

THE INSTINCTIVE REACTION a policeman evokes, even today, is one of fear. The author makes an impassioned plea for humanising the force. "If anyone thinks that disarming, dismissing, dishonouring or prosecuting policemen will make them work with devotion to duty and steadfastness under stress, that person has no conception at all of the motivation of men in a difficult service," he concludes.

—CHANDU MHATRE

All these are normal incidents in any force, but collect them together and they add up to an alarming breakdown of discipline.

"Discipline is being ruined!" an officer says. "The constabulary are planning to shoot us!"

An agency picks up such *gup-shup* and dishes it out as a "story". (It is called an intelligence report.)

All this is preparatory work for the crackdown. The taking over of the armouries, the arrest of their leaders, the criticism in the press, the statements of Ministers—all this the policemen accept as their *kismat*. "How to explain what happened?" they moan. "We'll never let the country down but, for God's sake, listen to us.".

This, broadly speaking, is the policemen's lot and such is the ability of the Indian to accept what appears to be inevitable that the majority of men curse their fate and decide to lie low. A small minority, feeling that the officers have crushed what they called the revolt, try to gain quick promotions and send letters supporting the crackdown—to try and cash in on the disaster.

In the mind of every single man in the police force, there is a mixture of resentment and disgust ("In spite of it all, we will do our duty") and all those officers who have the big responsibility of maintaining law and order wonder how they will recreate that *esprit de corps* which is the ethos of every first-class force.

What is the way out?

First, we must not play the fool with uniformed men, promising a detailed examination of their woes and then, when a Commission's or Committee's report is received, saying that it will take years to study; and only a small part of it will be implemented.

Second, if we want to take a long-term view, we must form a concrete wage policy for all sectors.

Thirdly, we must take the police out of the purview of Pay Commissions because, in essence, the force has a place of its own in society which cannot be equated with white-collar workers. If you want to keep the union out of the police barracks, you must be able to show the inmates that their interest will be looked after without it.

Lastly, if anyone thinks that disarming, dismissing, dishonouring and prosecuting policemen will make them work with devotion to duty and steadfastness under stress, he has no conception of the motivations of men in a difficult service. No, none at all. ■

The Anatomy Of Corruption

P.K. Ravindranath draws attention to the fact that, when a Sub-Inspector has to pay anything up to Rs 50,000 for his selection, he naturally counts on the "wide" avenues open to him to make good, within the shortest time possible, the amount paid out.

CORRUPTION among policemen is much greater than in most other branches of the administration. But, as elsewhere, it is a true reflection of the corruption prevailing in the ruling elite.

The proper working of the rule of law depends on the political process: on the interaction as between the Government of the day, the various agencies involved in the execution of its policies and society at large. Two widely reported incidents in recent times vividly illustrate the point.

The Rajgir Police in Biharsharif, on October 17, 1982, arrested one Y.G Sinha for running a parallel police station in the remote areas of Biharsharif and for posing as its "officer-in-charge". The bogus officer-in-charge ran his "police station" for over a month, using police outfit and seal, along with "one assistant sub-inspector, four constables, two havildars and three women constables". He extracted tolls from shopkeepers and truck and bus owners of the area.

A 28-year-old sub-inspector of Bombay, Vijay Deshpande, resigned on January 25, 1979, after depositing in a bank the bribes that had been given to him on various counts. He resisted the offer of bribes for a long time, but was ultimately persuaded that it was "part of his assignment". On the advice of the veteran Socialist leader, S.M. Joshi, he began depositing the amounts so received in a bank. Deshpande's conscience did not permit him to continue the practice for long. He resigned after making a clean breast of the extent of corruption within his personal knowledge.

Tip Of The Iceberg

These incidents, however, only reveal the proverbial tip of the iceberg.

In Maharashtra, as in Punjab, postings to police stations of one's choice are auctioned. In many States, the appointment of senior police officers in the districts is always a political decision. There is often a kickback involved in such postings. Senior inspectors often have to pay fancy prices for postings to "remunerative" stations where illicit distillation and colonies of bootleggers, smugglers' hideouts and loading points, unlicensed brothels and gambling dens flourish. The bids at the clandestine auctions for postings to such police stations in the main cities vary from Rs 10,000 to Rs 1,00,000.

Almost all police stations have a regular income from the underworld. There are the occasional bribes and the *haftas*—the regular weekly or monthly payments. Occasional payments depend upon the gravity of the offence and the capacity of the offender to pay.

> It is common knowledge in Bombay that a few years ago, during the regime of a particular Home Minister, a senior journalist arranged for the transfer of senior police officers from one station to another—for a price. The Minister himself collected his share of the booty at a petrol station owned by a close relation.

On March 27, 1980, a breakaway group of the Shiv Sena in Bombay played a tape-recording to journalists of a conversation they had had with top police officers who demanded Rs 5,000 to allow a brothel to be set up in a busy locality. They said one policeman offered protection to several centres for the sale of illicit liquor and activities connected with *matka* gambling and prostitution.

The regular fixed sums, collected between the 3rd and the 9th of every month, vary with the capacity of the payer and the greed of the collector. *Matka* Kings of some of the suburbs pay as much as Rs 10,000 every month to the local police station.

Small-time shopkeepers and restaurateurs who often violate minor rules or licensing regulations, pay Rs 50 a month and serve free food to all constables and even officers of the local police station. The *hafta* is generally collected by a havildar each month from bootleggers, *matka* operators, brothel keepers, smugglers, hotel owners (who allow prostitutes to operate from their premises or break permit laws), adulterators and sundry illegal operators. For the hardened criminal the fear of apprehension and conviction is no deterrent. He knows how to buy his way out even when caught.

S.K. Ghosh, former Inspector-General of Police, Orissa, in his book, *Indian Police At Crossroads* (1975), says:

> *Men who pay and 'pull' to be promoted or to get an assignment of their choice are going to get their money back—and they are going to look more to those who 'pull' for them than to the Police Chief. They can do just enough to keep within the rules and escape punishment and, if the Police Chief punishes them, the Government and the courts will very soon relieve them.*
>
> *There are other minor instances of corruption which no one seems to mind. Police officers, particularly senior ones, often use facilities like transport, guesthouses and hospitality offered to them by owners of factories and industrial enterprises. It is against the Government Servants' Conduct Rules for them to do so. But who cares?*

Rs 50,000 Kingpin!

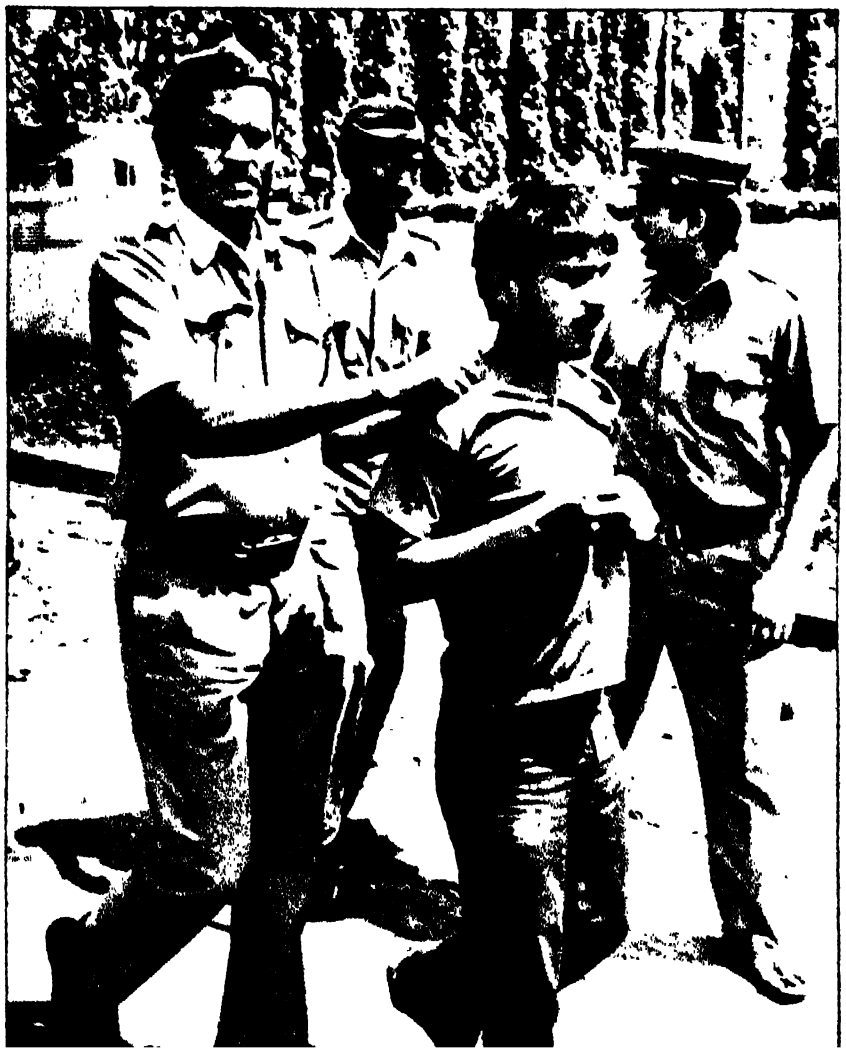
The sub-inspector is the kingpin of the force—particularly at the district level—with well-defined functions and responsibilities. At higher levels, the officers are purely inspecting officers with hardly any defined functions or responsibilities.

The duties of a sub-inspector include the administration of a police station; crime prevention and initial action under the preventive sections of the law; investigation of offences; service of processes issued by courts of law; liaison with courts, jails and other local offices; collection of intelligence; *bandobast* at fairs, processions and at election time; watch over antisocial elements; checking licences for hotels, public places and arms; and enforcement of social legislation.

> When a fresh sub-inspector has to pay anything up to Rs 50,000 for his selection he naturally counts on the "wide" avenues open to him to make good the amount paid out—within the shortest possible time. Once this practice is initiated, it becomes a habit. Most Station House Officers live in a style far beyond their means. The general explanation is that they have married into "well-to-do" families.

Crime prevention, investigation and collection of intelligence and the handling of law-and-order situations call for a lot of tact, extensive contacts, powers of persuasion, foresight, planning, patience, endurance and the ability to take quick decisions. These qualities can hardly be found in the sub

CONSTABLES MAKE UP nearly 70 per cent of our police force of 900,000, and over 80 per cent of the constables retire as constables. No wonder there is so much corruption in the force, since so many have so little to look forward to in terms of advancement in life.



MUKESH PARPIANI

inspectors who, as often as not, "buy" their jobs.

Can matters be ever set right? The police has been known to be corrupt and inefficient since it emerged as an organised force in 1861. As many as 14 Commissions of Inquiry, besides the National Police Commission, have gone into issues concerning policemen in various States, but their recommendations remain largely unimplemented. Every Police Commission has come up with ideas for improvement: weekly offs; regular working hours; and decent living conditions, particularly for the constabulary. But so far to no avail.

Nearly 70 per cent of the police force (of over 900,000) are constables and another 7,000 are Inspectors and Sub-Inspectors. At the top are over 1,300 Inspectors-General, Deputy I-Gs and Superintendents; and 3,000 Additional Superintendents and Deputy Superintendents, who join the IPS via a competitive Union Public Service Commission examination. Over 80 per cent of the constables retire as constables, at best as Head Constables.

> The police, in theory, are accountable to the law but, in practice, their loyalty is to the party in power. But both the law and the administration often appear to be distrustful of the police.

The police still remains an instrument of the Government—rather, the Ruling Party. The Shah Commission emphasised the fact that the police is subject to political pressure, because its control is in the hands of a few politicians. So long as the politician is corrupt, the police, too, will remain corrupt.

Drastic Changes Needed

If the police are to work in accordance with the Rule of Law, drastic changes will have to be made in their attitudes; approach to problems and people; legal powers and procedures; accountability and control. They should be able to resist pressures to act illegally—even from the highest quarters.

The National Police Commission, in its First Report in February 1979, stipulated that the working conditions of police constables must be improved immediately. The Commission recommended the British practice of paying policemen a little more than a skilled industrial worker to compensate him for professional hazards. This recommendation, like most others, has remained on paper.

The London Bobby enjoys a high status, because he is a Crown officer and not an appointee of the Government in power. In 1861, the British were content to recruit their constables from the lowest cultural and economic rungs of society—on the lowest possible pay. The levels of recruitment have remained the same.

The policeman has perforce to be in constant touch with the most disagreeable elements in society. And, at the top, he is controlled by politicians whose reputation and actions are hardly more inspiring. ■

Crime Control Is No Picnic

P.R. Rajagopal approaches the problem from the angle of the social scientist and points out that, in the absence of suitable recreational facilities, our youth have no opportunity to let off steam, which manifests itself in violence.

POLICING an urban society is becoming increasingly difficult. An urban society is composed, not of one "public", but several "publics" whose demands and expectations are often in conflict or at variance with one another. What the public expects of the police varies from group to group and area to area. For example, what the student community expects of the police in terms of inaction during their college election campaign is often in conflict with what the law-abiding citizen expects of the force at the same point of time.

Colonies and slums proliferate with the expanding urban population and the police is often slow in catching up with its expanding and demanding responsibility. Often, plans for the expansion of existing townships and location of new ones do not take into account the need for a logical and legitimate place for the police. This produces problems which could easily have been avoided with a little foresight and imagination. People inhabiting these new townships are often oblivious of the need for police protection until such time as the local bully starts his pranks or the neighbourhood desperado commits a serious crime in the locality.

Many new colonies in Delhi—and other metropolitan cities as well—do not have an adequate and effective police cover. This is to be expected as long as the police is not seen as an integral and important component of service to the community. The police has to be, and must be, allowed to evolve with the life of the community in its multiple aspects.

We seem to have got into the habit of superimposing a police cover in the fast-developing, and very often unplanned or poorly planned, colonies only when it becomes completely unavoidable. Even then, the police charged with the responsibility of maintaining order and preventing crime is woefully understaffed, poorly housed and indifferently supervised.

> The point that is being sought to be made is that one of the inevitable concomitants of unplanned urbanisation and *ad-hoc* expansion of towns and cities is a thin police presence with little or no policing in the real sense of the term. This naturally takes its toll in terms of the security of life and property of the citizens.

Who are these people adding to the existing lakhs and millions in cities? Among these, a small segment is constituted by the elite and the affluent, while there is a very high percentage of those who constitute the several services that are the inseparable adjuncts of a modern urban life: vendors, domestic servants, construction workers, industrial labourers, artisans, the service class and so on. Most of these people have gravitated to the urban centres in search of employment or in the hope of finding fresh avenues for their trades and crafts. These people seldom find ready employment or minimum and cheap shelter.

It Confers Anonymity

City life confers anonymity on the individuals migrating from a rural background and loosens impulses and instincts which had, otherwise, been lying dormant in them as long as they were in the close intimacy of community life. The denials and the deprivations which these people undergo in cities create, over a period of time, their own logic—however fallacious—and their inevitable compulsions. If there is a rationale or justification for not adhering strictly to the moral and ethical code engendered in them by the strict social sanctions of the rural community life, there are conditions in the urban setting which are contributory to, if not exactly conducive to, an apparently easy life of petty crime. Graduating from petty to more serious and professional crime is merely a matter of time, given the constraints under which the police functions in the cities.

The exodus from the rural to the urban areas understandably swells the ranks of the slum dwellers about whom there is hardly any worthwhile information in the police records.

Recently, talking to the Commissioner of Police of one of the metropolitan cities, I was told that the greatest threat to the security of life and property in the urban areas came from the proliferating slums since the police have no records of the slum inhabitants. According to this Commissioner, even if one of the inmates of these slums is apprehended for an indictable offence, prosecuted and convicted, the police loses track of him as soon as he returns after the completion of the jail term. The convict shifts his abode and merges with the people in a new slum—and is lost to the police until he gets caught again through his own inept action or because of a smart and vigilant member of the public, but very seldom due to the designed efforts of police investigation.

This admission, coming as it did from an officer who is considered professionally pre-eminent, has its own relevance. The logical conclusion that follows is simple in the extreme but very difficult to accomplish because of the political mines that lie packed on the path of any such effort. The conclusion is : *Can we dissolve the existing slums irrevocably and prevent the formation of new ones?*

→

DEALING WITH INDUSTRIAL VIOLENCE calls for exercise of the utmost tact on the part of the police.

The urban planners hold the key to this question. The formulation and the effective implementation of their policies and subsequent action will determine whether or not the urban centres of tomorrow will be bearable and livable places, where the incidence of crime and criminality is an occasional event instead of an endemic phenomenon.

Research and interaction with people living in multi-storeyed flats have revealed that these people (particularly the adolescents and children) suffer from tension and repression inevitable in an atmosphere of curbed and controlled emotional reactions. In the absence of suitable recreational facilities, the youth have no opportunity to let off steam, which ultimately manifests itself in the form of violence. Living a lonely life in the midst of crowds that people apartments, the most important casualty is community life which encourages tolerance, mutual help, shared joys and sorrows. Children grow up with little or no respect for the community members and think nothing of insulting their elders, molesting the girls or stealing the cars in the neighbourhood.

Treating crime and criminals as the sole and exclusive responsibility of the criminal justice system—which itself is a combination of jail, police and courts—is to take only a sectional view of this complicated phenomenon. Crime levels do not depend only on these: it all has a lot more to do with the agencies that take a hand in shaping our social and physical environment, such as housing, education, recreational facilities and the like. There is a definite and demonstrable nexus between social and physical planning and incidence of crime and one is surprised to note that the police is treated as a non-Plan subject by the Planning Commission.

What has already gone ahead cannot be helped. But can we not, even now, recreate and reform our various planning bodies in a manner that will give the police its legitimate and necessary place in these forums as a catalyst for social change, if not as a coordinator of the functions of the different agencies?

> The role of the police is becoming more complex and is no longer limited to crime control and maintenance of law and order. While maintenance of order is an item which the police has discharged with a degree of credit (except for occasional lapses), controlling crime has not been for it a picnic. There is a lot that the police can and should do, and are not doing, in dealing with crime, whatever may be the rationalisation behind it.

Having said this, it also needs to be noted that this function can be effectively fulfilled only if the Judiciary, which is one of the most important components of the criminal justice system, discharges its share of the job with speed and understanding. In Delhi alone, there are thousands of criminal cases awaiting disposal in the courts for over five years. What kind of disposals will these cases get if and when they do get disposed? Unless the Judiciary plays its vital role in a more purposeful and prompt manner, conditions born of uncontrolled crime and unpunished criminals will only make a bad situation worse.

On the social service aspects of the police, I can do no better than quote from the *UN Congress on Crime Prevention and Treatment of Offenders* (September 1975, Canada):

> *The role of the police should be crime prevention and a better recognition of the social service element of police work, such as advice to individuals involved in petty conflicts without taking recourse to arrest and prosecution; advising citizens and business establishments on security matters; helping in tracing missing persons; counselling youngsters who might get into trouble; rendering assistance to the stranded, etc, so that the image of the police as the friend of the people gets firmly established.*

The police in India has a long way to go before it can fulfil all these expectations that the public has with regard to its duties. In the mean time, it would facilitate matters if the police of our country can be suitably trained and oriented to the goals. Alongside, social and urban planners need to display the required degree of awareness with regard to the role of the police in their scheme of things.

While conceding that the police is a service like any other social service, it needs to be realised at all levels that, because of the special and exclusive role it is called upon to play as the *only* agent for enforcing law and the concept of equality before the law, it must have an inherent freedom of action which can be subject to no manipulation. This is the essence of impartial and just policing which would brook no interference from any political authority. Can we ensure this?

The Munir Inquiry Committee constituted to inquire into disturbances in Punjab in 1953 concluded its report with the words:

> *But if democracy means the subordination of law and order to political ends—then Allah Knoweth Best and we end the report.*

The Police Of Tomorrow

THE TASK OF TODAY'S POLICE has become an extremely difficult one and it will, if anything, be much more difficult tomorrow, says the author

MUKESH PARMANI

Dharma Vira, as the Head of the National Police Commission, is uniquely placed to discuss what should be done, not only to improve the present force, but also to create an ideal force for the morrow.

THE main and basic functions of the police in India, as embodied in the Police Act, 1861, are:

1. *Maintenance of law and order.*
2. *Prevention and detection of crimes.*

These are the primary duties of the police—not only in India, but all over the world—and it has to be so. Unless law and order is maintained satisfactorily, no society can survive, much less develop and prosper.

The nature of the police duties, however, would differ from society to society. In a primitive society, the policing would be simple and routine.

The same, however, will not be the case in a developing society. A developing society usually is impatient and intolerant. It always has a feeling that it has already lost time and should make up for it expeditiously. Such a society has new visions and aspirations and resents delay.

Today's Indian society is in this phase. The foreign yoke has been shaken off and the people are on the march to national rejuvenation. The Constitution has given them added hope by resolving to "secure for all its citizens justice: social, economic, political". It has given them the right to equality of opportunity in the matter of employment and a right against exploitation. The Directive Principles, enshrined in the Constitution, though not justiciable, have assured that the state shall direct its policy so as to secure an adequate means of livelihood to everybody; equal pay for equal work;

resistance in the event of unemployment. And our country has started on the difficult but determined path of socio-economic progress, in the process adding new dimensions to police problems.

Accent on industrialisation has led to urbanisation and a "pull" for the rural population to shift to cities. The urban economy, however, has not been able to generate employment potential, nor accommodation, nor other amenities commensurate with the inflow of migrants. Slums have developed in all important urban areas and these, combined with the disappointment and frustration generated by rising unemployment, have given much impetus to crime. With growth of education and technology, crime has become much sophisticated and is no longer confined to the rank of old hardened registered criminals. In fact, it has percolated even to the well-to-do young people. All these developments have added considerably to the work and the responsibilities of the police.

Rising Murder Trend

Greater mobility of population and its contact with "modernity", coupled with a diminution in social controls and increase of anonymity in the impersonal urban surroundings, tend to escalate criminality. The gravity of offences has also increased, making matters more difficult for the police. There is growing use of firearms and bombs in acts of violence, resulting in a rising trend in the number of murders.

Industrialisation, understandably, has led to formation of numerous trade unions. In 1955, there were 105 Central Trade Unions with a membership of 2.13 lakhs. They grew to 452 by 1969, with a membership of 9.81 lakhs. Agitations, lock-outs and demonstrations (very often violent) have become practically an everyday affair, posing perpetual, highly sensitive problems for the police.

Progress on the educational side has simultaneously resulted in pushing up literacy. The student population has more than doubled. This has also led to a larger educated population of the unemployed. Industries have not been able to generate employment for the ever-increasing numbers of the educated. There is also a growing atmosphere of indiscipline and violence in the air. Education is no longer the aim of the young people. General dissatisfaction with the way of things, and expression of the same through violence and confrontation, have become the order of the day. In this, unfortunately, the political parties have taken a big hand for the furtherance of their short-term political ends, without regard, in the process, to the consequent development of retarding, in fact befouling, the future growth of our country. More universities in the country are closed today than open.

Then there are economic and social crimes, such as smuggling, food adulteration, blackmarketing, gambling, the Anti-Dowry Act, and the like. Prohibition, if enforced throughout the country, is likely to add a new dimension to crime in India.

These and a host of other problems of an entirely new complexion have been created by the developmental processes of our society. That, I believe, is the position in other similarly placed countries.

Nelson's Choice

All these are not basic law-and-order problems. They pose a new question about the police role. Should the police intervene and, if so, at what stage and in which manner?

Take the case of disputes between labour and management. If these disputes are allowed to linger, they may degenerate into a situation which may result in loss of life and property. But, if the police is to intervene initially, will that not be construed as putting unwanted constraints on the bargaining potential of labour? In either case, the police might come in for criticism. A real Hobson's choice.

The same would apply to the cases of student trouble. Should the students not have the right to express their resentment against the conditions obtaining in the universities and in the country? Should they not make a grievance of their bleak prospects of employment? Perhaps they could. But the allied question is: Should the police intervene? If it should, then at what stage: when the trouble is brewing or when violence has become imminent or has actually taken place? Will the police, in such a situation, not be characterised as Nero fiddling while Rome was burning? Should the educational premises really be treated as something sacrosanct and inviolable? Are the cases of student crimes (such as violence, arson and senseless destruction of university and public property) not to be treated as crimes at all?

The choice before the police is obviously extremely difficult and clear guidelines are wanting. It may be because the problems admit of no clear-cut solutions or there is ambivalence in the quarters that should guide.

What, however, has been stated above is only a revised version of the traditional role of the police as a law-and-order agency. In the context of socio-economic development, the police have to make a yet more difficult choice. It has to be decided if they should only maintain law and order—and thereby make the socio-economic development possible without disruption—or they should participate as active agents in the socio-economic development. Should the socio-economic legislation give police cognisance of breach of the penal provisions or not? Such laws will generally be of three types:

(a) Laws to combat certain evils that have crept into society;

(b) Laws for upliftment of the weaker sections of society; and

(c) White-collar crime.

The first type of laws would include things like legislations against dowry, child-marriage prohibition, prostitution and pornography. These offences do not usually command wide public acceptance.

One could argue as to how the age at which a child should be married could be the concern of the Government. One could plead that one should be free to choose one's own drink, soft or hard. Why should the state step in?

Similarly, settlement of dowry would appear to be a matter between two contracting parties. How are the interests of the state jeopardised if dowry is demanded and paid?

The Question Before Them

The question before the police is: Should it have any role to play in the enforcement of such social legislations? In fact, one thinking is that such legislations should be the concern of the social/specialised organisations and the role of the police should be confined to that of helping, if any law-and-order situation is likely to develop.

The task of the police, as it is, is not a popular one. Should the police be exposed to a direct confrontation with the people in the enforcement of these Acts and thus risk becoming more unpopular than is absolutely necessary. Further, the amount of work involved in the enforcement of these laws is so heavy that it comes in the way of the discharge of its basic functions. Is such a development desirable in the context of the worsening crime situation in the country?

Laws of the second category are intended to ameliorate the conditions of the weaker sections of society—a section which has suffered over the centuries through social discrimination and neglect. They have as much a right to prosper and advance as anybody else but, because of the handicaps and hindrances created by the more privileged classes, they cannot march ahead by themselves, unless they have some protection. The affluent, commanding economic power (as experience has shown), try to frustrate the Government's efforts for their amelioration.

Take the case of distribution of land to the landless. Generally, those who were given land have been dispossessed by others or have forcibly not been permitted to take physical possession of the lands allotted to them. Enforcement of such laws would thus clearly indicate the need for an enforcement agency. Should it not be the job of the police to provide the muscle so that such laws could be enforced and the desired results achieved?

'White-Collar' Crime

Economic development unfortunately everywhere has generated and nourished what is termed "white-collar" crime. An economic offence has been defined by the Law Commission as an offence which affects the economy of the whole country. These offences involve highly technical investigations requiring an intimate knowledge of the departmental rules, procedure and practices. There can be no doubt that all such offences should be investigated, but the question to be examined is whether the police should do so or the relevant departmental agencies who have the necessary background. Smuggling is being tackled by the Central Customs and the Excise Department, income-tax avoidance by the IT authorities and foreign exchange violations by the Directorate of Enforcement. Should there be similar other departmental agencies to look after their own problem?

The police, it must be clearly understood, is the strong arm of the law. It is its unambiguous duty to enforce the law of the land. In this matter, there can be no exception and, if exceptions are made through reasons of political or administrative expediency, they can only result in contempt for law and in confusing and demoralising the police force. Whilst the police cannot be unaware of or oblivious to the socio-economic problems of the country, yet it must be remembered that it is not a social welfare organisation. The task of social welfare belongs to other organisations

The police can only maintain a sympathetic attitude to the aims of these organisations and its duty is to come to the help of the organisations when any law-and-order situation is likely to develop. It has to be left unfettered to decide when it should intervene—it should not be inhibited from performing its duty because of directions based on extraneous considerations.

It is important that this position is clearly understood by the police as well as by every body concerned with these matters.

The task of today's police has become an extremely difficult one and it will be much more difficult tomorrow. To tackle this task efficiently, we need a well-equipped and modern police force. Unfortunately, not much thought has been given to this very important matter and the police in India continues to be neglected. We have allowed the conditions to continue which prevailed when our country was under the British Crown and have made no attempt to re-tailor our police to meet the needs of a democracy.

Some ignorant people consider expenditure on police to be unproductive. They do not realise that, without law and order, there can be no progress in the country and hence expenditure on creating an efficient law-and-order machinery is highly productive and not unproductive.

The police, to deal with its problems of tomorrow, has to be a highly organised, efficient and motivated force led by men dedicated to the service of the country. We have lost over 30 years by not doing anything to create such a force. There is no time left to neglect this pressing need any more, because such neglect can only result in great danger to the development and the progress of our country. ■

Young Entrepreneurs—III

The Piramal Phenomenon

Hashim Khairullah who interviewed Dilip Piramal says the industrialist *does* represent the third generation of "trained" tycoons heading the empires established by their forefathers. However, Piramal's entry into the plastic industry and his subsequent record proves that he can hold his own even in an independent venture.

AT 33, Dilip Piramal has a lot to be proud of. Ten years ago he took over Blow Plast, a company awash in red ink and adroitly turned it round into the world's third largest manufacturer of moulded luggage. Its turnover has shot up from Rs 7 crores in 1973-74 to Rs 21 crores. It now controls almost 60 per cent of India's Rs 43-crore-a-year moulded luggage market. It made a net profit of Rs 50 lakhs. (Shareholders have reason to be ecstatic with Piramal: for the last two years his company's been declaring dividends at the rate of 25 per cent).

Dilip Piramal also heads Morris Electronics Limited, the largest manufacturer of ferrites in the country. And as if this were not enough, he is also the Chairman of Kemp & Co Ltd which runs a chain of popular retail stores in Bombay, Delhi, Calcutta and Madras.

Piramal belongs to the new breed of younger entrepreneurs—the third generation of "trained" tycoons who have been ushering in near-revolutionary changes in their family-owned enterprises. He is fairly representative of the "young inheritors": confident, well-heeled and trained. His grandfather made a fortune in the cotton trade and bought a mill which grew into the Morarjee Goculdas Spinning and Weaving Mills under the stewardship of his father, the late Gopikisan Piramal. At 20, after taking a commerce degree from Bombay's Sydenham College, Dilip Piramal "walked" into a director's chair in his family mill. But his pioneering entry into the plastic industry and his subsequent record amply prove his blood lines.

In a two-hour interview at his tastefully appointed office at Prabhadevi, Dilip Piramal talked on a variety of topics—the Union Budget, the VIP success story; his strategy for success, his competitors, and the "problems" caused by the vagaries of government policy. Excerpts:

The Union Budget: "Before I give my views on this year's Budget, I would like to make a few observations of a general nature.

The Budget is an annual feature and not a very long-term plan. It is part of the overall fiscal policy of the Government. Hence, it should be treated as only one part of the long-term plan. However, in our country, every year there is a lot of speculation and apprehension about what the Budget is going to bring. This is because the Government is not very clear about its fiscal policies. Every Annual Budget is supposed to be a grand plan to remove inequalities, ensure growth and control inflation. What we really require is an Economic Plan which will hold good for at least five years and the Annual Budget should just make minor changes within this economic plan.

How can industrialists and businessmen make their plans if the Government itself is not very clear about its plans? The tax on zero-tax paying companies is a case in point. Many companies had worked-out their cashflows and investment plans on the basis of tax incentives given by the Government. As a bolt from the blue, they now find themselves having to pay tax on 30 per cent of their incomes, which would have otherwise been totally available to them.

Take another case. In 1978, the Janata Government introduced a 15 per cent disallowance on advertising expenditure. This was repealed by the Congress (I) Government in 1981. Now the very same Government has re-introduced this measure with a vengeance, adding all travelling expenditure in addition to advertising expenditure and increasing the quantum of disallowance from 15 to 20 per cent.

One would not grudge so much the increased rate of tax as the taxing of enhanced artificial income as against income which is measured on the basis of trading and commercial principles. The creation of wealth is further discouraged by making the corporate sector pay tax on 30 per cent of its income notwithstanding that in reality there is no tax liability.

On the other hand, it seems that the Government has understood that there is no further scope to increase the excise duties on most consumer items. In fact, there is a strong case for reduction in excise duties (which has been done in a few cases and shows that the Government is not beyond taking such a measure) which will generate more demand and thereby increase industrial activity. Government has to transform this country from a low volume, high tax economy, to a high volume economy with a reasonable level of taxation (low tax being unthinkable today)."

Take-Over Of Blow Plast: "When we took it over in 1973 (for Rs 24 lakhs) the company was in a financial mess. Its main line of business, the manufacture of PVC footwear, was taking a beating from the innumerable small-scale PVC manufacturers. Footwear sales, which accounted for 80 per cent of the company's turnover were falling dramatically. A management crisis was rampant.

No one had control, the finances were strained. It had made a modest venture into moulded luggage but then it was an uncharted area. The production lagged at only 10,000 pieces a month with virtually no marketing or distributing network. And it wasn't making profits. Moreover, sales-tax avoidance, labour unrest and high production costs plagued the operations. In 1975 we decided to close down the PVC footwear and concentrate on VIP moulded luggage which, apart from being a high technology item, held out great promise." (It has been more than fulfilled.)

"Consolidation started with a big bang,' says Dilip Piramal. "The infrastructure at the Nasik plant was strengthened and the management invested huge sums of money in the latest machines and modern technology. Skilled manpower was employed at all levels and the existing range of luggage was slowly expanded. Besides the Classic range, VIP has now added three others: Travelite, Jetstar and Solitaire. A sound distribution network was created to further strengthen the marketing set-up."

"The sustained efforts paid rich dividends. The distribution outlets increased from 500 to 2,600 and VIP, a brand leader in India, has now gained worldwide acceptance in over 55 countries. From 10,000 a month in 1973, we now produce over 100,000 pieces a month. And from a sale of 10 million when we started, we are now selling luggage worth Rs 210 million," says Piramal. "This was possible only because of high technology and sophisticated machinery, continuous updating of know-how, product development and strict control at every stage of production. That is how VIP today spells class any where in the world. Despite the inflation—nearly 200 per cent in the last 10 years—we have maintained price control. The philosophy of high volume and low profits always pays in the end."

Competitors: "They are good enough to keep us on our toes, both Safari Sales and Universal Luggage. Aristocrat is bigger but is actually a Blow Plast old boys club. Safari is more competent than Aristocrat, though its turnover could be increased. But even together the two don't pose a serious threat," asserts Piramal confidently. "Its good to have competition or we might tend to become complacent. It is also good for the consumers."

India's moulded luggage industry is dominated by three Big Berthas: Blow Plast Ltd, Universal Luggage Manufacturing Co Pvt Ltd. and Safari Industries (India) Pvt Ltd. Competition to Piramal is provided by Jal Engineer, the entrepreneur who originally introduced HDP (High Density Polythene) luggage into the country through Blow Plast. Universal Luggage (Aristocrat, the second largest selling brand) recorded a sales turnover of Rs 11 crores during the year ended May 30, 1982. It was reportedly promoted by Engineer (who has no formal designation in the company but is linked to it by family ties). Safari, which accounts for 10 per cent of the national market, is also led by a former associate of Engineer and a director of Blow Plast, S Mehta.

Government Policies: "The Government's economic policy lacks consistency. It keeps on clamping new regulations without having worked out the impact of the earlier ones. This has created a sprawling bureaucracy and mountains of paper. The Government should adopt a consistent policy towards trade and business for at least 10 to 15 years. Presently there is no economic direction and its economic policy is only political. There should be decentralisation at all levels. The Chief Ministers are all political nonentities. The day a CM is appointed, there are dissidents around him. The political leaders are only concerned with staying in power and nothing else. Their policies are short-sighted and implemented in bits and pieces. Look at the MRTP Act and the Land Ceiling Act. In fact, the Land Ceiling Act has actually sent prices spiralling. The criteria laid down in 1968 are meaningless now. What the Government needs to do, and fast, is to adopt a rational approach in their economic policies and to re-appraise all their policies and their impact. Even in its foreign trade policy, there is a lot to be desired. We are just not geared for international trade. Singapore, Taiwan and Hong Kong were infrastructually backward 30 years ago but they are now miles ahead in tapping the world market." ■

DILIP PIRAMAL, *is regarded as one of the ablest young entrepreneurs today.*

LENNY AARONS

Those Who Enjoy, Also Serve

by K.C. Khanna

AFTER the non-aligned summit—what? Nothing, says G H Jansen in effect in an article alongside About the outcome of the meeting's deliberations in the economic sphere (page 21), L K Sharma is equally despairing In concrete terms, they are both right The achievements of the Seventh Summit, by the inexorable logic of the Non Aligned Movement (NAM) since its inception, have been entirely in the realm of the intangible The point is that this time they have been ramified and considerable—despite the worst external environment ever and a sharp increase in dissensions within

For one thing, Mrs Gandhi's deft stewardship has won praise from *Pravda* as well as *Newsweek* The tilt towards Moscow, imparted at Havana by Dr Fidel Castro, has been corrected Washington has been mollified without estranging Moscow Implicit in the angular encomiums showered on the Chairperson's role is NAM's renewed acceptability When it comes down to hard bargaining on arms reduction or trade and aid flows in world fora, this may not count for much But it does count Member-nations of NAM had called for a New International Economic Order, for instance, at Algiers in 1973 Today the quest for NIEO is universally respectable; it has many influential adherents in the industrialised countries, willing and eager to pursue the goal sincerely if they come to power The possibilities are no longer theoretical

Independence of nations cannot be sustained by bread alone; they also have to have pride to spur endeavour A major achievement of the New Delhi summit was to boost the pride of every participating country in itself and in belonging to the group—whether it was big or small, pro-East, pro-West or neither The feelings of shame or guilt generated at Havana evaporated as India's new-found skills in political management unobtrusively came into play Dr Fidel Castro was warmly applauded by Mrs Gandhi herself General Zia had his ritual say on Kashmir, balanced by an equally *pro forma* rebuttal by the Prime Minister The Africans were allowed to strengthen the mild wording of the Indian draft resolutions on South Africa, Namibia, Angola and so on, so were the Latin Americans on matters of concern to their continent No bubbles were pricked, no feathers ruffled Cooperation, within and without, rather than combat remained the keynote Combining resilience on peripherals with firmness on essentials, the host delegation managed to sort out all thorny issues—Afghanistan, Kampuchea and venue of the next Summit included

Whatever its antecedents, the success of the New Delhi Summit must be attributed to an extension of the Commonwealth principle Every member-nation is sovereign but bound with the rest by a sense, in one case, of shared history and, in the other, of common commitment to independence, peace and economic progress In essence, NAM now is a club with no membership fee Inwardly, the assembled kings, presidents, prime ministers, shaikhs, amirs and generals, in or out of uniform are thrilled to speak for folks back home amid a vast gathering of rulers the like of which they have seldom, if ever, the opportunity to address—with hundreds of mediamen to relay their orations selectively right round the globe. No wonder, at New Delhi, they seemed to be happy as if gliding through a seventh heaven and were so keen not to spoil the show

But those who enjoy also serve. Through calculated personal and official contacts, General Zia, King Hussain, Mr Yassar Arafat of PLO, President Amin Gemayel of Lebanon and Afghanistan's Prime Minister Kheshtmand got something for their people that months of painstaking diplomacy may or may not have been able to secure And, for India, the host, it was one long, glorious moment of triumph The carping critics of the Government who say that it had no business to deploy 30,000 security men, 10,000 cars and 6,000 men and women to cater for the needs—and whims—of visiting delegations at a cost of Rs two crores or so, when Assam is in flames and thousands of our own people in drought-stricken areas are pining for drinking water, are clearly barking up the wrong tree The nation as a whole cannot live in isolation and bridges with the world cannot be built on the cheap.

At the very least, like Asiad, NAM-7 demonstrated once again that, at a pinch, our Government works As an exercise in external relations, it was far more cost-effective. And that is no mean gain in a country that lives on hope.

Beyond NAM-7 —A Chasm

Sometimes with one, sometimes with the other, according to the merits of each case. That is non-alignment, says G.H. Jansen.

AND just where does non-alignment stand after two long weeks of deliberations at the Seventh Summit Conference in New Delhi? Before that question can be answered, one has to decide just how seriously those deliberations have to be taken That may seem a singularly irreverent approach towards a grand and prestigious occasion, what was after all the largest single gathering of Heads of State and Government ever held anywhere

Forty-nine Kings, Amirs and Presidents came to Delhi and 13 Prime Ministers, 101 countries were represented, and the meeting was covered by around 1500 mediamen The arrangements were elaborate and efficient, and that they were laid on in less than four months is a great tribute to Indian energy and application But because of the fears about security, especially concerning the Presidents of Iran and Iraq, neither of whom actually turned up, the delegates were totally secluded for first few days which was particularly frustrating for the journalists. And because of that seclusion from the outside world it became that much easier for the participants to believe that their deliberations were of real importance.

Those deliberations, mainly the wording and rewording of paragraphs in the final declaration were intense and prolonged, especially in the drafting committees, and in the final days the delegates, working against time, were exhausted for lack of sleep. Even for the journalists, observing from the outside, it was not easy not to be caught up in this rush and bustle of activity which, it would seem, surely must be of importance. Yet the hard fact is that what the non-aligned say actually counts for little, it is not noticed, it makes little difference because all the 101 put together have little financial, military and economic power, though they have enormous potential As the President of Algeria put it, rather pathetically, "The great powers barely notice us."

Take the three-day-long discussion by the Foreign Ministers on who should represent Kampuchea Whatever was decided, and it was finally decided not to put anyone in the Kampuchean seat, it did not make the slightest difference to the struggle going on in the rice fields and jungles of Kampuchea

With a typical touch of Nehru hauteur, Mrs Gandhi said she had no intention of going around pleading anybody's case. If she and the eight-member committee, constituted to take over from the seven-member Arab committee set up by the Summit, are not prepared to do just that then it was a futile gesture to set it up in the first place. The Palestinians, if not Arab heads of state, deserve more from the new leader of the non-aligned.

(The only useful purpose this debate served was to reveal that the non-aligned are split into three more or less equal groups, 30 pro-West, 35 pro-East—on this issue anyway—and 36 sitting on the fence.)

Thus the delegates, with a long elaborate agenda to deal with and convinced of the importance of their task, produced a mass of words in the final declaration. There is the New Delhi message to the whole world, then there are the very long political and economic declarations, a separate action programme for economic cooperation, and a declaration on collective self-reliance. The last Havana Summit produced something like 56,000 words; New Delhi has brought forth at least as many and probably more. Since,

BACK TO CENTRE POINT? There was much anticipation, especially in the West, that with Mrs Gandhi as Chairman the movement would swing away from the leftward tilt given to it by Castro, says the author.

except for the specialist, no one is going to read through this boring book, the conference, in the long run, is not a success. India wanted a much shorter, pungent, pointed final statement but she was overborne because all the various members wanted their particular grievances to be aired: one of the penalties of an inflated membership.

Several speakers called for a revitalisation of the movement and a fresh statement of its values and objectives. The conference certainly tried to do this: there is a lot about what non-alignment is supposed to be in the New Delhi message, as also in the prologue and epilogue to the political declaration, but nothing new or striking. The trouble is that the original formulations about non-alignment were the thoughts of a great man, Nehru; these present texts are only rewordings by officials who were mainly responsible for the drafting. On one of the special conference boards that dotted the streets of New Delhi there was a very apt quotation from Mrs Gandhi: "Non-alignment Is The Courage Of Independence". But she did not expand on the thought in her speech, and in the speeches of other delegates every conceivable definition except the right one was given.

It is significant that no less than three of the "non-aligned" leaders who aligned with the West—Bourguiba of Tunisia, Mubarak of Egypt, and Arap Moi of Kenya—explicitly defined it as "equidistance" between the super powers which everyone knows it is not. Was this a coincidental mistake or was there orchestration? The political declaration itself got it wrong when it said: "The quintessence of the policy of non-alignment has always consisted of the struggle against imperialism, colonialism" and so on; or, as Premier Bishop of Grenada put it, "Non-alignment is anti-imperialism, anti-colonialism, anti-racism, anti-zionism, etc." Non-alignment is not just negatively *anti* this, that or the other. This is to confuse the result with the master principle of independence, which politicians do not seem to wish to declare because it is too clear and simple and challenging.

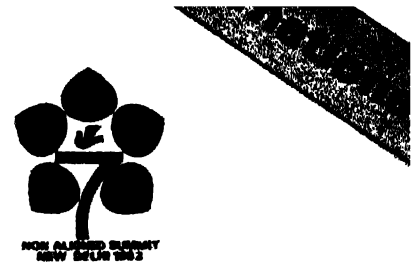
Lacking a redefinition of principles the suggestions made for reforming the movement got lost in the stream of words but should be noted. The result of the Kampuchean debate was what appeared to be an understanding that a committee would draw up criteria for the expulsion or suspension of members. But this most valuable suggestion just does not appear in the final declaration. Then, after all the self-congratulatory speeches on the rapid growth of the movement, the Iranian representative said, quite rightly, that quality was more important than quantity and that a "supervisory" body should be set up to check on the members' non-aligned credentials. If only that would come about! And the Peruvian delegate correctly said that consensus, that favourite *mantra* of the non-aligned, was "useless and contrary to the movement's principles". Perhaps it is not contrary, but useless it is.

As regards concrete achievements, the conference rightly seemed to place more emphasis on economic than on political problems. But it is on economic questions that despite calls for global negotiations and so on, it has got nowhere. Because as the Malaysian Premier said: "There is no hope in the north-south dialogue... the insensitive north will make no concessions." What was of practical value was the new idea of an international debt restructuring facility because behind it lies the real threat that the debtors cartel will declare mass bankruptcy. Politically, the conference could achieve nothing on two war situations—on Afghanistan because the Afghan Premier told the conference to mind its own business and on the Iran-Iraq war because Iran rejected every idea for a negotiated settlement.

However, the New Delhi declaration was courageous in naming names in condemnation. The US was roundly denounced, many times, for its assistance to Israel, and both the US and Russia were asked not to build up their military power in the Indian Ocean. Why was there no mention of Russia in the section of Afghanistan? Nothing was said about Zaire resuming relations with Israel, though denunciations of Israel covered several pages of text. Diego Garcia was mentioned but not under the issue of the Indian Ocean as a zone of peace, to which the main threat is Diego Garcia. To please Sri Lanka, which did not want to displease America, Diego Garcia has become a problem of decolonisation, not the nuclear menace it is.

There was much anticipation, especially in the West, that under Mrs Gandhi's Chairmanship the movement would be swung back to centre point, away from the leftward tilt given to it by Castro. She showed scant respect for his claim that Russia was "the natural ally" of non-alignment when she remarked before the conference, "I do not know what a natural ally is." Yet the declaration is weighted more against the US than Russia. But no one felt that this was due to an Indian tilt. It is simply that at present the US follows policies and has friends like Israel that put it at loggerheads with the non-aligned. That is non-alignment sometimes with one, sometimes with the other, according to the merits of each case.

One cardinal idea, notably absent, was population control. Since almost all the economic ills of the Third World can be traced to rapidly increasing populations it is very strange that there was no mention of this subject and no suggestion of action in all the many words on commodity controls and special drawing rights and UNCTAD VI. This is a perfect example of how conferenciers, busy with their formulations, can get right away from the problems of the real world.



Mrs Gandhi, the new chairperson, as she seems to prefer to be called, said she would take her responsibilities seriously. But she backed away from two suggestions that she give a lead. Arafat proposed that she should head a non-aligned delegation that should visit the friends of Israel in the West and impress on them the dangers of the Middle East situation; in short to give the peace process a much needed shove. And Jayawardene of Sri Lanka suggested that she do the same thing but in order to make the rich countries realise that they are interdependent with the poor and that both are caught up in the same crisis. The two missions could have been combined. Nothing came of these good suggestions obviously because the lady was unwilling. Which is a pity.

In any conference there is always the useful byproduct of personal contacts, and New Delhi was no exception. Indeed, there were reconciliations between some of the squabbling Arab states which was a very good thing. But these were due to enforced proximity rather than non-alignment.

So what is the answer to our initial question? Non-alignment after the conference stands much where it did, and looks much the same, as it did before the meeting. The main cause of this immobility is its by now unwieldy bulk. The movement's membership is simply too large and undiscriminating, and it is so large that it can no longer be slimmed down and it can no longer move vigorously. It is indeed rather like an elephant sunk upto its belly in a swamp, but which can still thrash around and trumpet mighty loud. ■

Critics Are All Wrong

Major Move Forward

Belgrade, Cairo, Lusaka, Algiers, Colombo, Havana and now New Delhi have hosted the non-aligned summit conference of heads of State or Government since 1961. Each summit represented a certain stage in the development of the Non-Aligned Movement (NAM). What is the significance of the seventh summit in Delhi held this month? T.N. Kaul, former Foreign Secretary, takes stock.

THE results of the seventh summit have to be judged not by its venue and excellent arrangements made by the host country. These are important but what is even more important is the fallout of the summit in the political, economic and security fields of the non-aligned countries. How far has the seventh summit succeeded in tackling and meeting the internal and external threats to NAM? To what extent have the fears and apprehensions of some non-aligned countries been removed? Which factors have prevailed? Those that unite the movement and strengthen its solidarity or those that divide and weaken it? How is the movement likely to develope in the next three years with India as chairman?

These are legitimate questions and although no final answers can be provided to all of them, the trends are there and point in a definite direction. What are these trends that have emerged from the seventh summit?

The Delhi summit has done well to put first things first and brought the focus on the urgent need for peace and disarmament, nuclear disarmament in particular. Without peace in the world there can be little economic development which is the greatest need of the non-aligned countries. And peace in the thermo-nuclear age of today hangs by a slender thread; the sword of Damocles is there in the dangerous and precarious balance of nuclear terror which threatens the very survival of mankind. The Delhi summit has, therefore, rightly gone back to the 1961 summit's priority for nuclear disarmament and peace. Though the NAM may not be able to make an immediate dent on the policies of the nuclear weapon countries, it can, in the long run, help mobilise world public opinion on this issue. It can act as a catalytic agent to the movement for a nuclear freeze which is gaining ground rapidly among the peoples of the world in general and those of the nuclear weapon powers in particular. India's stand and role on this question has been consistently commendable and helped to consolidate non-aligned opinion.

While the emphasis on peace and nuclear disarmament is necessary, it does not, by itself, help the economic and social development of the Third World, unless the resources that are today being wasted on armaments by the developed countries, are diverted to help the developing countries. One half of the world's population—mainly in the Third World—is still living below the poverty line. Pious declarations and long-winded resolutions are of little significance and meaning to these hundreds of millions of hungry and poor people in the Third World.

The seventh summit has, therefore, rightly concentrated its attention on the widening economic gulf between the developed and the developing countries and emphasised the urgent need for both a North-South and a South-South dialogue. The former is likely to take time, judging by the tardy progress in holding global negotiations, but the pressure must continue. At the same time, the non-aligned countries could do much more than they have done so far in achieving collective self-reliance, to the maximum extent possible, among themselves. The Delhi summit's concrete proposals to pool together the potentialities of the Third World through commodity, trade, transit, shipping, financial, banking and communications arrangements and the creation of Food and Energy Reserves and a common fund are steps in the right direction.

However, much more needs to be done in a concrete manner. For instance, India's technical and infrastructural know-how could be utilised by the developing countries more usefully and economically than Western technology which is available only in limited measure and at exorbitant prices and not always suited to the conditions prevailing in the developing world. India could also train many more students from the Third World countries if the latter (especially OPEC) are willing to help finance special institutions in India for this purpose. Already India has over 30,000 students from the Third World but the demand is much greater, especially in view of the increase in the fees imposed by UK, USA and other Western developed countries. The petro-dollars could be invested more usefully and productively in the oil-importing developing and the least developed or most seriously affected countries, instead of being invested on buying real estate and armaments and being recycled in the developed West.

This raises the question: How are the non-aligned countries to safeguard their security unless they have enough arms for their defence? This is an important and legitimate question. Experience shows that the answer does not lie in embarking on an arms race which will only make them more and not less dependent on the arms manufacturing countries in both the power blocs. By supplying arms to opposing sides within the non-aligned family, the two power blocs

are projecting the cold war into the Third World and fighting their battles by proxy, as it were, on our soil.

The answer really depends on the willingness of the non-aligned countries to enter into treaties and agreements among themselves, in each sub-region and region, eg South Asia, South-East Asia, Indochina, the Gulf and West Asia, Africa, the Caribbean, Central and South America. Such agreements and treaties could provide not only for economic, technical, cultural and scientific cooperation but also for non-aggression and non-interference in internal affairs and entering into immediate mutual consultations in case of aggression or threat of aggression against any signatory. The presence of countries like India and Pakistan, Egypt and Indonesia, Vietnam and Bangladesh, Nigeria and the Congo, Tanzania and Zambia, Guyana and Trinidad, Mexico and Argentina (to name only a few) in such agreements would provide a greater sense of security to each region as a whole and help keep out foreign interference, specially by great and super powers.

It is by such treaties and agreements that situations like those in Afghanistan and Kampuchea, Iran and Iraq and the internecine quarrels within the NAM could be defused and prevented. India will have to take the initiative which has been lacking so far.

The seventh summit has done well in not letting these internecine and divisive issues divert attention from the more important and unifying factors in NAM. India's role in defusing the explosive potentialities of the Afghanistan and Kampuchea situations been appreciated, by and large, by almost all the delegations—privately, if not publicly. India may be in a minority but that does not mean it is wrong. As Jawaharlal Nehru said in the early years of NAM, India may sometimes have to plough a lonely furrow. We did so from the early 50s in the case of the People's Republic of China occupying its rightful seat in the UN and the rest of the world accepted that position in 1971. We have also proved right in our stand on Afghanistan and now Pakistan seems to be veering round to the view that a peaceful political dialogue is a better and only way to resolve this question than a confrontation. Similarly, in the case of Kampuchea, the ASEAN will have to enter into a political dialogue with Indochina rather than try to impose a government supported by some great powers from outside on Kampuchea.

On questions like those of colonialism, imperialism, neo-colonialism and racism there are no basic differences among the non-aligned. They cannot be and are not indifferent to these basic issues. Some may be more emphatic and militant than others but that is only natural. The front line states which are directly affected naturally feel more strongly. But, there is no question of weakening the non-aligned stand on these questions. India, as chairman, will have to further unite the non-aligned countries on these issues so that early solutions may be found, especially on the independence of Namibia and the right of the people of South Africa to equality.

The serious situations which threaten the peace and security, the unity and development of the non-aligned are aggravated by the denial of the inalienable right of the people of Palestine, Nicaragua, El Salvadore, Cuba and Surinam to live in peace and freedom as independent nations in their own homeland. Israel's continued occupation of Arab territories acquired by war and the use of force is a standing menace to peace. The attempts of some great powers to bolster Israel and divide the Arabs must be resisted and countered by the NAM. There can be no peace in the Middle-East unless Israel withdraws from all Arab territories occupied during and after the 1967 war. She must respect the right of the Arabs, including Palestinians, to live within secure and peaceful frontiers if she demands the same for herself.

The loud applause and hearty ovations received by Yasser Arafat, head of the PLO, Nujoma the head of SWAPO and Fidel Castro, President of Cuba, symbolise the depth of feeling among the non-aligned on these issues. India has been second to none in giving support to these questions. Her success, as chairman of the NAM, will depend not only on her own attitude but also on the unity and solidarity among the Arabs. If this unity is there then India could exert diplomatic and political pressure and influence on the powers that be to arrive at a peaceful political solution. The alternative is violent conflict and confrontation which is in nobody's long term interest, neither that of USA or USSR nor that of Israel or the Arabs.

India must state her national stand on these issues clearly and firmly. That will strengthen and not weaken India's role as chairman of the NAM. Her forthright stand on keeping Kampuchea's seat vacant called the ASEAN bluff, spearheaded by Singapore, and brought the NAM to a proper frame of mind. On the issue of Afghanistan opinion in the NAM is gradually veering round to India's stand and India must not yield to "Islamic" or other pressures.

Mrs Gandhi's two speeches—especially her second one—on the opening day of the summit put things in their proper perspective and order of priority—peace and disarmament, the widening gap between the developed and developing countries, the urgent need for a South-South dialogue. Her emphasis on the questions of Namibia, Palestine, imperialism, colonialism, neo-colonialism and apartheid, the Indian Ocean and the Iran-Iraq conflict, was well received. However, it is necessary to follow up these initiatives concretely both at the national and international levels.

The summit is over. What are its gains and losses? It is perhaps too early to assess them but the trends point in a positive direction.

FIDEL CASTRO LOOKS ON PASSIVELY as the Summit's Secretary-General K. Natwar Singh holds a hurried briefing with the New Conference Chairperson, Indira Gandhi.

The Summit is over. What are its gains and losses? It is perhaps too early to assess them but the following trends point in a positive direction:

1. The attempt by some countries to weaken and divide the movement from within has failed. But, they are likely to make further attempts to destroy the convention of consensus on procedural grounds. This will have to be strongly resisted. The NAM, unlike the UN, does not decide questions by a simple majority but by consensus. Where there is no consensus—as on Kampuchea—the previous Summit decision stands. India, as chairman, will have to be firm on this.
2. The internecine quarrels and conflicts within the NAM have not been settled, but they have not been allowed to divide the Movement. However, this is not enough. India, as chairman, with the help and cooperation of others, will have to take concrete initiatives to resolve them politically and peacefully through dialogue and discussion rather than allow the present confrontation to continue. As chairman, India could and should take bolder initiatives which she was perhaps hesitant to do so far. For instance, there are chances of defusing the situation in Afghanistan and, with time, bringing about a *modus vivendi* between the Indochina states and ASEAN on Kampuchea. The Iran-Iraq conflict will take more time and effort to resolve peacefully, but India stands in a favourable position to attempt this. She is trusted by both parties and has the overwhelming support of the NAM in this regard.
3. The NAM must take bolder initiatives in convening a conference on the Indian Ocean. Whether the US Administration agrees or not we must mobilise opinion among the non-aligned littoral and hinterland states and other interested powers. The NAM has given a mandate on this which must be followed up.
4. Similarly, on the need for collective self-reliance and a South-South dialogue the NAM has given a clear direction. This needs to be followed up simultaneously with efforts to have a North-South dialogue and global negotiations. What is needed is political will among the non-aligned developing countries. It does exist but is lying dormant and needs to be activated. India could play a very important role in this matter, being one of the most developed of the developing countries.
5. On peace and disarmament, and nuclear disarmament in particular, there is need to mobilise support both in the developing and developed countries. The approach has to be step by step—calling for a freeze of nuclear stockpiles and the prohibition of first strike, followed by a ban on the use and production of nuclear weapons and their final liquidation. At the same time nuclear technology must not be allowed to become a monopoly of the nuclear weapon powers and their allies. It should be made available to all countries, especially the developing countries, under international safeguards made applicable to all countries, especially the nuclear weapon countries, unlike in the Nuclear Non-proliferation Treaty (NPT) which is discriminatory in character.

At the same time the use and production of bacteriological, chemical and binary weapons of mass destruction must be totally banned. The seventh summit has given

riority to this and it is now upto India as chairman, and others to follow this up rigorously and effectively.

6. Last, but not the least important, is the struggle against colonialism, imperialism, neo-colonialism and racial discrimination, the struggle for national self-determination of all peoples and nations in Africa, Asia, the Caribbean, Central and South America, and the need to safeguard the security, independence and development of all non-aligned countries, especially the smaller ones. The summit has given a clarion call on all these matters but mere resolutions will not do. The NAM must mobilise political, moral as well as material support for all such struggles. It must try to enlarge the area and climate of peace on the basis of mutuality of interests and solidarity in action.

Treaties of peace, friendship, cooperation and non-aggression, providing for immediate mutual consultations in case of a threat to any signatory, should be canvassed on a sub-regional, regional and inter-regional basis.

7. The creation of a New Economic International Order (NIEO) is important. So is the need for a New Information and Communication Order (NICO) where India could take a lead.

The above are only illustrative and not exhaustive points—which have been indicated in the Delhi declaration. There is need to evolve a machinery by India, as chairman, on an informal basis to start with, to implement and give effect to the mandate of the NAM. India will have to strengthen her delegation at the UN where the non-aligned Bureau operates. She may also have to set up an informal national advisory body at home, comprising eminent and qualified persons, to collect, collate and assess information from all non-aligned regions and sub-regions and put it up to the chairman for concrete follow up action. The Bureau in New York is too large to do this and needs to be supplemented by such a small informal body.

India has accepted a heavy responsibility as chairman of the NAM for the next three years. Mrs Indira Gandhi has indicated India's position in clear terms at the summit. She will have the full support not only of the government machinery but of all her people and those of the Third World to translate these ideas into action ■

PRESIDENT ZIA addressing the Conference. The signing of a bilateral accord between the Foreign Ministers of India and Pakistan was commended by the General.

World Economic Reform

Still A Cry In The Wilderness

The Seventh Non-Aligned Summit met under the shadow of a world economic crisis which threatens to re-enact the tragedy of the great depression of the 1930's. The conjunction of circumstances is truly foreboding, says L.K.Sharma.

IT was at Algiers in 1973 that the Fourth Non-Aligned Summit gave the call for a New International Economic Order. A decade later, the non-aligned movement is still knocking at the doors of the industrialised North to let it sit at the negotiating table.

World production has started declining and the world trade turnover has remained stagnant over the past two years. Developed market economies are going through a recession, with unemployment exceeding 10 per cent of the labour force.

The per capita gross domestic produce of many developing countries has declined for the first time since the WWII. The export earnings of developing countries have also shown an ominous decline. Commodity prices in real terms are the lowest in the last 50 years. The terms of trade are the worst ever and the onslaught of protectionism is crippling.

Developing countries are facing an erosion of financial flows with a fall in medium and long-term lendings. Concessional flows have declined and conditionality of financial assistance has hardened. Their balance of payments deficits and their debt burden has reached crushing levels.

The foreign exchange loss suffered by developing countries during the past two years is estimated at $ 200 billion. This loss has been due to a fall in export earnings in the wake of a collapse of commodity prices, rise in debt service payments because of high interest rates and decline in the annual rate of private bank lending to developing countries.

To add to all this there has been a disruption in international economic relations.

Developing countries face disaster but in an inter-dependent world, their plight has set off a chain reaction leading to a decline in their import capacity, consequential reduction in the exports of developed countries and contraction of world economic activity.

One has to remember that 30 per cent of the developed countries' exports go to developing countries: that Mexico is the third largest market for the US and Nigeria is the largest market of the United Kingdom.

Most of the experts ascribe the present troubled state of the economy to attempts made by the industrialised nations to curb double-digit inflation by contractionist policies, by raising their interest rates and allowing growth to slow down and unemployment to rise.

Meeting against this sombre background, the Non-Aligned Summit could hardly afford to devote all its time to quibbling over the vacant seat of Kampuchea and inevitably the economic issues came into sharp focus in the speeches of the heads of state and government. The incoming Chairperson, Mrs Indira Gandhi, set the tone by devoting most of her keynote address to the current world economic crisis and its debilitating impact on developing countries.

Her address contained no ideological outbursts and no accusations. Besides a dispassionate analysis of the situation, what it did contain was some concrete proposals, such as the one on convening an international conference on money and finance for development.

If the media did not reflect this marked emphasis on the economic issues, it is because all are familiar with the bazar version of the Afghanistan and the Kampuchean problems but there is no bazar version of the global round of negotiations available.

The fact that development has a significant political dimension is not to be forgotten. It is basically because of the lack of political will that the North-South dialogue is stalled. With the economic clout of the OPEC group having been weakened, all that the Non-Aligned Movement has is its political standing.

The summit was strongly urged to exercise such political pressures as it is capable of. To this end, Sri Lanka, Algeria and Pakistan made different proposals for the non-aligned leaders taking an initiative for direct summit-level contacts with the North. However, the new Chairperson, Mrs Gandhi, opted for a more cautious approach instead of rushing with a demonstrative gesture. She called upon developed countries to join her and other Third World leaders at the forthcoming session of the UN General Assembly in September for a dialogue on all issues of common concern.

Mrs Gandhi had to be doubly cautious because unfortunately the Non-Aligned Movement has not matured enough to trust a select group from within to talk to the North at the summit level. While a summit with universal participation can hardly conduct a meaningful business, the idea of a restricted summit does not appeal to most members. No one wants to be left out.

It is this lack of mutual trust besides the lack of financial supporting mechanism which has hampered the progress of Economic Corporation among Developing Countries (ECDC). Much was said at the summit on the virtues of South-South cooperation but little was done to ensure that it becomes a reality.

The OPEC group came determined to resist any suggestions that may involve a financial commitment on its part. Other concrete proposals were either watered down or shelved through the familiar mechanism of reference for feasibility reports.

And all this after a dismal review of the progress of ECDC was presented to the summit. It stated that in the absence of requisite financing arrangements, proposals and schemes of ECDC were yet to get off the ground. The only response of the summit was to delete a reference to financial mechanism from the draft of an eloquent document which in the final form emerged as a "declaration" on collective self-reliance.

Among the North-South issues, high on the economic agenda of the non-aligned summit was money and finance, one of the areas of critical importance to developing countries. The programme of immediate measures commented to the North by the summit covers three other critical areas—trade and raw materials, energy and food and agriculture.

The programme of immediate measures was formulated because of the disappointing history of the talks for launching global negotiations which envisage a comprehensive and integrated approach to all issues. Gandhi said, "some of the problems of developing countries are urgent and brook no delay."

The summit has adopted a flexible approach to the Third World's negotiating strategy. As a delegate put it, instead of catch words, there are concrete proposals, instead of rhetoric, there is recognition of reality in the economic declaration of the summit.

The insistence on structural changes in the inequitable and outdated international monetary and financial system is there but it is not projected as an all-prevasive obsession. The all-or-nothing approach seems to have been abandoned and there are several suggestions for being implemented within the existing framework of the international institutions.

Despite suggestions by some member countries, the declaration has steered clear of expressions such as "debtors' cartel" or collective renegotiation of debts. The final document only talks about development of a →

framework for the restructuring of the debt burden of developing countries as an orderly response to the possible emergence of a serious debt crisis.

The programme of immediate measures calls for an increase in official development assistance, increase of IMF quotas to a level of 125 billion SDR, an immediate review of IMF conditionality and a substantial expansion of the current lending programme of the World Bank.

In the field of trade and raw materials, the declaration demands increased market access in developed countries for the Third World exports. It wants early ratification of the common fund agreement so as to bring it into operation by January 1, 1984.

With regard to energy, the programme calls for a net expansion of World Bank lending in the energy sector and the establishment of an energy affiliate of the bank.

In the area of food and agriculture, the declaration calls for an expansion of the food financing facility of IMF to cover other essential food items, increase in food reserves and the establishment of a food security system.

A major proposal contained in the programme of immediate measures is for convening an international conference on money and finance for development. This conference, with universal participation, will aim at a comprehensive reform of the existing inequitable and outdated international monetary and financial system.

The scope and the jurisdiction of the conference have not been defined precisely and perhaps intentionally with a view to first eliciting from the North its response to this proposal. The North has religiously kept financial and monetary issues out of the purview of the scrutiny by developing countries. On the eve of the Non-Aligned Summit, the US President, Mr Ronald Reagan, in a reply to Gen Ershad of Bangladesh strongly defended the role of the existing institutions, thus ruling out consideration of any structural reforms. (Bangladesh is the current Chairman of the Group of 77 developing countries which coordinates the Third World strategy for negotiations with developed countries.)

Any discussion on what developing countries want in the area of money and finance cannot avoid the term Bretton Woods system (named after a village in the United States) where the IMF was founded in 1945. The body of monetary rules under this system centred on fixed currency values expressed in terms of gold or dollars. The system broke down in 1971 but the world is still in search of a monetary system with more stability than the current one and less rigidity than that of Bretton Woods.

The current imperfect system operating in very difficult conditions has affected developing countries far more and they remain "innocent victims and bystanders" utterly exposed to outside financial pressures. It is this vulnerability and thin margins of financial protection, according to a UN expert, that has made developing countries call for reform, both in the regulatory aspects of the system and in financial assistance it provides. The criticism of the role of IMF was quite sharp at the Non-Aligned Summit.

A mere expansion of lendable resources to IMF cannot deal with the structural problems of trade and monetary imbalances in the world economy. For this, a new institution would have to be created. Such an "international trade organisation" was proposed at Bretton Woods when IMF was created, but its charter was never ratified.

The New Delhi Summit marked a change in the Third World strategy for talks with the North on global negotiations which should have been launched more than two years ago.

To cut a dismal story short, the last round of talks on this subject were held after Versailles Summit of the industrialised countries. But then the Group of 77 was told to accept the terms of finalised by the Versailles Summit.

The only silver lining is that the North has not gone back on its commitment in principle to hold global negotiations. The group of 77 had earlier no intention of compromising with regard to the character and scope of global negotiations. It did not want these in a truncated form. But it got weary of negotiations and made some concessions last year.

Even this did not help and two procedural points have remained to be sorted out. Developed countries do not want any reference to the UN resolution that may have the intent of binding them to the central conference decisions.

The New Delhi summit marked a change in the Third World strategy for talks with the North on global negotiations which should have been launched more than two years ago.

They also want to ensure that any ad hoc groups to be created should not duplicate the existing appropriate fora. Developing countries have opposed this as it would restrict the scope of the central conference where they may have some political voice.

The G-77 has already assured the North that all decisions in the central conference forum will be taken by consensus. But this has not made any difference and developed countries continue to fear that the Third World might try to alter the power structure and control over specialised agencies like IMF, the World Bank and GATT.

The Seventh Non-Aligned Summit, at the initiative of Algeria which proposed a two-phase global negotiations, has gone more than half-way to meet the North. The declaration says that global negotiations may be held in two phases and the first phase may deal with those issues on the formulation on and allocation of which agreement would have been reached. A conference with the United Nations be convened to launch the first phase in early 1984.

The second phase will cover contentious issues, particularly those affecting the structure of the international economic system and institutions.

They all may say that it is a good document that the Non-Aligned Summit has produced, working day and night, but what is a good document if the North refuses to look at it.

The assessment of the possible response of the North varies. Some, including Dr Mehbub-Ul-Haq, feel that developed countries might like to take advantage of this flexible and realistic approach at a time when a mild economic recovery is starting.

Others are pessimistic. They accuse the North of having used the talk of global negotiations to delay decisions on international economic cooperation at other fora. They feel with the brusting of the oil bubble, the little leverage that the South had has gone.

Dr Haq, on the other hand, points out that the North did not respond even when the OPEC had the clout and the Non-Aligned Movement was under a militant leadership. He feels that a dialogue will start because of the "shared nervousness and shared interests".

It is true that the EEC countries would also like the US to be more flexible. They have greater interest in a comprehensive North-South dialogue because of their stakes in the Third World markets, their dependence on the OPEC oil and their appreciation of the linkages between economic situation and world tensions.

But even the EEC countries have failed to move the United States and without the United States there can be no global negotiations.

The Non-Aligned Movement is calling but is anyone listening? ■

These Are Hard Times For The UN...

...says the world's top civil servant, Javier Perez de Cuellar, the UN Secretary-General in an exclusive interview with our special correspondent.

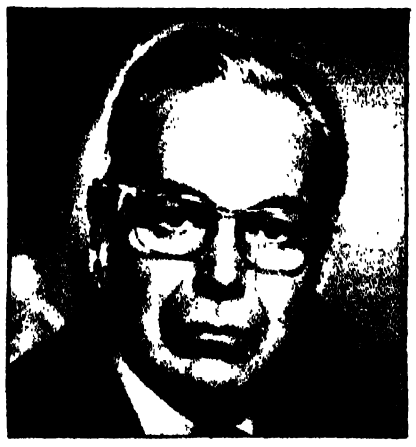
FOR Javier Perez de Cuellar, the soft-spoken Peruvian diplomat who stepped into the position of Secretary-General of the United Nations, the running theme is "I keep trying, we must keep trying." When in New Delhi to attend the Seventh Summit of the Non-Aligned Movement, the Secretary-General met several Third World leaders, all in the space of three days.

Behind the unruffled demeanour, however, is a heavy sense of disappointment. "It would be unfair if I mention some specific frustation. But there is constant frustration. You open the papers and you see there are so many problems and you cannot help solve them because the political will of the governments is not there." Frustration is inherent in the job—the most prestigious and the most thankless in the world.

What is remarkable is that frustration has not paralysed the institution. It is remarkable that, though issues have dragged on for decades, no major initiative taken by the UN has been really buried. The world is dissatisfied with the United Nations but the world is not ready to dispense with it.

"All our limitations stem from the fact that we are an organisation of governments." Even so, the "instrument" of the United Nations must be put to the fullest possible use. "I think that something has to be done in order that resolutions of the Security Council, especially when they are unanimous, are honestly implemented by member-countries. The drama of this organisation is that the countries have forgotten that they have signed a Charter, and that the UN Charter is for them a juridical commitment."

Javier Perez de Cuellar has made a bid to put more muscle into the organisation in his own way. In his 1982 report on the working of the organisation, the soft-spoken lawyer turned diplomat threatened, as it were, to invoke Article 99 of the UN Charter, which



JAVIER PEREZ DE CUELLAR.

says, "The Secretary-General may bring to the attention of the Security Council any matter which in his opinion may threaten the maintenance of international peace and security."

"I have not invoked article 99 so far. I prefer to use quiet diplomacy. Here in your own city (New Delhi) I have involved myself in so many dialogues which are tantamount to preventive diplomacy—being always there, you know, to say that the United Nations Secretary-General is at your disposal. It is trying to prevent a situation from becoming a confrontation—trying to pre-empt a crisis.

"If, however, for one reason or the other, one or some of the member countries do not want to raise a problem (in the Security Council) which I personally feel is a threat to international peace or security, I will not hesitate to invoke Article 99.

"But, at the same time, resort to Article 99 is always dramatic. If I could, I would avoid the drama."

This report has been a major satisfaction for the Secretary-General. "Things had to be said and we said them." Moreover, not only did the General Assembly support the report but the members of the Security Council—"who are rather a difficult club you know!"—have decided to reflect and work on it.

What the Secretary-General really means to do is to administer a diplomatic prod to the world organisation whose image, for various complex reasons, is at its ineffectual worst today in its 37 years of existence. Indeed, the main theme of the report acknowledges frankly that the UN has been unable to play as effective a role as the Chater envisaged for it.

When the UN came into existence in 1946 it inherited the concerns of a world singed by the fires of war—but a world not devoid of contrition and thirst for peace and justice. The feeling of "never again" was fresh among the 51 member-states who signed the Charter. Today, as many as 157 countries sit in the General Assembly and the Security Council, the inner sanctum of the UN, has been expanded. The permanent members are the same in name—the USA, the USSR, the UK, France and China. Their faces have changed. The sun has set a long while ago on the empire and the atom is a household word.

Apart from the threat of a nuclear catastrophe that hangs over the scene, never before has the crucible of man's history held as many active and simultaneously sizzling conflict-situations in the world as today: Palestine, Southern Africa, the Falklands, Kampuchea, Iraq-Iran, Cyprus, Latin America and Afghanistan. Indeed, there is hardly a nation in the world which is at peace with all its neighbours or a government at total peace with its own people. The UN has failed to unscramble all this. Yet this organisation of governments, of countries has not stood by either, but has involved itself in each of these regions, in one capacity or another, instead of packing up in despair, as some might have wished.

Mr Perez de Cuellar cites the success of tenacity in one instance at least. "Only through negotiations can there be solutions. The Law Of The Sea took nine years to establish. What has been achieved is enormous, inconceivable. Some countries who have difficulties will understand that they have to join the convention that serves the whole of humanity." The new convention of the Law Of The Sea was adopted in April 1982, defining not only the use and limits of territorial waters but also establishing a legal regime to govern the use of the ocean floor lying beyond all limits of national jurisdiction.

given some face-saving devices. What I have in mind is not to make publicity but to get results. I sometimes get better results from my quiet diplomacy than I would get if I took the whole thing to the Human Rights Commission in which there is a terrible debate, political elements are injected and nothing happens." "But," pauses Mr Perez de Cuellar, "sometimes I achieve nothing."

Similarly, arising from the problems of a government's relationship with its own people, is the growth of sharp social and economic disparities within a nation, the ugly juxtaposition of stark hunger and lush opulence. The poor get poorer and the rich get richer. Economic policies of governments shaped by political considerations are set to frustrate the goals of the strategy for international development.

"I could not agree with you more," asserts Mr Perez de Cuellar. "I come from a country where there are dramatic economic disparities. There is a solution. Of course, there is a solution. It is to go to the structures—the economic structures of governments. To modify them. But the political will is not there. The UN produces quite a number of resolutions which are not implemented. We have to go to the roots of the problem and keep fighting for real social justice.

"Not only in developing countries but in highly developed countries, I have seen tremendous social injustices.

"The United Nations addresses all social and economic problems of all the Third World countries. Unfortunately, we do not have the funds. We are witnessing, moreover, a decline in economic support to multilateral assistance. Most countries, Western or Eastern, prefer bilateral aid that is more visible. I will always prefer the multilateral. Take the UNDP which gives without preconditions, but we have no funds. Still, the UN organisations like UNEP, HABITAT, ILO and WHO are all trying their best."

But these are hard times for the United Nations and Mr Perez de Cuellar, without mincing words, says, "In some developed countries, mainly Western countries, there is bad publicity against the United Nations. They mixed up some issues, mainly the Middle East issues which have really very much affected the image of the United Nations in the US, which is a source of permanent concern for me."

"They politicise the United Nations and fail to realise that the UN is not a political forum. The UN is the whole system of assistance to the whole world addressed to all human problems."

That is not a perception shared either by the club of rich nations or the new rabble of the poor, the strong military powers flexing their muscles of sovereignty or the militarily weak seeking frantically to defend their sovereignty. The Secretary-General of the United Nations has miles to go. ■

What the Secretary-General really means to do is to administer a diplomatic prod to the world organisation whose image, for various complex reasons, is at its ineffectual worst today in its 37 years of existence. Indeed, the main theme of his report acknowledges frankly that the UN has been unable to play as effective a role as the Charter envisaged for it.

One of the major personal concerns of the Secretary-General has been the protection and promotion of human rights. It is in this area that one senses the deep personal disenchantment of the Peruvian diplomat. Human rights violations on a stupendous scale are taking place every day, 35 years after the Declaration of Human Rights was proclaimed by the United Nations in 1948. The General Assembly has considered the flagrant violations in Southern Africa, in the Arab territories occupied by Israel, in Chile and in El Salvador and expressed indignation. But there are only palliatives to deal with problems that require fundamental and radical solutions.

"It is always the same thing," says Mr Perez de Cuellar.

"The General Assembly has adopted a declaration of human rights. Everything is there. But unfortunately it is not implemented."

"Secondly, there is a body, the Human Rights Commission. Unfortunately, and we cannot help it, it is politicised. Because it is an organisation of governments. The governments are all trying to defend their own interests or the interests of their friends.

"But there is another way in which I am trying my hand. It is again the quiet diplomacy of the Secretary-General. I have an instrument—the Centre for Human Rights. There are many questions which I deal with by personally meeting the Ambassadors in New York, to improve the state of the people suffering.

"It is not sometimes easy to understand

YOU HAVE NOTHING TO LOSE ... EXCEPT YOUR BULGING TUMMY!

It's easy with NEW TUMMY TRIMMER

GUARANTEED RESULTS OR YOU PAY NOTHING!

It's new, it works, it's guaranteed.

It's the exciting new way to shape up quickly ... and what's more, it's EASY! Make your bulging tummy VANISH. This ingenious Bullworker's Tummy Trimmer is a simple device for anyone who wants a trimmer waistline, but doesn't want to grunt, groan, or give up good food.

No gimmicks, no diet foods. The Tummy Trimmer is based on the basic principles of aerobic and anaerobic exercises. By doing this programme, you're training your sleepy stomach to build a natural GIRDLE of muscles, and to stay FLAT. Your waistline will show it within just 14 days!

We're confident the Tummy Trimmer will work for you

Order your Tummy Trimmer right NOW, and accept our 14-day FREE HOME TRIAL OFFER— If not satisfied within 14 days simply return everything for a complete refund. No questions asked

from the makers of BULLWORKER

Mahta Mahal, 15, Mathew Road, Bombay-400 004.

Allow 21-28 days for delivery.

FREE WITH THE PRODUCT A NEW UNIQUE FAT MEASURE IF ORDERED WITHIN 10 DAYS

MAIL THIS ORDER COUPON NOW

BULLWORKER PVT. LTD. *Mahta Mahal, 15, Mathew Road, Bombay-400 004.* TT-no2 IL 76

Yes, I want to flatten my tummy, please rush me TUMMY TRIMMER for 14-day FREE HOME TRIAL. If I am not completely delighted with the results, I may return everything by expiry of trial period for immediate refund (less postage and forwarding charges)

Please tick ☑ appropriate box.

☐ Send by Registered Post Parcel. I am sending Rs. 194/- (Rs. 179/- plus Rs. 15/- P.&F.) by Draft/I.P.O/M.O. No. ..... dated .....
(Payable to Mail Order Sales Pvt. Ltd.)

☐ Send by V.P.P. I promise to pay postman Rs. 194/- on delivery

PERHAPS. THE FASTEST SPORT, to be played on a frozen surface, ice hockey is packed with constant action.

A Unique Sport In Simla

When Mr Blessington of the Blessington Hotel noticed that water froze easily at Simla, he started an experimental ice skating rink for himself and his friends. It proved so popular that it was soon thrown open to the English public. At the rink, the ice is converted into water through a natural process of atmospheric freezing as no artificial aids are used. K.S. Tomar recounts its glorious past.

THE ice skating rink at Simla, the only of its kind in the entire South East Asia is a paradise for winter sports enthusiasts, during the season which lasts from the last week of November right upto the end of March.

It was started in 1920 at the instance of an English gentleman, Mr Blessington. In the early days skating remained restricted to the Europeans but after Independence it was thrown open to Indians. Today, it attracts thousands of skating enthusiasts to the membership roster of the club. Mr Blessington had perceived that refrigerating ice would be an easy job in Simla because of the low temperature. The Blessington courts (4 Tennis Courts) at the club became the centre of the skating rink. The Garhwalis (natives of the Garhwal, hills of UP) who come to Simla in search of livelihood soon mastered the art of maintaining frozen ice. It is interesting to note that these Garhwalis (the skaters at Simla call them "mates") seem to have the ability of forecasting the weather and can even predict from the direction of the wind whether the sky will be overcast or not on a particular day since water cannot evaporate on cloudy days.

One cannot help appreciating the devotion with which Nand Singh, who is the head mate at the rink, has served there for 50 years. At 70, he is still energetic and now supervises the ice freezing operation. While he is enthusiastic about the sport-lovers of Himachal Pradesh and neighbouring states, he is quite upset about the felling of trees around the skating rink which has adversely affected the freezing of ice since a shady area is required to ward off sunlight for hard ice formation.

Every year during the second week of November the grass and weed is uprooted from the ground, which is then levelled and rolled. With the onset of the cold weather water is then sprayed to help frost to appear on the ground. The process of spraying is repeated till finally the layers of frost turn into ice which becomes sufficiently hard for skating.

ICE SKATER PERFORMS BASKET JUMPS AT SIMLA.

Ice skating is a fairly hazardous sport but it leaves the spectator enthralled. Ice hockey is another favourite ice sport and is packed with action and quick movements and is played with hockey sticks resembling their counterpart used in the sports fields, except that they are longer in size and the striking area is flat on both the sides.

The Late Marshal Josep Tito of Yugoslavia presented the club with a 200 tola silver trophy in 1954 when he was the Chief Guest at a skating show. Known as the Marshall Tito Trophy, it remains one of the most coveted awards, with every ice skater dreaming of winning it.

This unique club has attracted several dignitaries over the years. Vice President Mr Hidayatullah, during his tenure as the Chief Justice of the HP High Court used to drop in at the club and Mrs Gandhi's sons, Rajiv and the late Sanjay, used to visit the club during their trips to Simla.

Justice G.D. Khosla was the president of the club for several years and film star Rishi Kapoor started his film-career from the Simla ice skating club when he performed his maiden performance for *Mera Naam Joker*. Other films like *Jaanwar* and *Heera Moti* too have scenes of this rink.

Skating has always been a big attraction for the tourists visiting Simla. In fact the Punjab State Tourist Bureau used to arrange regular "tourist week" festival and ice skating for the tourists at the club.

MIXED PAIRS SKATERS PERFORM A BALANCING FEAT.

Ice skating is a thrilling sport. Spectators fall prey to it, watching different actions like free and fancy skating, pair skating, dancing on ice, forward and backward speed skating, jumping over baskets and ice hockey.

Paul Toomey the renowned American ice skater wanted ice skating championships to be held at the Simla ice skating rink as the ice there was far more "smooth" and "very fast" when compared to the artificial surface of rinks in Europe.

However, the dark lining is that the club is in the throes of a financial crisis. Last year it suffered a loss of Rs 22,000. Unless sports philanthropists or the government comes to its rescue the rink may have to be closed down. ■

The Curious Case Of The Asiad Archer

The inexplicable withdrawal of the ASIAD archery stamp and its subsequent, half-hearted release was a case of much ado about a non-existent "bungle", says Asok Kumar Das, Director, Maharaja Sawai Man Singh II Museum at Jaipur which houses the Rajasthani original on which the commemorative stamp was based.

THE stamp issued by the Posts and Telegraphs Department to commemorate the Ninth Asian Games has caused some controversy. Since the stamp is based on a Rajasthani miniature painting from a well documented set it would be interesting to discuss the matter in detail.

It is customary to issue postage stamps to commemorate major sports events. So there was nothing unusual in the ASIAD-82 series of stamps planned by the P & T Department. But instead of issuing the stamp at the ASIAD inaugural, the P & T Department issued a total of 12 stamps in several instalments. Since games like archery and wrestling have a long tradition in our country, the P & T Department rightly thought of making use of old miniatures to highlight them.

In their search for suitable designs they approached the Maharaja Sawai Man Singh II Museum of Jaipur for colour transparencies of an appropriate miniature painting and sought permission to make use of them. Obviously they had the well-known miniature, "Arjuna's archery skill winning the hand of Draupadi" from the *Razmnama*, in their minds. *Razmnama* is the Persian translation of the *Mahabharata* made for the Mughal Emperor Akbar. The superbly calligraphed four-volume manuscript, embellished with 168 exquisite miniatures by the leading masters of Mughal ateliers, is now preserved in the Maharaja Sawai Man Singh II Museum. The miniature shows Arjuna exhibiting his skill in archery by shooting a revolving fish in the eye by looking at its shadow in a cauldron of boiling oil. It was executed by no less an artist than Daswant, considered by his contemporaries as the greatest of all Mughal painters, in collaboration with another well-known artist Kesav in late 1583 or the beginning of 1584, before Daswant's suicide in a fit of depression.

As the older set of colour transparencies was unsuitable and since it would take some time to prepare fresh ones, it was suggested that the P & T Department try another miniature showing a similar theme: Krishna exhibiting his archery to win the hand of Princess Lakshmana, an episode from the *Bhagavata Purana*. The miniature is from a large and sumptuous set of *Bhagavata Purana* prepared for Maharaja Sawai Pratap Singh of Jaipur. Completed in 1792 AD, the manuscript contains 366 superb full page miniatures by a group of 14 painters working in the royal *suratkhana* (atelier). Although it cannot match the intricacy, the mastery of design, the line-work and the rich colouring of the *Razmnama* paintings the Jaipur *Bhagavbata Purana* is considered to be a fine example of its period. The colours are bright, crisp and eye-catching. Moreover, there was no delay in getting it photographed. As the P & T Department was working with a tight deadline it was only too happy to get an alternative. The technical data of the miniature and a signed note on the theme and all relevant details were supplied to the Department. The *Razmnama* miniature was also photographed and its transparencies supplied to the P & T Department *in due course (italics added)*.

The Museum was told that the P & T Department had selected the *Bhagavata Purana* miniature. The stamp based on it was to be released with another on wrestling (which was based on a miniature painting from a *Shahnama* manuscript in the National Museum, New Delhi). The date of release was set for September 4, 1982. The publicity brouchures along with First Day Covers were received by the Head Post Offices and philatelic bureaux all over the country. And the items were carried in all the national and regional newspapers of August 28, 1982.

But the stamp on archery was destined to hit the headlines. Both the stamps were withdrawn before their release without any official communication! Immediately rumours began to circulate—some ascribed the fiasco to a blunder in the description of the stamps, others commented on the wisdom of adapting a "palpably religious" theme for a sports event. After a few weeks' lull, the wrestling stamp was released (on October 30). The archery stamp was also released on November 6 *without* a First Day Cover, without the information sheet or any kind of advance publicity. Few buyers could discern that the stamp showed Sri Krishna aiming his arrow to the shadow of the fish and that the design was based on a beautiful miniature of the Jaipur School.

This unprecedented and obviously ill-conceived decision led to a series of surprising developments. There were complaints that the stamp misrepresented the well-known event of Arjuna's *lakshyabheda* mentioned in the *Mahabharata*. This was followed by a secret directive to withdraw the stamp from circulation on November 13 and a cock-and-bull explanation given by the P & T Department on November 24 that all the three million and odd stamps were sold out in six days and that the Department could not cope with the big demand from home and abroad.

In the long history of Indian philately such a thing has never happened! As nobody was prepared to swallow the explanation, senior officials of the P & T Board denied the whole story and assured the public that the stamp had never been withdrawn and one could buy any number of them in the post offices. But nobody explained *why* the stamp was not released on the originally scheduled date of release and when it was belatedly released, why without either the advance publicity, or the First Day Covers and the information sheets? Also, why was it quietly withdrawn from sale? If the P & T Department was in a fix about the authenticity of the painting, what prevented them from verifing the details from the Maharaja Sawai Man Singh II Museum? By withholding its name and not acknowledging its ready cooperation they have done a great disservice to that Institution.

Let us now take a close look at the paintings in question to determine who the hero is. The story of Arjuna's archery skill as related in the *Mahabharata* is almost universally known. The famed Pandava warrior succeeded in scoring a "bull's eye" by piercing the eye of the decoy fish placed on a revolving wheel on a tall mast, by seeing its trembling shadow in the cauldron of boiling oil placed down below. For his dexterity he won the hand of Draupadi, the beautiful Panchala princess. Daswant's painting (coloured and finished by Kesav) shows the amazed assembly of kings looking on at this marvellous feat. The designers of the P & T Department must have found it difficult to reproduce the soft and subtle colour scheme. Instead, they opted for the simpler and brighter Jaipur miniature from the *Bhagavata Purana*.

Although it is not as well-known as the *Mahabharata*, the *Bhagavata Purana* is well-known in all regions where Krishna is worshipped. Illustrated manuscripts were prepared in all parts of the country—especially in Gujarat, Rajasthan, Orissa and the Punjab hills. Maharaja Sawai Pratap Singh of Jaipur, an avowed follower of Lord Krishna (he wrote copiously on the Krishna theme under the *nom de plume* Brijnidhi), commissioned the large manuscript of the *Bhagavata Purana*—the life of Krishna—illustrated with 366 miniatures executed by his court painters including the ones dealing with the story of princess Lakshmana's *svayamvara* in which Sri Krishna succeeded in *Matsyabheda* where even the Pandava hero, Arjuna, had failed!

The episode is described in *Dasama Skandha*, Uttaradha, Chapter 83 as follows: "Lakshmana said: Virtuous lady (Draupadi)! Having learnt of my choice, my father, who is known as Brihatsena and who loved me—his daughter—contrived a plan. Queen! An artificial fish had been hoisted on a pillar as target in securing Arjuna as your husband on the occasion of the traditional ceremony of choosing a bridegroom for you" ■

Letter From Calcutta

Concrete Jungle

MR Abdus Sattar, the Congress (I) MLA, may have been exaggerating a bit when he declared that "the Government is non-existent in West Bengal, and a jungle raj is prevailing here". But even official figures (there were 31,631 recorded thefts in 1982, 9,163 cases of rioting, 1,421 murders, 1,133 dacoities and 1,012 robberies) suggest a dangerous drift towards lawlessness.

There was a time when the late Shanti Swarup Dhawan, then West Bengal's Governor, claimed he would far rather trust his daughter to a taxi in Calcutta than in Delhi. But only the other day, a taxi driver and his mates robbed two passengers of all they carried. The newspaper columns every day speak of villagers being battered to death, houses burgled and shops looted. Murder is as common as smash and grab raids, and five armed robberies were reported in a single weekend. In one of the worst recent outrages, a Bankura woman was raped and strangled during one of our massive power cuts. Even a policeman was forced at dagger point to hand over his watch and wallet in one of the city's most sedate residential streets.

The Home Department blames crime on economic hardship. A contributory factor may have been the decline of political conflict in the Left Front's first term, turning hoodlums to "normal" crime. While the latter trend has been reinforced, it is compounded by a revival of violent clashes between political groups.

Under The Ground

MR K.N. Das Gupta, General Manager of Calcutta's Metro, touched on a widely held fear when he announced that a special security force would prevent squatters from setting up permanent abodes on platforms. It is an admirable hope; but considering that at Tollygunge station people live even under the platform ledge, I do not see how the law will be enforced.

If not the homeless, then beggars, hawkers and pickpockets are bound to infest the Metro. The second worry is that since half an hour's brisk rain is enough to flood our streets, the underground of all places cannot remain high and dry.

But undaunted by hazards, the authorities are turning the city upside down, literally so, to press ahead with a project that was originally supposed to cost Rs 250 crores; the budget was revised to Rs 560 crores in 1980 and must now demand a great deal more. Even the fairly useless four-kilometre Esplanade-Bhowanipore section, to be opened next year at Mr Ghani Khan Choudhury's bidding, will need an extra Rs 22 crores.

Grassroots Democracy

CRACKS are beginning to appear in the Left Front as West Bengal moves on to elections for some 56,000 Panchayat seats at the end of May or in early June. The ruling coalition's victorious sweep of the 1978 polls may not be repeated this time; and the Congress (I), BJP and even the Sanjay Gandhi Vichar Manch are girding for battle.

But the real threat lies in divisions within the camp. In the last five years, many members of the Gram Panchayats, Panchayat Samitis and Zilla Parishads, originally elected on CPI(M) tickets, have left the fold to join other Left Front constituents. Mr Saroj Mukherjee, the Front's Chairman, says they were expelled for corruption and cannot be renominated. The Forward Bloc, CPI and Revolutionary Socialist Party — the main beneficiaries of their desertion — insist that their genuine change of heart must be respected.

What the CPI(M)'s allies feel is that while all partners are equal, the Marxists are more equal than others.

PHOTOGRAPHS BY MONA CHOWDHURY

SANTHALS AGITATE for their various demands, one of which is the inclusion of Santhali in the Constitution's Eighth Schedule.

THE RABINDRA BHARATI UNIVERSITY, (below), at the Jorasanko Thakur Bari campus.

Rabindra Sangeet

RABINDRANATH Tagore is becoming one of West Bengal's most sadly divisive legacies: everyone clutches jealously at his mantle. The decline of his dream of a universal centre of learning at Viswa-Bharati calls for separate treatment; now we are regaled with an unhappy tussle over the family mansion at Jorasanko in north Calcutta, seat of both the Rabindra Bharati University and the Rabindra Bharati Society.

Mr B.D. Pande, the West Bengal Governor, recently set the cat among the pigeons by suggesting that the Society's priceless collection of more than 5,000 paintings, rare photographs, first editions and gramophone records of Tagore's voice would be better looked after in a brand new complex in the Salt Lakes. While some welcomed the proposal, others instantly suspected it to be an attempt to deprive the Society of the aura that vests in Jorasanko.

It would have been so much more to the point if both the University and the Society were housed elsewhere, and the rambling old mansion in a narrow and congested street converted into a museum to perpetuate Tagore's memory. It is far too crowded for the purposes to which it has been put, and the Society's priceless collection is in danger of destruction. All the Shakespeare societies and theatres in Britain might as well demand a permanent foothold in Ann Hathaway's cottage.

Off The Rails

THERE is a cold war being waged between West Bengal's Accountant-General and Vigilance Commissioner on one side, and the State Government and Calcutta Tramways Corporation on the other, over the undertaking which, though taken over in the sixties, was not formally nationalised until this year. In the process, British malpractices are regularly cited, but there is also evident a lurking nostalgia for the "good old days" of sterling management.

The accusers speak of a "staggering number of financial irregularities" in the CTC. Though fares went up by 30 per cent in December, the official subsidy was raised from Rs 5 to Rs 7 crores. Though the number of trams on the roads went down from 305 to 280, maintenance costs rose from Rs 80 lakhs to Rs 1.20 crores. And though about Rs 14 crores (from the Rs 102-crore Calcutta Urban Transport Project) have already been spent, there has been no improvement in tram services.

The Accountant-General and Vigilance Commissioner talk of bribery and nepotism, purchases without tenders, unexplained "confidential" spending, and of misuse of cars and flats. They say that with 33 men per tram, there should be no need for heavy overtime payments which are now 26 per cent of the wage bill. The State Government seems to resent and repudiate all allegations, possibly because Mr Jyoti Basu, who took over the CTC during United Front rule, looks on it as his special baby.

Tribe On The March

MOST Bengalis cherish a romantic vision of Santhals. They are the simple laughing folk one glimpses on holidays in Ranchi and they form the idealised subject of many paintings by artists who dwell on bare bosoms, gleaming rounded limbs and a scarlet hibiscus in glistening raven hair. Active leadership of the original Nawalbari revolt and Santhal participation in Marxist-Leninist insurgency in Birbhum district, did not damage the bow and arrow mythology.

But the Santhals are now asserting mundane rights like everyone else. There was friction recently in Kalyani, Dr B.C. Roy's township of the future about 30 miles north of Calcutta, when the police tried to evict about a hundred Santhals who have lived on the outskirts for more than three decades. In Jhargram, where adivasis are present in substantial numbers, the Jharkand movement's wind blows fairly strongly. And now, Dr Shambhu Mandi, West Bengal's Minister of State for Tribal Welfare, has undertaken a march to press for linguistic respectability.

Dr Mandi says that since there are more than 500,000 Santhals in the State, their language should rank after Bengali. He demands its inclusion in the Constitution's Eighth Schedule. If Santhali is so recognised, Nepalis are bound to revive their claim and we can eventually expect new life for the demand to lop off Darjeeling district and make it part of a new Nepali majority Uttarakhand State.

Mafia In Coal

THE report that embezzlement of crores of rupees has been detected in a colliery near Deoghar in Bihar, and that "a formidable mafia gang is involved in these shady deals", only underlines the need for the clean-up drive now under way in the Dhanbad belt. Last year, Mr Ghani Khan Choudhury described some of Bharat Coking Coal's officials there as "moneylenders, thieves and associates of the mafia"; the too honest and diligent young auditor sent by a Calcutta firm of accountants was murdered in mysterious circumstances.

Nationalisation seemed only to have helped organised crime. The CBI claims to have unearthed rackets worth about Rs 50 crores, local *goondas* regularly extort protection money from business houses, coal is either stolen outright or assigned to fictitious names, and a large part of the public sector undertaking's employees really work for the underground.

All this was again brought to light recently when Bharat Coking Coal's new chief, Mr C.S. Jha, and the Deputy Commissioner of Dhanbad, Mr J.S. Brar, set up an organisation called Joint Voluntary Forum and began a cleansing operation in right earnest. It is a sombre comment on public life that a Janata MLA should be among the 900 or so people to be arrested for alleged complicity in criminal activity.

Bursting At The Seams

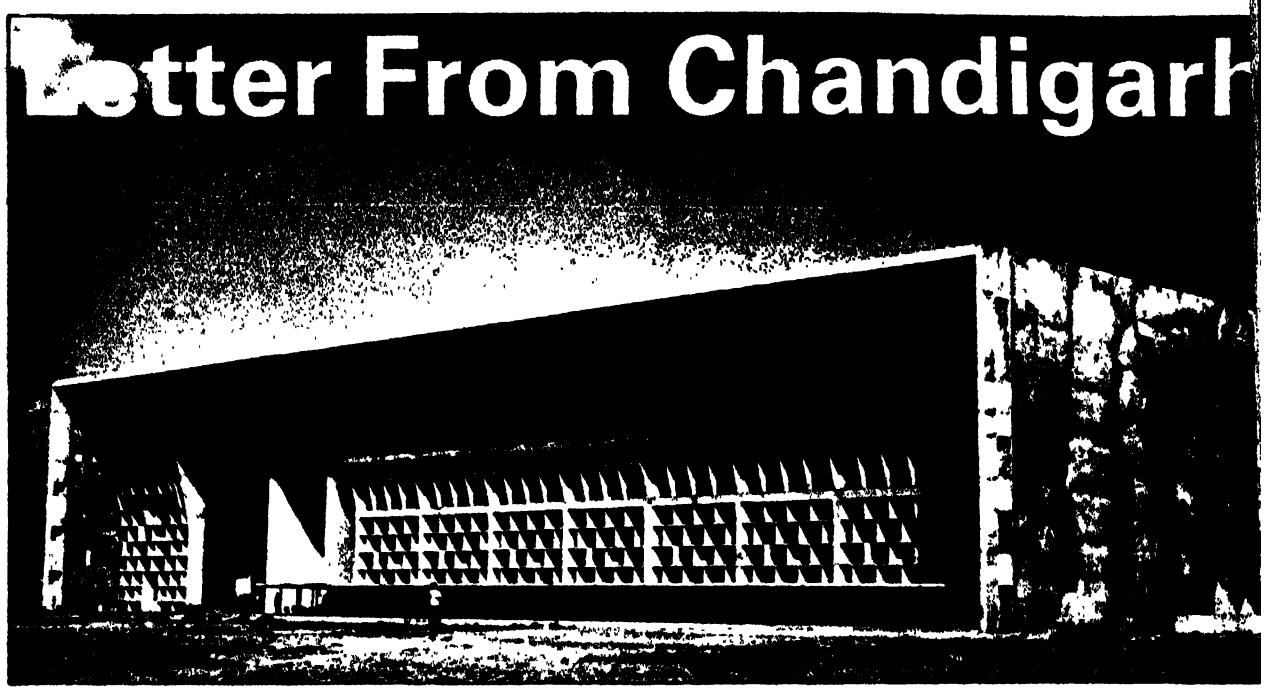
CITIES were once internationally listed in terms of population—the more people, the bigger it was said to be, it being taken for granted that demographic size also implied equal facilities and opportunities. Not any more. If Calcutta faces a water shortage, for instance, it is because some of the available supplies are at last being thoughtfully diverted to slums. Here, additional population means further strain on minimal facilities already at breaking point.

So the announcement by the Calcutta Metropolitan Development Authority's chief executive officer, Mr M.G. Kutty, that the present 10.3 million population will rise to 14 million or more by the end of the century is enough to strike terror into every heart. The CMDA's ambitious development projects and 18 sub-plans notwithstanding, land, water, food, transport and jobs are all likely to be in acute short supply.

Other cities expand, laterally or vertically. But ever since partition, Calcutta has crammed more and more people into the same small, squalid space. From being one of the world's largest and most important metropolises, it is rapidly degenerating into a vast suppurating slum.

Sumita Sandilya

Letter From Chandigarh



A MARXIAN thinker, Max Adereth, has observed that "even if we ignore politics, politics will not ignore us." That is, of course, in essence, a philosophical statement, for politics in the larger, existential sense is part of the human condition, and has increasingly invaded our private lives, our hearths and homes. So, if the Punjab issue is still the burden of our song, it is because there's no getting away from it. It has already created a psychological cleavage between community and community, between region and region, and now it's beginning to violate personal friendships, family loyalties and even neighbourly relations.

And this brings me to that elaborate charade called the Centre-Akali parleys. The long protracted exercise in which the Centre yielded an inch one evening to recover two or more next morning was, of course, none too subtle a way of exhausting the adversary, and the cynics may be pardoned for the view that the theatre of parleys was never more than a game of chess at one time, and pure theatre at another. To be sure, the "players" went through all the prescribed rituals and rules only to establish their credentials, but not even the innocents abroad were deceived this time. Assam was already a classic example of political prevarication stretched out to tragic lengths, where the theatre had turned into a grim reality.

There is, however, one moral which may not be lost even upon these political Poloniuses. The Law of Diminishing Returns sets in sooner in the field of homilies and truisms than is commonly imagined. It's time, then, the Centre realised that enough is enough, and that brave words will butter no parsnips. Even some of the concessions on a few peripheral religious demands appear no more than a diversionary ploy. Let me add in the end that the state is not for burning, and that there is no need to revive the sad comedy of words and gestures. A clean and clear decision is needed—a decision based purely on morality; truth and justice. If it hurts a section of people or a state, so help us God!

Exhibitions And Fairs

EVEN as Punjab and Haryana fight for the body and soul of Chandigarh, the city continues to attract a host of national-level shows, exhibitions and fairs etc. And once one is inside that charmed circle, the petti-fogging politicians seem suddenly to become irrelevant and silly. And thus to the grand show mounted by the Kennel Club of India. Here we had beautiful specimens of canine culture from all over India, all spruced up in their natal coats and tails, conscious of their pedigree and class. The two top-award exhibits—an Irish setter from Bangalore answering to the patrician name of Caspians Art Egall and an Afghan hound sporting the royal name of Sher Shah, and belonging to the House of Baria—were truly noble in appearance and aspect , one in a rich dark coat of brown, shining, velvety hair, and the other in its snow-white glory of fur and flounces. The dog-lovers who had thronged the Leisure Valley to see their pets bark and snarl, saunter and preen, got their time's worth.

Within sniffing distance of the hounds was another all-India show—"Graphics 82"—put up inside the Art Gallery of the State Museum. It was, indeed, a very impressive turn-out of etchings and prints. This medium is uniquely suited to the requirements of certain imaginations, and one is fascinated by the infinite variety of its range and reach. The lithos and the silk-screen prints and the plywood specimens allow for all manner of experimentation. Inventive fancy seems to have full play. Some of the outstanding exhibits such as Amitabh Banerjee's "Residual Glory", Anupam Sud's "Shifting Hulo", S. Sham Sunder's "Alienation I" and Anu Gupta's "Heminidae I" reveal how stylisation in this genre has reached a point where it attains the quality of vision.

Talking of etchings and drawings takes me to the work of Ernest Albert, a drifting aesthetic sensibility on the Chandigarh art scene. His show entitled "Ensemble II" had, in view of his background, distinct echoes from Greek, Egyptian and Christian myths. In one of his more ambitious drawings, a centaur and a woman are caught in that archetypal situation which brings even the supine woman to a passionate pitch, as magnetic waves of libidinous energy pass through her frame. In another piece entitled "Estranged", levels of alienation between man and woman—two nudes in outline—are achieved through a simple statement in straight but terraced lines. The collages too, maintain a certain kind of artful simplicity.

Another one-man show in town lately was the exhibition of Dev Inder Singh's highly imaginative and sensitive photographs. He, too, brings to bear upon his work an eager and involved imagination. There is a vein of lyricism in his flashes and compositions, and his eye roves over hill and dale, over human forms in varying aspects of innocence and experience. In one of the exhibits, he catches feelingly, a scarred torso in wood, showing the ravages of wind and water. Similarly, in several other pictures, the camera takes in quietly, unobtrusively, a sylvan scene or a figure in repose, to lend his work an air of serenity.

"RAVAGES OF WIND AND WATER", one of Dev Inder Singh's exhibits.

Two other grand functions were "Jhankar '83"—an all-India 3-day student extravaganza of song, drama and debate, and a delightful *pot-pourri* of music and dance and theatre, organised by the Punjab Sangeet Natak Akademi. The latter presented a pick of top-award items selected from the annual youth festivals of the universities in the state.

Winter Shows

AND finally to two of the most prestigious Chandigarh shows of the winter months. The IIth National Book Fair organised by the N B T was appropriately inaugurated by Amrita Pritam, and got off to a splendid start. The Chandigarhians who boast of being the most literate folk in the country, thus, had a grand eyeful of books—over one lakh—displayed in colourful stalls for a period of II days. In all, 187 participants carted their stuff from all over India to give the show an air of national culture. The leisurely, browsing crowds of spectacled senior scholars, and "jeaned" girls and boys, and matronly ladies with toddlers in tow did warm one's heart, though the final figures regarding the sales did not make very happy reading. And for this, the buyers alone were not to blame, though the book-buying habit has yet to strike deep roots in this part of the country. Even important paperbacks from abroad now seem to be slipping out of one's reach. Of course, there were some throw-away bargains, and one of the fastest disappearing volumes was *A Pictorial History Of Indian Cinema* (Hamlyn, London) by Firoze Rangoonwalla—a hard-cover, lavishly produced book. Most of the leading Punjabi publishers were not represented however, much to my dismay.

There is no event in Chandigarh more keenly looked forward to than the annual Rose Festival. It is truly the pride and glory of this queenly city. It compares in spirit and ambience with the city festivals organised in places like Munich, Edinburgh etc. The whole town turns out in their beauteous best goes gay, keeping "their blues" unde pillow for a couple of days. I think then pastoral feeling in man which seeks an e in such festivals. So, we had "roses, ros the way", here in Asia's biggest rose ga Of course, there were all types of v flowers and ferns in addition to the ri roses in all conceivable colours and vari but "the king of flowers", no doubt, "court" everywhere, and was toaste along with band and bunting. And wh crowd it was. on those two March mor of cool and fragrant air—the gay food and vendors, the marquees and the spouts, the angelic kids in frocks flounces falling over one another in a l be named "the Rose Princess" and Rose Prince"! And then, there wa exciting and imaginative Rose Quiz ducted by that old rosarian, Dr Khanna God knows how, had collected su formidable *rosiana*. No wonder, the ros charmed not only kings and queens, l and poets, but also mystics and divin embodies *the vision beatific*.

The festival evenings, as usual, were to music, and a 15,000-strong aud wrapped in woollens and shawls under starless sky sat through for more th hours each day to applaud the celeb singers commissioned for the occ While Manna Dey had some momen glory, clearly the songs served on evening didn't, on the whole, bring ou best in him. His voice modulated to classical tunes doesn't have the ki warmth and richness and depth we ass with singers like Mukesh or Kishore K Kavita Krishnamurthy, on the other rendered mostly borrowed songs, th Lata's classic *Aa ja re, main to... Madhumati* was authentic enough to nostalgic memories. The *qawwali* ar Aniso Sabri and Majeed Shola, shared ours on the second evening, thoug former, for all her personal charm, co produce the range and the variations more experienced compatriot I mus though, that the compère on the ope day, Mr Khurana, did not go well wit aesthetic spirit of the festival, for c self-directed jokes and innuendoes were and in poor taste. A festival of this s needed a far more accomplished p However, the Master of Ceremonies, o man behind the whole show, Mr J.S. seems to have imbibed the whole cult roses and attar over the years.

BLOOD AND GORE. The country has never before witnessed killings of the kind that took place at Nellie in Assam.

BLEEDING ASSAM

THE worst predictions—of a "bloodbath" and of the "movement against aliens going out of control"—made by the Assam agitation leaders when their talks in New Delhi failed have come true. Before the leaders arrived in Assam, the troops were landing at Gauhati airport. And the leaders were arrested the moment they set foot on Assamese soil. Thus began a bloody chapter in the history of the State based on a grave miscalculation.

The Centre must have thought that the movement had already waned and that it could pre-empt any action on the part of the Assam leadership. Subsequent events proved this to be a wrong strategy. The arrest of the leaders was the spark that ignited smouldering sentiments and the Assamese responded unanimously to the call of non-cooperation given by whatever was left of the State leadership.

A leaderless agitation is like a rudderless ship and that was what happened to the agitation; the passage of each day saw the rudderless ship drifting to ever new and ever more stormy seas.

As soon as the top men were arrested, the second line of leaders went underground and, despite its all-out effort, the administration could not nab them. These leaders directed the agitation as best as they could. But it was the third line of leadership, comprising at its best hawks and at worst goondas, which took charge of the situation to fish in the troubled waters. A clear proof of this was available at some places where the Assamese Hindus themselves were under attack. When asked as to why they had burnt bridges and destroyed ferries, they replied that that was the handiwork of saboteurs and they actually repaired these.

It became difficult for newsmen to keep pace with the rapidly changing and thoroughly confusing situation, specially in view of the complete breakdown of the communi-

their identity. The foreigners and the Bengali Muslims felt they would be thrown out if the Assamese could prevent the holding of elections.

The people most afraid were those in the minority pockets, that is, the Assamese Hindus in areas surrounded by immigrants and vice versa. They migrated to the areas dominated by their own factions as fast as their legs could carry them.

The agitators were overawed by the security forces, particularly by the CRPF. The security forces, too, had their fears; their deployment in threes or fours during election duties could result in their men getting killed by crowds armed with lethal weapons.

The employees were afraid of dismissals, break in services and salary cuts and the employers feared reprisals by their own employees.

The polling officers coming from other States felt like sacrificial lambs and refused to perform duties without full escort.

Police forces of all descriptions—CRPF, BSF, RAC, PAC, PAP, etc—were available in strength but all of them put together could not contain the violence from spreading and taking a heavy toll. At places the Army had to be called in. But all this was of little avail.

From Mangaldoi the violence spread to parts of Boko and Gohpur. At Chamarya (in Boko), the immigrant Bengalis set the houses of the Assamese on fire and killed an old woman and two teenaged girls on February 12. "Assam is under death sentence," said a badly battered Assamese to me.

At Gohpur some 40 villages were burnt and 100 people (according to an unofficial initial estimate) died in clashes between Assamese and Bodo-Kachari tribals.

Violence had by then spread to many parts of the State. Assamese complained bitterly that their State was burning but, like Nero, New Delhi was intent on seeing through the completion of the process of elections. The process was completed, but at what cost!

All these days, the Assamese policemen had remained under tremendous strain. Despised by their own people, distrusted by

days afterwards, the scenario was that of relative calm that perhaps lulled the authorities into underrating the feelings of the Assamese and the tempo of their movement. One might say, even at the cost of being misunderstood, that the instances of "Janata curfew" and non-cooperation that the Assamese resorted to evoked nostalgic memories of the days of the freedom struggle.

Violence started as the date of the filing of nominations drew close. It was the inevitable result of the Government's determination to hold the poll and people's determination to stall it. Beginning with the burning of bridges and the kidnapping and killing of candidates and their supporters, the violence went on increasing.

The violence of each day paled before that of the next day. There were skirmishes and bloody riots of all descriptions—linguistic, ethnic, communal and rioting for the sake of rioting. Small figures of killings ceased to hold any meaning—the casualties rose from tens, to hundreds and finally to thousands. The cops who were supposed to keep a record of every bullet fired found it difficult to keep count. One heard a crescendo of gunfire and saw villages burning all around. It was as if an era of nihilism had dawned on the soil of Assam.

The riot—and the riots—once again started with Mangaldoi. (It was this place which had sparked off the agitation against foreigners in 1979 when over 47,000 voters on the electoral rolls for its byelection were proved to be foreigners.) Fifteen persons were killed in the first four days of February. I saw as many as six buses and a car completely gutted on a 2 km stretch of the approach road to the town.

Soon the scare engulfed the entire State, particularly the rural areas. Guns, spears, "daos", bows and arrows were trained at each other by different factions. The

nevertheless worked well after their initial wavering. At Goalpara, perhaps, they had lost patience as they saw many villages burning but were asked to accompany the polling parties.

According to the polling officers present at Goalpra at the time, it was plainly a mini-revolt in which the Assam armed police men refused to go with the polling parties, beat up their SP and shot four CRPF personnel and one RAC (Rajasthan Armed Constabulary) man when they tried to intervene on February 16. But for the timely arrival of the Assam Police and CRPF top brass, the situation would have gone out of control.

Two days later came the shocking news of the massacre of "foreigners" in Nellie and the adjoining villages of the notorious Nowgong district. In the orgy (perhaps the Assamese reply to the Mandai killings), a number of villages were reduced to ashes and their population done to death. Estimates of the death toll varied between 500 and over 1,000. The administration did its best to remove corpses, but even three days after the carnage when the Prime Minister visited the relief camps, bodies were still lying around.

In one village, bodies of two infants—one wrapped in a bloody gunny bag—could be seen lying by the side of road. Perhaps in the face of death, some mother had pulled them away from an inferno. All that Maulana Hafiz-ur-Rehman, an *Imam* and school-teacher of Nellie, could remember was the shrieks of the dying and the war cries (*jai aae Asom*) of the Assamese and then all hell was let loose on the settlement.

It is said that a large number of villages of the Assamese, too, had been effaced in the area beyond Kampur in south Nowgong. "If you want to see Bangladesh within India, go to these areas but we know that you dare not do so," said agitators in an open letter addressed to "dear jawan brothers of the CRPF and BSF".

What had happened in Assam was like the repetition of the Partition experience minus the transfer of population. And the last word

In The States

obacco Workers et A Raw Deal

EDABAD: The Kaira district in Gujarat tobacco growers' paradise: it yields lievably rich harvests of this cash crop. ever, to the 20,000 women employed to ss the tobacco leaves, it is a veritable The Mahila Seva Trust of the district ntly conducted a socio-economic survey his region in conjunction with the en's wing of the Ahmedabad Majdoor h. The picture that has emerged from survey is a grim tale of poverty and sitation.

ere are 720 tobacco sheds where the en employed have to crush, grind, sift pack the tobacco for sale. The surveyors d that only 199 sheds have been reg- ed under the Factories Act. Owners of emaining 521 sheds keep the number of loyees in each shed below 20 so that successfully avoid paying provident and other benefits to their employees. e 60 per cent of the workers are in the age group 18-40, 12 per cent of all the women are below 18 years of age; this means that the employers are also breaking the laws relating to child labour. Moreover, 88% of all the women are illiterate, the others have received only primary education, which makes it easier to exploit these simple folk.

These women work for 8 to 10 hours each day. When the workload is greater they have to put in extra hours. Fears of being retrenched always stops them from protesting since they are totally at the mercy of the contractors and the employers. (The contract system exists in 45% of the sheds.)

The picture is gloomier still: with an average of five per family, the annual income of 85% of the families does not exceed Rs 2,000. Bare necessities eat into 85% of their earnings, 7% of which they spend on medicare (only 3% on education). This is not all. Forty-eight per cent of the families are in debt, for which they are being charged prohibitive rates of interest by the sharks: keeping body and soul together is a very difficult proposition.

Only 34% of the women are paid minimum wages, the rest are largely deprived of their due share. Casual leave is granted to only 44 per cent of the workers, 56 per cent of the women are denied even this facility. When they go on maternity leave they are even denied their wages for the period. Their employers are totally indifferent to their miseries.

As though this were not enough, their working conditions are extremely poor. Their job in itself is hazardous in that they touch and inhale powered tobacco which causes irritation of the skin and affects the lungs. They are not supplied with socks, shoes, eye glasses or grinding machines that will save them strenuous work in the shed.

Most growers have employed women in their sheds in an attempt to prevent trade unionism but even they are now becoming increasingly assertive of their rights and demanding minimum wages and healthy working conditions. An instance of this awakening among these illiterate women is that 44 per cent of them have planned their families using contraceptives to check growth and space their children.

Despite small families, however, they find it extremely difficult to make both ends meet. Unless there is a stricter implementation of the law on wages and occupational health, their interests cannot be safeguarded and their plight will continue to be miserable.

Kaushik Joshi

TIFUL EXISTENCE.

...And Beyond

he CPI's Dilemma

HEN CPI general secretary C. Rajeshwara Rao unconditionally rejected t academician Professor Rostislov ovsky's suggestion that there be a ic revision of the party's present line of t opposition to Prime Minister Mrs. Gandhi, several eyebrows, including of seasoned political commentators, raised at this unexpected and unheard I-CPSU confrontation.

fessor Ulyanovsky found in Mrs Gandhi the Congress (I) a "relative historical essiveness" and advised the Comsts to rally behind her in forging a unity forces that are against secularism and nal integrity. Dr Ulyanovsky conceives forces as the "right reaction", assumat Mrs Gandhi is no rightist. But the CPI ders the internal policies of Mrs Gandhi different from what a rightist Govern- would follow and hence refused to se the Ulyanovsky thesis.

did this happen overnight? After all, CPI Central Secretariat waited for six s after the publication of Ulyanovsky's (*Indian National Congress: Lessons of lution in Asia and Africa Today*, Nov 9,) before making their statement. Mr Rao n the meantime made a trip to the USSR g the 60th anniversary celebrations of October Socialist Revolution and had d the point with top leaders of the Communist Party of Soviet Union (CPSU). He is believed to have made it clear to CPSU leaders that these types of discourses inhibit the CPI and stop it from regaining the influence it wielded earlier and that the CPSU should, in the interest of a fraternal party, exhibit restraint in the airing of its views.

Later, a politburo member of the CPSU, Mr G. Aliyev, who drove along with Mr Rao to the Vankuvo airport, assured him that in future Soviet opinions would not embarrass their "Indian comrades". That is the reason why the CPI leadership after six weeks of dilly-dallying ultimately came out with the statement "...The Soviet academicians express their personal opinions freely on various issues through their articles and publications. Sometimes they even contradict each other and express views which do not reflect the opinion of the CPSU leadership. Professor Ulyanovsky's article is one example of this. *It goes without saying that our party does not agree with him in his assessment and conclusions on the current Indian situation as expressed in his article*." (Emphasis added).

The CPI statement is a clear indication that there are scholars in the USSR who totally oppose the Ulyanovsky thesis. But who are these academicians? These scholars who think differently formulate such policies that are more attuned to the CPI(M)'s way of functioning than the CPI's. The CPI, however, disagrees only with Ulyanovsky's assessment on "the current Indian situation" and not the rest of his suggestion.

Dr. Ulyanovsky believes that in 1969 the Congress split was between the non-monopolists (led by Mrs Gandhi) and pro-monopoly capitalists (led by Mr Morarji Desai). The CPI,and to some extent the CPI(M),held a similar view. Its Central Secretariat member, the late Mr Bhowani Sen, had written in a pro-CPI New Delhi weekly that there had been a class differentiation in the split.

During the Bhatinda Congress meet in 1978, the CPI in a classic bit of self-criticism obliquely admitted that the 1969 split did not mean that the monopolists had altogether forsaken Mrs Gandhi. But Dr Ulyanovsky is yet to revise his opinion and he believes that Mrs Gandhi and her party represent the non-monopoly sections. This is contrary to the CPI's fundamental ideology. Yet the party leadership did not make any mention of this while rejecting the Ulyanovsky line.

Scholars in the USSR to the left of Dr Ulyanovsky think that the CPI should not change its present political affiliations. Some of these scholars are Dr Rachik Avashev, Dr Kiva Maidanik, Dr Karen Brutents, Dr Moi Volkov and Dr Nodari Simonia. Dr Rachik Avashev, Dr Kivo Maidanik and Dr Tatyana Pokatayeva, in a paper published nearly a decade ago in *Social Sciences* (1974), said that the countries in the developing world adopting the capitalist way are "dependent economies" and subordinate components of the "world capitalist economy". (In other words, these countries are subordinated to the "neocolonialism" or rather "invisible imperialism", ruled by the transnational corporations).

Dr Brutents wrote a treatise in the mid-sixties wherein he stated that "the national bourgeoisie ceases to be a revolutionary

LENIN: moving away from his teachings?

force as a class". The CPSU bosses were shaken by this theory but could not reject the thoroughly researched study. But the publication was held up for nearly a decade and but for the reversals in Egypt and Syria, might never have seen the light of the day.

Moscow had pinned unusually high hopes on the non-proletarian and petty-bourgeois masses in the newly independent nations. The publication of Brutents' treatise *National Liberation Movements Today* was the beginning of a new chapter in the gradual process of a return to the orthodox views held by Joseph Vissarionovich Stalin.

Dr Brutents' theory seems to be gradually penetrating into the thinking of some of the top CPI leaders like Mr Jagannath Sarkar, Mr Indradeep Sinha and Mr A.B. Bardhan, all members of the Central Secretariat. Mr Bardhan and Mr Sarkar have referred to Brutents at several general body meetings in an attempt to put down the Dangeites within the party. But Mr Rao, for tactical reasons, has not yet used the Brutents line to make his point.

However, inside the CPI there has been a very small but prestigious band headed by Dr. Ranen Sen, former AITUC President and Secretary of the West Bengal State Council of the party, which has held similar views practically since the late sixties. Concentrated mainly in West Bengal, they have their followers in Punjab (Satyapal Dang), UP (Dr Z.A. Ahmed) and Maharashtra (Mr Bardhan). Some of the prominent theoreticians of this group are Professor Narahari Kaviraj, Mr. Satyendra Narayan Majumdar and Mr. Tushar Chatterjee.

C. RAJESHWARA RAO. Between the devil and the deep sea.

When the CPI had split in 1964, these scholars sat on the fence and joined the party on condition that they would be allowed to publicly air their views. They have always warned the party leadership against hobnobbing with the Congress and have always totally opposed Mr Mohit Sen, a staunch supporter of the Ulyanovsky thesis, who wrote in a pamphlet (*Aspects of CPI Programme*, a CPI publication, 1966): "... the sharing of leadership as well as of power between the working class and the non-monopoly sections of the national bourgeoisie is a specific aspect of the concept of national democracy as applied to Indian conditions". Mr Sen, it may be noted, was the chief theoretical-ideological consultant for Mr Rao until March 1977.

This group pointed out in several polemic articles and speeches at party meetings and debates that the idea of making the national capitalists (non-monopoly bourgeoisie, described as an exploiting stratum in the CPI programme) the leaders of the national democratic revolution has nothing in common with the Soviet or any international Communist understanding. Dr Ranen Sen informed a number of State Council meetings that Lenin had never allowed any section of the bourgeoisie to be even a part of democratic revolutions of new types. Prof. Kaviraj had told a meeting of the WB state council of the CPI that the idea ran counter to Lenin's *Two Tactics of Social Democracy in Democratic Revolution*.

The CPSU theoreticians said the same thing in different words, while academicians like the late Konstantin Zarodov, G.Kim, Nikolai Inozemtsev and M. Volkov stressed the growing differences among the non-proletarian masses. The Bengal group refers frequently to these cardinal points that Mr Rao seems to have so far ignored.

Today, Mr Rao appears hesitant to seek the help of these scholars in his war against Dangeites both within and outside the party or of facing up to stalwarts like Dr Ulyanovsky and Dr V. Pavlov. At the same time, he is apprehensive of making use of the theories of Dr Brutents and Dr Volkov (who in a paper published in *Social Sciences* in 1981 warned about the dangers of "sub-imperialism" in those developing countries which have developed a middle-level capitalist economy: this was an obvious reference to India).

Furthermore, the CPI chief never knows the limits of laxity (and not just freedom) allowed to Soviet academicians and commentators. Even after Mr Aliyev's assurance, in January, *Selskaya Zhizn* (Rural Life) a largely circulated newspaper carried a report saying that the Congress (I) defeat in the Andhra Pradesh and Karnataka State Assembly elections was the work the US Central Intelligence Agency (CIA). This assessment is the exact opposite of the CPI's. The Soviet media has thus objectively made the CPI a tool of the CIA since in Karnataka, the Janata-Kranti Ranga alliance has the support of both the CPI and the CPI(M). The dilemma the CPI faces is quite complex and not so easily resolvable

The Ulyanovsky proposal is nothing new since the Communist Party after the 1964 split and particularly since 1970, has followed a line in keeping with the Ulyanovsky thesis. Mr Rao has no one strong enough to back him up. Moscow's dual role has also thrown him into confusion.

The CPI central secretariat thus issued its statement at the risk of a cold war with Moscow: "Our party, as every other Communist party, chalks out its own political policy, applying the principles of Marxism-Leninism and proletarian internationalism to the concrete situation of our country."

Maybe the day is not far off when Indian Communists will stop opening their umbrellas merely because it is raining in Moscow.

Prakriti Bhadhuri

Dateline New Delhi

by G.S. Chawla

IS Prime Minister Mrs Indira Gandhi going to rely once again on the Intelligence Bureau which misled her in 1977 and once again in Andhra and Karnataka, Assam and Punjab?

According to some insiders, the Intelligence Bureau recently attempted an exercise on the chances of Congress (I) if there is a snap poll for the Lok Sabha. The sources say that the IB's rating is around 280 seats for the Congress (I) if the elections are held by early next year. In 1985, the chances of a victory may be very dim, it apparently believes, because, the law and order and price situations would have deteriorated further.

At present the Congress (I) has 355 members in a 544-strong House. Three seats lie vacant. In the Rajya Sabha, the party has 126 seats in a House of 244.

The IB, however, has always lacked an understanding of the situation whether in Andhra Pradesh, Karnataka, Assam or Punjab. What is the guarantee that it will prove right now?

PRESIDENT Zail Singh is setting precedents in the Rashtrapati Bhavan.

Recently he hosted a reception on the lawns of the Mughal Gardens in honour of Mrs Gandhi's selections the Chairman of the Non-Aligned Movement—the first time any Prime Minister has been publicly honoured by a President.

A big gathering of Central Ministers, senior officials and journalists attended the reception. Unlike his predecessors, Zail Singh not only received the Prime Minister himself but also personally saw off all the guests.

THE Government has accepted the Sports Ministry proposal to honour civilians who had made outstanding contributions towards the organisation of the Asian Games. The awards are likely to become a permanent feature, in the interest of encouraging sports in the country.

These awards will be different from those for Best Sportsmen and the like.

There will be three such special awards each year: the Ati Vishisht Sewa Award, the Vishisht Sewa Award and the Sewa Award. These awards will be accompanied by cash equivalent to the amounts drawn by the PYSM, AVSM and VSM award-winners in defence services.

The awards will be announced on the Republic Day every year along with other awards.

The Ati Vishisht Sewa Award and Vishisht Award will be presented by the President at specially convened ceremonies and the Sewa Awards will be presented by the Minister for Sports.

The Sports Ministry has not overlooked artisans and workers like carpenters and masons, who worked hard and long to complete the sports complexes in record time.

The Government has, on the Sports Ministry's recommendation, decided to institute Shramvir awards for such artisans and workers who have done outstanding work. These awards will be presented either by the Sports Minister or the Labour Minister.

The Asian Games organisation is busy preparing lists of people eligible for these awards.

RARE are the occasions when celebrities open up about their past and let the world in on their secrets. But Gulzar Singh Sandhu, this year's Sahitya Akademi award-winner for his collection of Punjabi short stories *Amar Katha* did just that.

In his speech at the award ceremony, Sandhu recalled how he became a writer. He said: "An incident at a private college where I was teaching turned me into a writer. I was suspected of having developed an affection for a student of the college. Fearing that this would bring a bad name to the institute, I was thrown out by the authorities. The events leading to my dismissal were interesting. I wrote of these, not so much as an attempt at writing but as a catharsis for my hurt feelings. And thus the writer was born in me."

Sandhu, a distinguished Punjabi writer, has published four short story collections. *Amar Katha* has been considered as an outstanding contribution to Punjabi literature for its delineation of the present-day realities, the joys and sorrows of the people, and its intensely emotional and intimate style.

GULZAR SINGH SANDHU. Allowing a glimpse into his past

BIHAR has the largest number of undertrails in the country—1,600 till June 30, 1982, according to official reports.

U.P. comes next with 149 undertrials who have been languishing in jail for more than two years. This is followed by Assam with 72 and West Bengal with 52.

This is in spite of the Supreme Court's directive to the State Governments, given in two separate judgements in April 1979. The courts said:

All States should consent to release all persons who have been in custody for over six months and whose trials have not commenced or against whom charge-sheets have not been filed except in cases covered under murder and dacoity. The investigation in the latter cases should be completed within two months.

The undertrial prisoners who have been in jail for a period exceeding the maximum term which could be imposed on them even if they were convicted of the multiple offences with which they were charged should be released forthwith.

All undertrial prisoners who are charged with bailable offences but who are still in jail, presumably because no application for bail has been made on their behalf or because they are so poor that they are not able to furnish bail, should be considered for release on a personal bond.

Undertrial prisoners who have suffered incarceration exceeding half of the maximum punishment that could be awarded by the court, might be considered for release on personal bond and counsel may be made available to them.

According to official reports, the number of undertrials increased during all the three years ending June 30, 1981 in Kerala, Rajasthan, Chandigarh, Goa, Daman and Diu and Pondicherry. In the remaining States, the numbers varied from year to year. ■

Festi

Rajasthan's Sheetla Festival

Summer is a time for rejoicing. And each year, with the passing of winter, Chaksu, an otherwise sleepy tehsil headquarters, comes to life and is the hub of activity. A fair is held here on Chaitra Krishna Ashtami, that is the eighth day of the dark half of the month of Chaitra. And, lakhs of devotees come from all over to seek the blessings of the Goddess Sheetla, says U.B. Mathur.

SOME thirtyfive kilometres from Jaipur, to the left of the Jaipur—Kota road, is a small village called "Sheel-Ki-Doongri" On the top of a hillock in this village is a shrine dedicated to the Sheetla Mata, a legendary Goddess who is believed to manifest herself casually, but in a virulent form of small pox

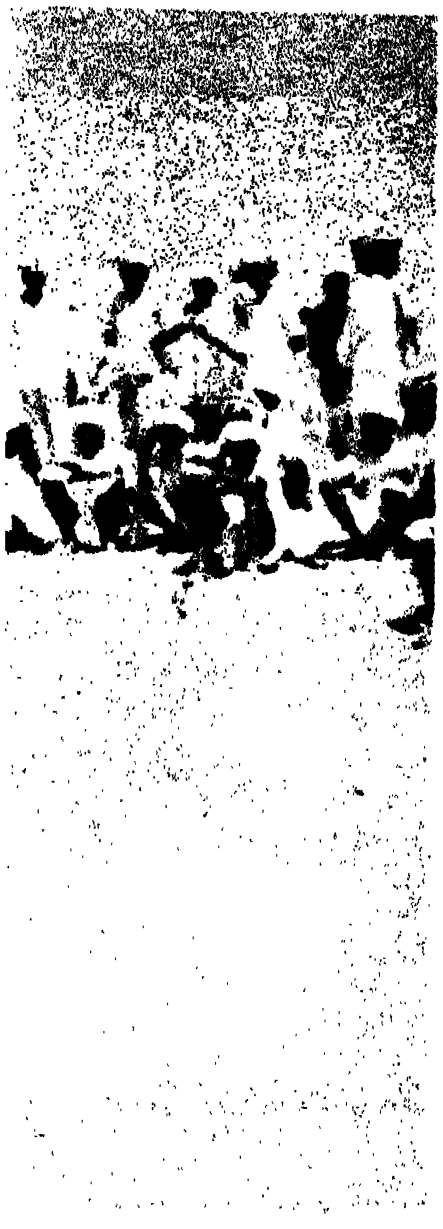
A fair is held here, each year in March/April on Chaitra Krishna Ashtami, that is the eighth day of the dark half of Chaitra, which is attended by over a lakh of persons The nearest railway station is Chaksu, the headquarters of the tehsil of the same name, which is about five kilometres from the shrine The fair at Chaksu lasts for about a week Visitors start arriving on the first day of the month They come largely by train and buses, but, the most spectacular of them, belonging mostly to the Gujar and Meena communities, arrive in their own, profusely decorated bullock carts and camels in fanciful multicoloured dresses

The devotees come to seek the blessings of the Goddess Some desire her to protect their children from all ailments, the childless pray for an issue, and the unmarried demand her favour for a suitable life partner Cultivators supplicate for her kindness in saving their cattle from her wrath

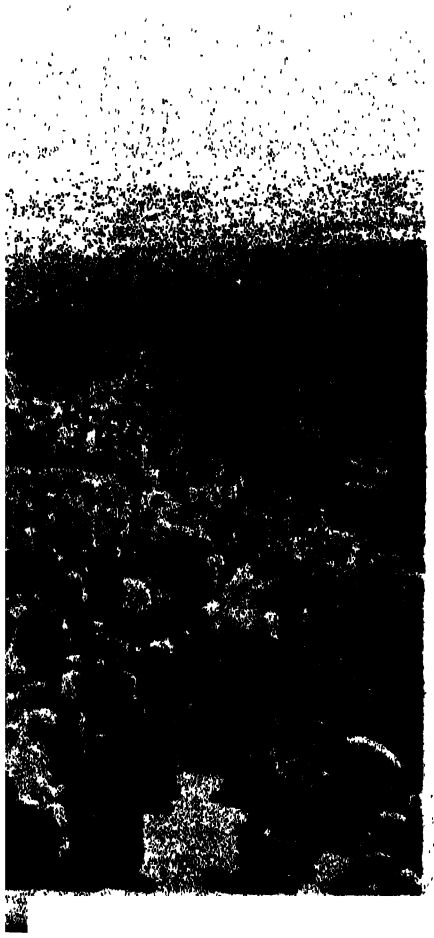
The shrine of Sheetla is a simple masonary structure. There is no image of the Goddess in the temple and the deity is represented by a piece of stone with pox-like formations on its surface.

The shrine of Sheetla is a simple masonary structure which is approached by a flight of steps There is no image of the Goddess in the temple and the deity is represented by a piece of stone with pox-like formations on its surface The priests of the temple, who are quite a few and belong to the Kumhar community, ordinarily take charge of the temple in turn, every fifteen days, so that each gets an opportunity to attend on the Goddess. During the period of the fair, however, they work as a team and offerings are all pooled and shared equally

The Goddess Sheetla is known by various names in Rajasthan viz, Mataji, Mahamai, Sed Sheetla and Sedal Mata. Sheetla comes from the word "Sheetal" which means cool, frigid and devoid of passion The eating of hot food, the drinking of liquor and indulgence in sex is, therefore, strictly forbidden on Sheetla Ashtami day. Since the food offered should be cold, celebrations for this occasion are spread over two days. The main festival is celebrated on the eighth day but the seventh day is equally important, as the food for the offerings to the deity is prepared on that day.



PHOTOGRAPHS BY M.D. SHARMA



However, if the seventh day of Chaitra falls on a Saturday, Sunday or a Tuesday, then the food is prepared a day earlier, that is on the sixth day of the month.

The propitiation of the deity is done in the morning, before the day starts getting hot. And the offerings consist mainly of sugar candies or drops, coconut, cooked food and curd. Cash is also offered.

The propitiation of the deity is done in the morning, before the day starts getting hot. The offerings consist mainly of sugar candies or drops, coconut, cooked food and curd. Cash is also offered. The offering of a piece of red cloth, jaggery and sweets called *Gulgulas* (preferably prepared a day earlier at the shrine itself) are believed to bring relief to the affected persons and t checkmate any future trouble.

The offerings made, the food is the eaten, cold. Very often this cold food distributed and exchanged amon friends and relatives. People are ve particular about avoiding anything ho They do not have tea or hot milk. The do not even use hot water for their bat They do not smoke. In fact, the faithf do not even light a fire on this day

There is a lively atmosphere aroun the temple during the fair and peop are seen singing and dancing to th accompaniment of drums. And, devo tional songs are sung.

This song describes the sentiment of a devotee:-

Holy Mother, on this day
I, thy servant, come to pray
Please to note I have donn'd new dre
In thine honour. Please to bless
All my children. Keep them free
from dread small—pox, Mataji.
Holy Mother, bless the cows,
So that milk abundant flows.
Then the children, growing strong,
Soon may voice their grateful song.

Lastly, Mataji, I pray
Please accept my gifts this day—
sweetmeats in variety
Made by these poor hands for thee

A CAMEL RACE. This is a common occurrence at this colourful fair (left).

TIME FOR A TETE-A-TETE. Women relax even as they join in the fun (below).

AN OPEN AIR AUDITORIUM. A village belle avidly watches spectacular sports (right).

That's Business

From Our Special Correspondents

MR RAM PERSHAD

IT will be quite some time before we hear the last of the Asian Games hotel fiasco. Surya Hotel, which was built in consultation with the well-known French hotel group, Sofitel, is understood to have presented the Asian Games Special Organising Committee with a bill of over Rs 15 lakh, contending that AGSOC must pay for the 150 rooms which were hurriedly readied under its diktat. As it happened, only 15 rooms were occupied. If the current mediatory efforts fail, the dispute may bounce into the court room

"I was a member of the Games Accommodation Committee and repeatedly told them that the existing hotels were adequate, but they laughed and sneered at me," says Mr Ram Pershad, Managing Director, Hotel Ambassador, and President, Federation of Hotel and Restaurant Associations of India. Like Mr Mohan Singh Oberoi, Mr Ram Pershad is a non-matriculate. Like him, he also started in Simla. And as in the case of his peer, his is also a rags-to-riches story, although comparatively a modest one. Expectedly, therefore, Mr Pershad knows the hotel industry inside out.

He thinks that for the next five years the Delhi hotel scene is likely to be marked by "unhealthy competition" in the form of tariff under-cutting and falling standards. But, first, let all the Asiad hotels be completed. Do you know why the Government has not followed up on its promise in Parliament to impose penalties on the laggards? Reveals Mr Pershad sheepishly: "There is actually no penalty clause anywhere."

'Selective Permission'

Bombay, on the other hand, presents a more balanced picture in regard to hotel accommodation, according to Mr Ramesh Khanna, Managing Director, Eastern International Hotels Ltd. Taking into account the additions that are under way—Centaur at

MR RAMESH KHANNA, Managing Director, Eastern International Hotels Ltd

Juhu, Leela Penta near the Sahar International Airport, and the new wing of Oberoi Towers—the supply and demand, he thinks, would, roughly, be matched. But he is dismayed about the granting of "selective permission" for building new hotels in downtown Bombay which involves "hera pheri" and oligopolistic exploitation.

But ask Mr Khanna about the benefits likely to accrue from the decision to categorise tourism as an export-oriented industry and the dismay erupts into fury. "Bullshit," he fumes. The jerky reaction is understandable. For nearly a year now he has been building Majorda Beach Resort in Goa but is without a telephone connection. "Each time we want to make a call, we have to walk 15 kilometres to the nearest post office." Nonetheless, such stepmotherliness has not discouraged Mr Khanna from planning to expand his existing 5-hotel chain, which includes the Holiday Inn at Juhu.

Statistical Confusion

The commencement of the next financial year on April 1 is round the corner. Why should the financial year be different from the calendar year, perpetually causing statistical confusion? Most eggheads in the Finance Ministry seemed to be stumped by the question. One, however, hazarded the explanation that the Indian economy is so heavily dependent on the monsoon, that how it fares can only be known after September. Even if this is so, why can't the budget be presented on December 1 and passed by December 31 so that the financial year can start on January 1? Perhaps it is a blinkered pursuit of a British tradition, just like left hand traffic.

Superior Air Compressors

From inflating the tyres of your car at the petrol station to making fertilisers to oil drilling, air compression is among the most

MR K.G. KHOSLA.

widely used form of mechanical power. Way back in the fifties, K.G Khosla, a young businessman, realised this and made full use of his Austrian contacts to get technology from the Vienna-based Maschinen Apparate Werkzung (MAW) in order to manufacture air compressors. Today, with a turnover of Rs 27 crore, K.G. Khosla Compressors Ltd is the oldest and biggest manufacturer of air compressors in the private sector, its main rivals being Kirloskar Pneumatic, Pune, Ingersoll Rand, Bombay, and Holman Climax Ltd, Calcutta

Since the private sector units do not ordinarily make compressors beyond 1,500 horse-power, compressors in the higher 2,000 hp to 1,500 hp range are left to the two public sector units, Bharat Pumps and Compressors Ltd, Allahabad, and BHEL, Hyderabad. If you need still bigger compressors—which are sometimes needed for making chemicals and fertilisers and for oil exploration—you have to import.

The conventional technology in compressors is obviously piston-based. But now Mr Khosla is bringing in the screw compressor technology from MAN of Germany. "It is far superior because there is virtually no wear and tear," insists Mr Khosla. While the parent unit near Faridabad will continue to make piston compressors, the innovative technology will be introduced at the company's three subsidiary units, two near Nasik and one at Sangareddy near Hyderabad. The Sangareddy unit will be 100 per cent export-oriented. Nearly 80 per cent of the money for the expansion programme will be raised from banks and public financial institutions.

Duopoly Created

Jessop of Calcutta and Mining and Allied Machinery Corporation, Durgapur, may not actually be in the red but have, for quite some time, been in the doldrums.

In order to help these two semi-sick public sector companies, the Central Government has created a monopoly—to be precise, a duopoly—for them by not permitting anybody else to enter the field of mining equipment manufacture. The Andhra Pradesh government wanted to set up a unit in collaboration with Babcock of the UK but failed to coax a licence out of the powers that be. The persuasive powers of MacNeill and Magor have proved equally inadequate.

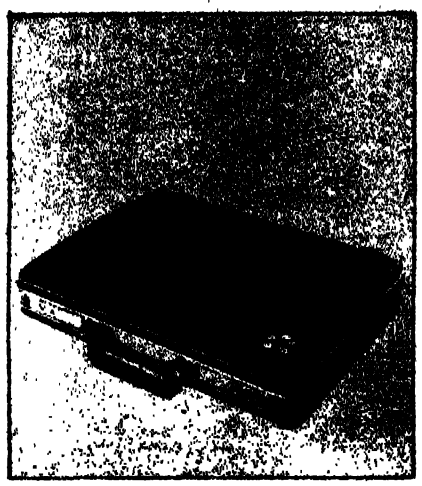
This Calcutta-based group, which now has only 26 per cent of British equity left, is taking large strides under the leadership of Mr B.M. Khaitan in converting itself from an agency house into a leading engineering organisation. By inviting the Worthington Group of USA, the world's largest manufacturer of pumps, to buy up the shareholding of Johnston Pumps of USA in its Panihati unit (near Calcutta), MacNeill and Magor has set up a new subsidiary called Worthington Pump India Ltd. "Technology is being updated with the assistance of Worthington and we will soon have the largest pump test bed in Asia," says Mr Khaitan. Another unit of the group, Flender MacNeill Gears Ltd, is coming up at Kharagpur in collaboration with Flender Gears of Dusseldorf, West Germany.

MR B.M. KHAITAN of MacNeill and Magor.

Mr Khaitan is among the few captains of the industry who has also been a captain on the sports field. His forte is golf and polo.

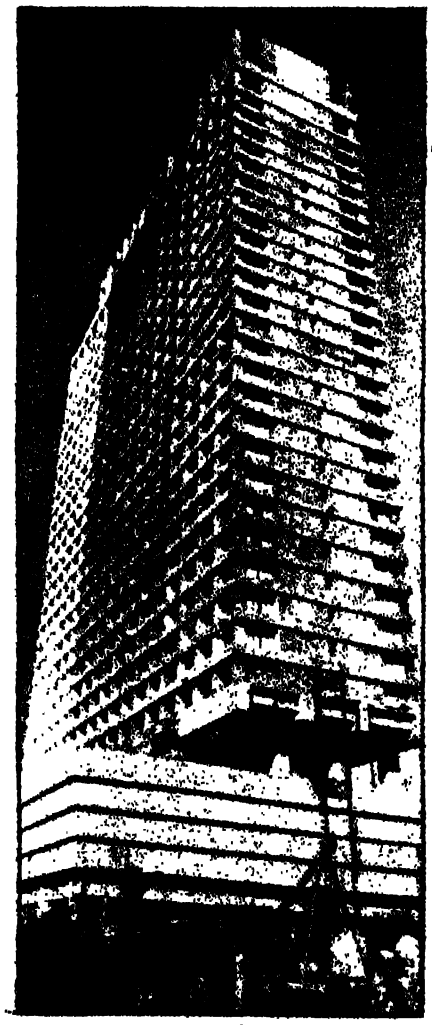
'Bribing' Journalists

Journalists have the reputation, not altogether unmerited, of being cheapskates. Give them a gift and their professional instinct is dulled. This time, at the Seventh Non-Aligned Conference, it was the VIP-brand briefcase, costing Rs 339, given to about 1,500 journalists. As a result, there



were no audible protests from journalists at the manner in which they were excluded from the conference venue like pariahs, ostensibly because of security but actually to deny them access to the delegates to find out what was happening. The computer provided for processing interview requests was also suitably constipated.

The security argument is nothing but gobbledygook, for how is a security-cleared journalist any more of a risk than an official? Some Spanish-speaking mediamen told me that the Havana Summit did not have the sort of news management witnessed at the New Delhi Summit. Arrangements at the adjacent media centre were, however, excellent.



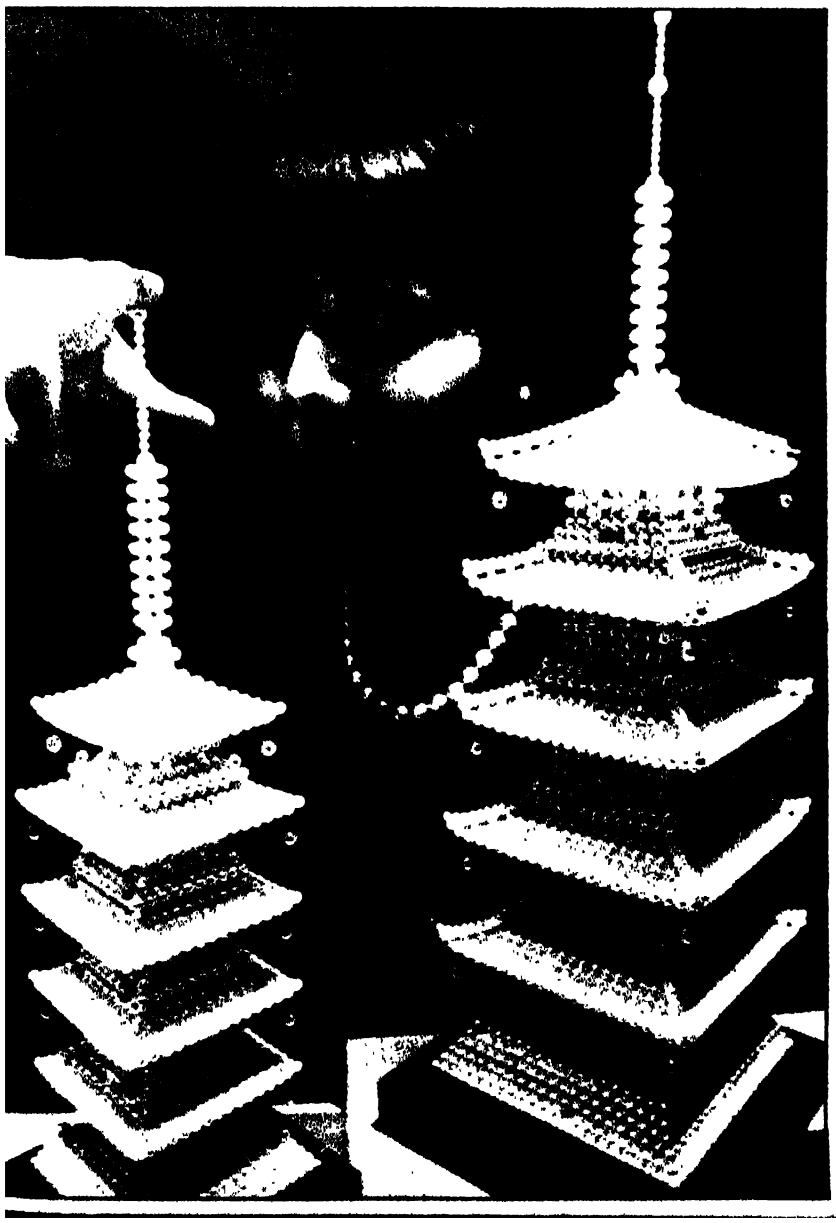
NEW WING OF OBEROI TOWERS, BOMBAY—ready at last.

THE WORLD AROUND US

ITH'S CARDBOARD CASTLE. Flt Lt Keith Hunter has designed this portable cardboard -man shelter which he will test at 14,000 ft, when scaling Manaslu North Peak, some 250 les from Kathmandu. The whole igloo-like structure is carried in a box only four feet by four t six inches.

THE THIRD "DIKSHANT SAMAROH" of the Nartan School of Classical Dances, Ahmedabad, will be celebrated on March 29, 1983. And, the eight students seen here will receive the title of "Nrityo Tirtho".

THE GOOD LORD MADE THEM ALL In a special programme, aired by Japan's Nippon TV Network, these 12 "exceptional" persons were on view. Seated left to right: (i) A woman with her body tattooed from neck to toe; (ii) India's Murari Aditya, the world finger nail champion; (iii) A man with 24 marriages and 40 children; (iv) He has had the biggest operation of all; (v) She has the biggest breasts; (vi) Her name has 103 letters; and (vii) A female Samson who lifts weights with her hair. Standing: (i) A yogi who can place himself in a small glass box and stop his heart beating for more than half an hour; (ii) The world's heaviest man, 365 kgs, with his wife; (iii) The world's tallest woman, who stands 7'8"; (iv) This moustache measures 72"; and (v) This strong man can bend and then wind around his neck a double iron rod.



◀ COSTLY EMBELLISHMENTS. It would cost you around $ 40,000, if you wanted to embellish your living room with this temple pagoda made of 8000 cultured pearls. Both this one and the smaller pagoda (left) were on displayed at the Munich Jewellery and Watch Fair.

ROMANCE IN THE AIR. Jean-Paul Belmondo, Jr, the 18-year-old son of the French actor, whose name has been linked with Monaco's Princess Stephanie for the last two years. ▶

Hunger Stalks The Third World

Alarming, anachronistic and an intolerable evil, was how FAO's Director-General Edouard Saouma described the worsening food situation. And the problem is especially acute in the Afro-Asian countries, where food production does not and cannot match the exploding population, adds Satyabrata Rai Chowdhuri.

A RECENT report released by the UN Food and Agriculture Organisation (FAO) says that the developing countries in Asia and Africa face the prospect of more hunger this year despite ample world supplies of grain. The report adds that according to latest estimates, world cereal output is expected to rise this year to 1,537 million tonnes from earlier estimates of 1,532 million tonnes. The figure was 1,516 million tonnes last year. However, balance of payments problems and a reduction in international food aid means that the developing countries will be unable to import the grain they require. The report indicates that the world trade in food grains is likely to fall to 207 million tonnes from 217 million tonnes last year.

Although hunger has been the common lot of a majority of the human race living in the Third World, today even a section of the people in the so-called First World are feeling the pinch. As recently reported by Mr Michael Simmons of *The Guardian*, in Britain, every self-respecting High Street now has its Oxfam shop, a style in patronage inconceivable a few years ago. At the national level, there has been a slow but steady proliferation of non-government agencies that care about the world's poor and hungry. Elsewhere in the First World, the same trends have been discernible.

A GRAVE SITUATION. In a large number of Afro-Asian countries, the food situation is growing steadily worse. For, while the food production grows by not more than two per cent a year, the population grows by as much as 4 per cent over the same period.

The situation has become so grave that in the last meeting of the FAO Council, held in Rome, Mr Edouard Saouma, its Director General, described the problem as alarming, anachronistic and an intolerable evil. Yet, the magnitude of the task is almost too big for the FAO to grasp. On recent Oxfam estimates, 90,000 people die of starvation or undernourishment every day — more than one a second, or a Falkland's death toll every quarter of an hour. One in four of the world's population—equalling the US, the Soviet Union, Eastern and Western Europe and few more besides — are not getting enough to eat to meet normal energy requirements.

The problem is most acute in those countries where the population is growing rapidly. In a large number of Afro-Asian countries, where the population may well be going up by as much as 4 per cent a year, meaning that 10 million today equals about 18 million in the year 2000, food production is growing by not more than 2 per cent a year.

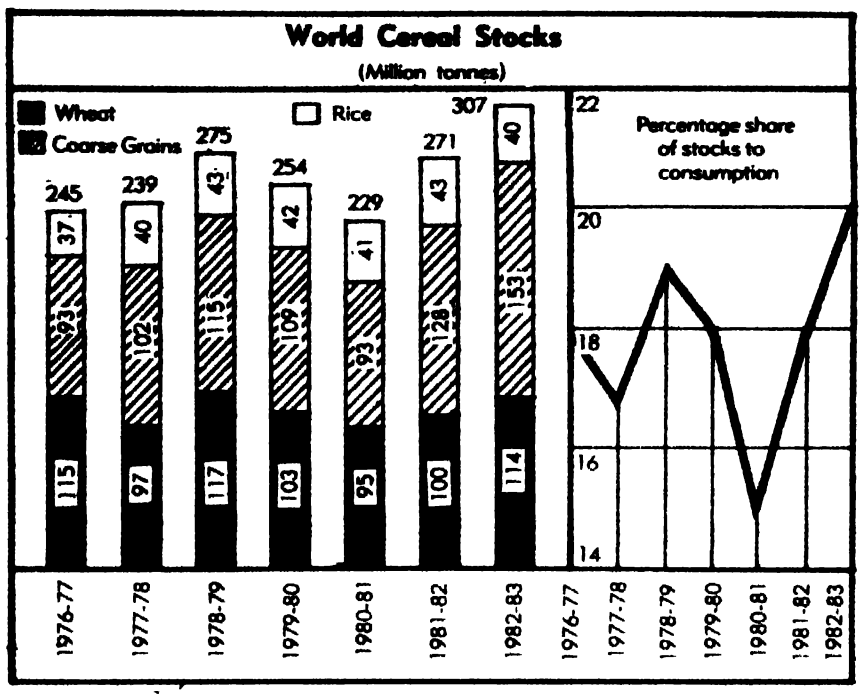
For example, to the 80 million people of Bangladesh, the world's eighth most populous country, the one or two good harvests in recent years are small consolation for the decline in the world market for jute and the country's inability to control its mounting population. The Nigerians, who are also faced with the problem of a rising birth-rate, are spending far more on food than they can afford. And they are only two of more than 30 countries thought to be in the same boat. Add to them the millions of refugees and the landless and the magnitude of the problem and the impending disaster become apparent.

Africa figures prominently in the atlas of disaster: famine in Uganda; continuing drought in Sahel, Djibouti, southern Ethiopia, Angola, Botswana, Malawi, Mozambique, Somalia, Zambia and Zimbabwe; the world's largest concentration of refugees; and the loss of self-sufficiency in Kenya and Tanzania.

Mr Saouma has warned that failure to provide adequate food assistance to the African countries may spark bloody riots that could topple governments. He also expressed concern over the reduction in US appropriations for international agencies. "The United States, the richest country in the world, spends 7 billion to 8 billion dollars a year on food stamps to help its needy citizens... there is no question the requirement is much greater in many of these impoverished African countries," he said. Criticising the bilateral approach in dispensing economic assistance, he pointed out that such an approach might serve the national interests of donor countries, but, if the trend toward bilateralism continued, it would only reduce the already inadequate share of the aid for food and agricultural development.

In his latest report on the world food situation, Mr Saouma said per capita food production in Africa had dropped by more than 10 per cent in 10 years. Twenty-three countries of this region are suffering acute food shortages, their plight compounded by rising foreign debts and a population growing at 3 per cent a year, now the highest in the world. This woeful situation is also partly due to the fact that much of Africa's best lands have been tailored to produce cash crops like sugar, coffee, jute and tea for western countries and not the cereal the Africans badly need to feed themselves.

Other areas of the Third World are in no better a position. Over a third of Asia's population consumes less than 75 per cent of the calories they need; just under a tenth of all Asians consume less than 50 per cent of their daily calorie requirements. One in every three children in Asia is undernourished and 4 per cent are on the verge of starvation. In Latin America, 10 to 30 per cent of the children are underfed, mainly in north-eastern Brazil, the Andean highlands, parts of Central America and the Caribbean, with Haiti suffering the world's worst rate of severe undernourishment — 7 per cent. "These emergencies," reports Mr Saouma, "are not only the result of a limited or temporary food shortage resulting from a natural calamity. The most disturbing are the requests for emergency food aid which are the result of man-made disasters, notably civil strife."



AMPLE GRAIN SUPPLIES notwithstanding, the prospect of more hunger faces the countries of the Third World

What Mr Saouma really means is that food is a political commodity and calls for political treatment, not merely technical or "pure economic" solutions This was clearly illustrated in September, 1980, when the European Parliament held a two-day meeting in Strasbourg to examine the problems posed by world hunger Jorgen Nielsen, a member of the Liberal-Democratic Group observed that a 30 per cent expansion of the area given over to agriculture in the Third World was possible, but, he pointed out, this was impeded by innumerable factors of a human, technical, financial and "political nature" which were holding up the expansion and modernisation of agricultural production in the Third World. His German Socialist colleague, Katharina Focke, was more explicit. "The European Community's food aid policy is still dictated by agricultural interests rather than any intention to promote development It is an ineffective way of distributing European surplus production to the poor countries, associated with high costs, countless mishaps, delays, wranglings over responsibility and bureaucratic obstacles."

Numerous instances can be cited to show that in contemporary international relations food is indeed a political commodity. The Commission on World Hunger, set up in 1978 by President Carter, once declared that there should be a ban on "the use of starvation as a method of warfare." Yet, President Carter's first reaction to the Soviet invasion of Afghanistan was to order an embargo on grain supplies to the Soviet Union. And a prominent Latin American journalist reported that the military rulers of Argentina refused to join the embargo as a "lever to coax Washington into helping them suppress publication by the Inter-American Human Rights Commission of a list of torturers and assasins." These are but two instances, yet, they serve to highlight the political dimensions of food.

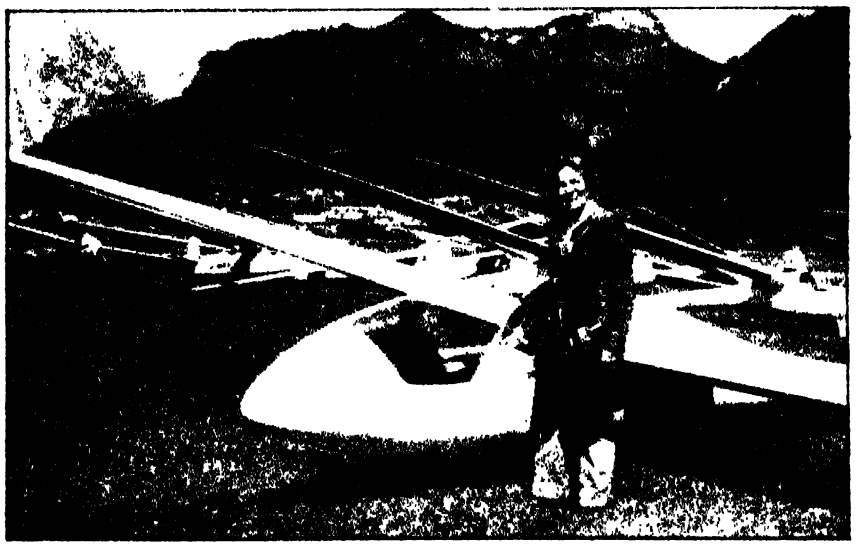
terests that control export of agricultur production." Furthermore, she says, ther really is enough food in the world to g around comfortably, right now. The world' grain production, she stresses, suffices t give each human being a daily calorie intak equivalent to that of the average Americar What prevents the distribution of the hug stock of grain among those who badly nee it is the concentration of world food produc tion and trade in the hands of a few: fiv multi-national companies control 90 per cer of the world's grain trade.

A recent report by the World Food Coun cil, established by the UN in 1974, links th "political sensitivity of food issues" with "th high and growing concentration of interna tional grain supplies in one geographic region (North America)" and "the danger to world food security from possible climati logistical or political factors." These are see

In contemporary international relations food is, indeed, a political commodity.

Frances Moore-Lappe, author, campaigner and one of the founders of the "Rome Declaration Group", an alternative to the FAO's World Conference on Agrarian Reform and Rural Development, argues that food aid increases the Third World's dependence on foreign assistance and aggravates the imbalance between food production and export crops. Food aid programmes, she points out, are normally directed to governments, and "the problem is that the people who make up governments in many Third World countries are those who are linked with, or are themselves the in as good enough reasons to call for th development of alternative sources of supp "particularly in developing countries."

The FAO has estimated that by the turn the century demand for food and other far products will double in the Third World - requiring an output, in terms of money, about 10,000 million dollars every year. they are lucky, they will get half that amour Though even this, will leave a huge defi and, worse, millions of men, women a children in the Third World will continue remain hungry



Hanna Reitsch

The Queen Of The Skies

I WAS introduced to the books of the French poet-pilot Antoine de Saint-Exupery by Hanna Reitsch. Ironically, Saint-Exupery, whose immortal sagas of aviation adventures have thrilled millions, was killed in an aerial dogfight over France in 1943 by a German fighter plane that may have been test flown by Hanna Reitsch who, during the second world war, was a test pilot with Luftwaffe, the German airforce. She was given the official title of Flugkapitan and she test flew almost all types of fighter and bomber planes including the earliest jets developed by the German scientists.

Hanna was seriously wounded while test-flying a German bomber. On her recovery she was awarded the Iron Cross First Class, the highest German award for gallantry, by Field Marshal Goering. She was the first civilian and a woman to receive this award.

She suffered another near-fatal crash while test-flying a Messerschmidt 163-A Rocket Plane that used to climb 10,000m, in 90 seconds. After this accident Hitler personally awarded her three Diamonds and Bar to her Iron Cross

In 1933 she created a sensation through out the world by flying the world's first fully controllable helicopter Focke-Achgellis inside the gaint Deutschland Hall in Berlin in front of 20,000 spectators.

Born on March 29, 1912, in Hirschberg in Germany, she joined the gliding club at the nearby town of Grunau. Her first flight ended in a crash. Braving the jeers of her male co-students, she continued her training to become the first woman gliding instructor in Germany. She set up several world gliding records between 1932 and 1938. Then she became the glider test pilot at the Gliding Research Institute at Darmstadt.

Today man has made innumerable flights in rockets, including those to the moon, but again it was Hanna Reitsch who test flew the first manned version of the famous V-1 Rocket. The landing speed of this rocket was so high, that out of seven ace test pilots who flew it, Hanna Reitsch was the only one to survive the ordeal.

Hanna Reitsch was one of the last few persons to meet Hitler. On summons from Hitler in April 1945, she flew General Ritter von Greim into the beseiged city of Berlin. She had to fly her small Feisler-Storch aircraft low, almost skimming the tree tops to avoid the Russian fighter planes.

When she entered the vicinity of Berlin she encountered heavy rifle and machine gun fire from the Russian field troops. The aircraft was riddled with bullets and General von Greim was wounded. Flying through the dense sulphurous gun smoke that lay over the devastated Berlin, she landed the plane on a street and took wounded von Greim to Hitler in his famous bunker in the Reich Chancellery.

Hitler praised her for her bravery and Hanna offered to take him out of Berlin in her plane. Hitler refused this offer saying that h had decided to end his life in Berlin.

Hanna Reitsch visited India in 1959 t present a German Glider K-7 to the India Government. The glider was received by th late Mr S.K. Patil, then the Minister fo Tourism at a function at the Delhi Glidin Club in which pilots of the club accompanie her in a show of aerobatics before 3,00 guests.

Prime Minister Nehru asked her to stay a his personal guest for a month. During hi stay in Delhi she regaled us with her fantasti adventures. While it was a privilege for m and other pilots of the club to fly with Hann Reitsch, VIPs who had joyrides with hi included Pandit Nehru, who was a glidin enthusiast himself, Mrs Indira Gandhi an her two sons Rajiv and Sanjay Gandi Perhaps both the brothers derived inspiratio to become pilots from her. Due to her effort the Federal German government invited si Indian glider pilots for a three month tour a German gliding clubs in 1960.

I received her last letter in January 197 with a photograph of her in her modern Cirru glider in which she used to fly over th snowbound peaks of the Bavarian Alps.

In 1978 at the age of 65 years Hann Reitsch did a flight of 800 km in a glide setting up world woman's gliding record c distance. It was feat a that required th greatest courage, skill and planning that onl Hanna Reitsch could do at that age. Sh derived her *elan vital* from spiritualism. Sh practised from an early age the teachings o St Francis Loyola, a Christian mystic whos techniques of controlling the mind and bod were similar to the yogic systems of Indic After her Indian visit, she became associate with the Ramkrishna Mission. She died o August 24, 1979.

Photofeature

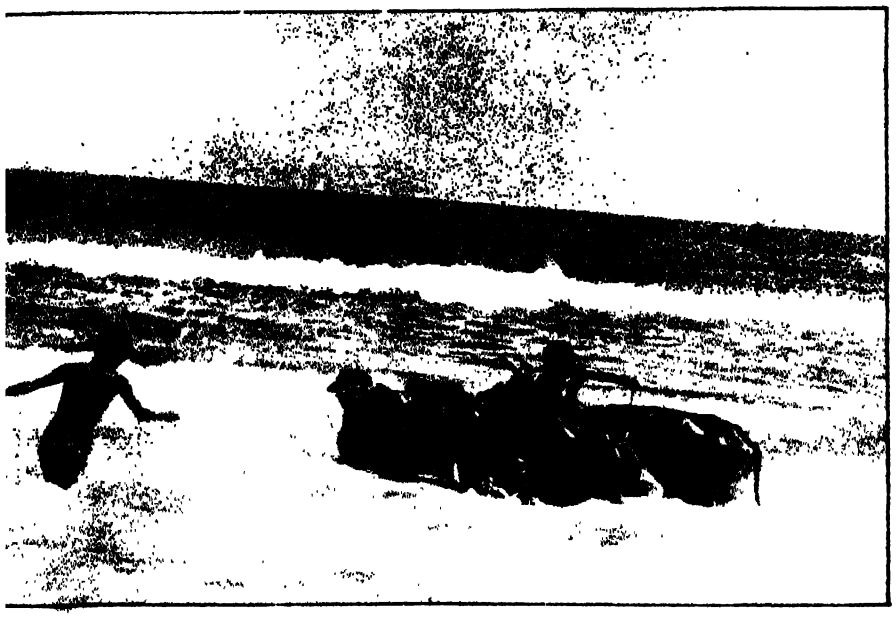
THE THIRD EYE

Summer is here!

MY interest in photography developed through the pictorial pages of magazines. I wanted to become a professional photographer, but there was no one to guide me. So I purchased a box camera and took a few photographs. The results were fair but my preliminary success encouraged me. I learnt how to handle a camera as well as develop and print pictures from a friend of mine who had a shop in Delhi.

I have no pet subject; in fact, I am averse to getting "typed". My photographs have been published in leading magazines here and abroad and I have won several prizes for my work. I am presently with the Central Reserve Police, a stimulating job which gives me an opportunity to cover floods, riots, rescue operations, training exercises and sports meets.

Photographs and Text by Satish Khanna



Did We Build Stonehenge?

It is probably necessary for a people who travel from continent to continent to build some kind of monument which proves they passed that way. Such monuments, more than 4,000 years old, still exist in Great Britain. S.S. Kaul says there is no doubt that Stonehenge and similar sites all over England, Scotland and Wales have a close parallel with India.

IT is impossible to explain fully the attachment of Indians to Britain. Why should a nation of 720 million exercise such a hold over a tiny island in the Atlantic Ocean? Perhaps the roots go deeper, much deeper.

Legend has it that early Indian seafarers discovered a continent which could only be America. The features, customs, clothing and weaving patterns, as also food and worship, of certain American-Indian races are strikingly similar to our own.

The theories about the movement of the Dravidians to Australia under pressure from the Aryans are no longer considered frivolous. The temples of Kampuchea, the worshippers of Bali and the fact that the ancient capital of Thailand was, and still is, called Ayodhya and that their kings to this day are still known as Rama are pointers that the ancient Indians established and maintained links with their far-flung outposts.

The accurate study of the movement of stars is vital for a seafaring nation. Indian astronomical studies were at their peak even thousands of years ago. It is therefore a distinct possibility that Indian seafarers may have landed in Britain and used it as a stop-over for their journeys into the Atlantic and brought their knowledge of astronomy, stone-cutting and ocean navigation to these Isles.

Striking Example

It is probably necessary for a people who travel from continent to continent to build some kind of monument which proves they passed that way. Such monuments, more than 4,000 years old, still exist in Great Britain. British authorities agree that such constructions were beyond the capacity of the pastoral society of that time as it necessitated cutting and moving huge stone slabs, the heaviest weighing 30 tons, over distances ranging from 30 to 200 kilometres. Built of stone and with great care and accuracy, these monuments were meant to last for thousands of years.

The best preserved and most striking example is Stonehenge, on the Salisbury Plain. Construction is believed to have begun around 2,500 BC. It consists of a circular bank and ditch nearly 400 feet in diameter with a ring of stones just inside the ditch. Over the centuries, hundreds of stones, some of them weighing up to 30 tons, were moved over vast distances and positioned with great accuracy.

There is no doubt that Stonehenge and similar sites all over England, Scotland and Wales are of astronomical and religious significance. This has a close parallel with India, where studies of religion and astronomy have been closely interlinked. More significant is the fact that the people who built Stonehenge cremated their dead and preserved the ashes. In India, even today, the ashes are carefully preserved for immersion. Perhaps the ashes were transported back to India for immersion in the Ganga in the great ships which plied the ocean routes. Other features which such monuments have in common with India are the concept of sun worship, the mother goddess and animal sacrifice.

STONEHENGE, on the Salisbury Plain. Construction is believed to have begun around 2,500 BC.

Maharajah's Donation

Closer to our times, in the 1860s to be precise, a well was constructed and donated by the Maharajah of Benares to the village of Stoke Row in Oxfordshire. The well, even at that time, was unique; it was 368 feet deep (taller than St Paul's Cathedral) and built by an Indian maharajah for the needs of a small British rural community for reasons which can be understood even today in India: there was no source of water in the village except for a tiny pond, and water had to be carried over long distances.

The well has its own history and legend. The people of Stoke Row are still proud of it, although it is of little use to them now. A trust has been created and funds are being raised for its proper upkeep.

There must be many, many more monuments to prove our association with the British, some known and some not so well known, but more relevant to our times and significant in modern terms is the noteworthy contribution of several individuals and groups of Indian origin to the growth of British industry, commerce, finance and technology.

But that is another story. ■

Down Memory Lane

with Manoj Das on his recent trip to Indonesia.

WAY back in 1956, Puncak Pass, 1,500 metres above sea level in the hills of Sindanglaya in West Java, was a cosy little resort only for seekers of solitude. There was a hotel with its log cabins scattered on grassy mounds of the high valley. On weekends, four or five families occupied those cabins, and the dining hall of the hotel always looked exclusive and private.

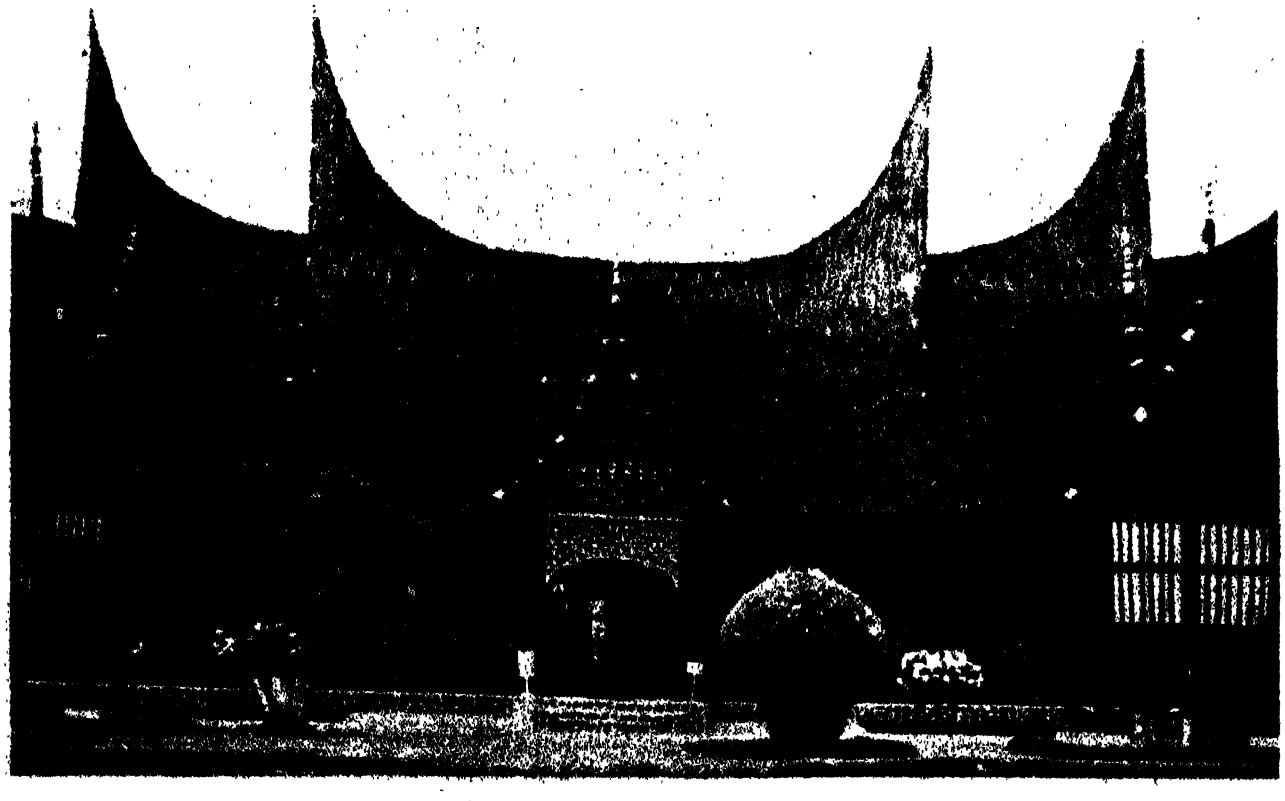
I spent my enchanted hours lolling in a cane chair outside the hotel under a colourful umbrella, enjoying the breathtaking beauty of the valley spreading downward, fog settling down on the wooded hills around.

One Saturday, I entered the forest and trekked the hills for hours. But I did not do it again. The same night a gang of religio-political terrorists attacked the hotel. After ransacking its main building it began invading the log houses. The first, second and third houses were occupied, but the fourth one was empty. I had switched off the lights in my house, the fifth and last. The terrorists concluded that those two houses in the row were empty. They left after deflating the tyres of the cars of the guests parked in front of the hotel. On their way back to their forest-abode, they sprayed bullets from their sten guns and killed seven men in a nearby tea estate.

I left Puncak soon after, but despite that night's terror, I continued to nurse a nostalgia for that desolate hill-resort.

BOROBUDUR. The recent renovation and rededication of this magnificent temple in Indonesia, with the help of UNESCO, is attracting tourists in large numbers.

HOUSE IN THE SUMATRA STYLE.



WITHIN minutes of my arrival at Jaka ta (a friend was waiting in his car the airport), I made a dash for my Puncа

What awaited me was an experienc similar to Tagore's Cabuliwallah, who lov a little girl and rushed to meet her aft spending a number of years in jail, only meet a stranger.

Where was my old Puncak wrapped primeval silence? The pass was flanked l rows of shops. The rush of traffic w terrifying. (The wooden-bodied cars of t Dutch days had been replaced by hordes elegant Japanese cars.)

At last, when I located my old hotel aft passing numerous new ones, I had to litera elbow my way into it. Thousands throng the area. Hang-gliders were descending fro a hill-top.

Amidst the radical changes, my log hou stood unchanged. I wanted to go closer to A smiling young man stopped me. I must p 500 rupiahs for entering the hotel's lodgi area. It was a Sunday, and that was the an way they could stop picnickers spoiling t lawns.

I paid and went in.

"DO not go to Bandung, for an extreme polluted air hangs over the city since volcanic eruption a few days ago," I h been warned by my friends. I wondered if t volcano could do worse to Bandung than t factories did to Bombay or Calcutta.

Bandung was a symbol for me. We, t student-representatives of Asia and Africa the fifties, had met there a year after t historic Bandung Conference of 1955. Ou was called "The Little Bandung". Tha were five days of Hindi-Chini Bhai Bhai a Panchsheel. In the coming together Nehru, Zhou-en-Lai and Sukarno, we saw t emergence of a new East. Native dictato were yet to claim Africa chunk by chu

Bandung, founded by the Dutch at t beginning of this century, was often d scribed as the "Paris of Java", a wist sobriquet that does justice to neither city, a local publication put it. "There is no Sei or Louvre or Notre Dame in Bandung. A Paris does not have mountains, a tropi climate or a restless volcano at her ba door."

I drove straight to my hotel of 1956. It h become multi-storeyed. No room, of cour

Its growth was in keeping with the grow of the city but, even then, if Bandung look smaller and lifeless to me now, it was keeping with my own disenchantment.

Red Sun

Back in Jakarta (oh, the nightmarish traf in this most over-crowded of cities!) I reme bered the night in 1956 when, along with t other friends, I had met D.N. Aidit, then t Secretary of the Indonesian Communist P ty. He was charming and witty. And he w young, had to be, for all his senior comrad had been killed in what was known as t Madiun Affair. Over black tea and grou nuts we discussed all the issues under the r sun!

"When do you expect to come to power we asked him.

"In ten years," he said with startling eas "What will Sukarno's position be?"

"We won't mind him as the President. he can be a Minister if he so pleases!" Ai replied with a twinkle.

But Aidit did not wait for a full ten yea His party made a lightning bid for power 1965. But it was neither through the id Marxist method of organising the proletar and spearheading an upsurge of the mass nor through elections. It was by winning o Sukarno on one hand and influencing t army on the other.

Soon Aidit was in Sukarno's cabinet, a minister without a portfolio.

All the eight top generals of the army were either anti-communist or politically neutral. The second-rankers led the ill-planned coup that was put into execution simultaneously all over the country.

One fateful night, six of the generals were captured by surprise and butchered. Sheer luck saved the other two. Minutes before the ominous bang on his door, General Suharto had left for a hospital with his daughter who had taken ill suddenly.

General Nasution was at home when the rebels struck, but his faithful deputy offered strong resistance, giving Nasution time to scale the rear wall and escape.

The deputy died fighting. Nasution rushed to the camp of his own regiment and at once organised a counter-attack.

Soon the rank and file of the different regiments, most of whom had no sympathy for any political party, learnt what had been done to their generals. They came out on the open streets with grim faces and rifles held tightly in their grip.

Suharto and Nasution were soon in control of the situation. Practically the first thing they did was to cage "Bung Karno" in his own palace and gag the orator. Then the national television and press began showing the mutilated corpses of the generals and their family members. (One general's little daughter had been killed in her mother's arms.) Stories of the gruesome torture the generals had undergone at the hands of their tormentors precipitated a civil crisis. Began a countrywide massacre of communists and their sympathisers. Many found a chance to wreak vengeance on their enemies. "All one had to do was pass on the name of your adversary in business or love to the nearest armyman," a Javanese youth told me.

"Did you witness any of the massacres?" I asked him.

"Not one, but several. The people set fire to a house. The inmates rushed out screaming. They were instantly silenced by soldiers waiting outside, ready with their automatic guns."

"How tragic!"

"Very tragic. But this was a retaliation for the unprovoked violence by the communists," the youth answered without any regret.

"I am speaking of the innocents killed, those who had nothing to do with the coup."

"The little daughter of the general was also innocent. The whole episode was tragic.

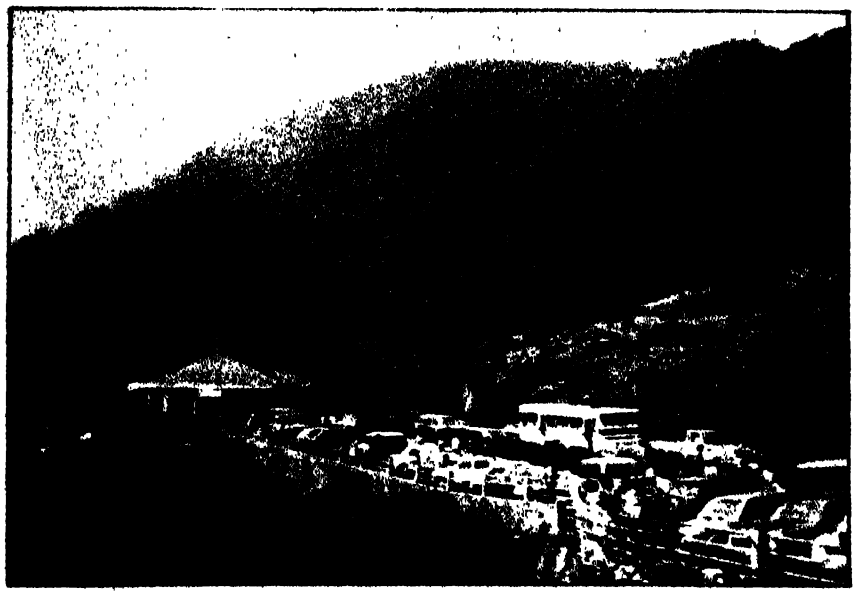
According to a conservative estimate three million people were killed.

Why did Aidit take a hasty step? One explanation is he was a Stalinist. The de-Stalinisation process (he was present at the 20th Soviet Party Congress where it began) frustrated him and he leaned towards the Chinese. It was China that was anxious to demonstrate a miracle.

Nothing was immediately known about Aidit's fate. It was only in October 1980 that a Colonel, Yasir Hajsubrato, stated openly for the first time that he had been executed somewhere in Java.

GATEWAY TO THE BESAKIH TEMPLE IN BALI.

PUNCAK PASS.



BUT Indonesia, the world's largest archipelago consisting of 7,900 islands, not only remains a beautiful country, but is also attracting large numbers of tourists with the renovation of the magnificent Borobudur temple and access to some of the little-explored islands.

Not far from Jogjakarta, amidst a large expanse of lush corn fields and coconut groves, overlooking volcano-studded horizons, stands Borobudur, originally *Vihara Buddha*, or derived from *Bhumisambhar-abhudara* (the accumulation of virtue on the ten stages of Bodhisattva) as a Sanskrit inscription found nearby indicates.

This lily-shaped monument, built in the eighth century AD, was the highest cultural achievement of the Sailendra Dynasty. In its original form, it was a gigantic stupa with a dazzling jewel on its crown, a three-tiered parasol with golden discs, circular terraces with 33 *dagabs* and, below them, 1,500 coloured panels telling tales from Buddha's life and 500 guilded images of Buddha.

After dominating the religious life of Java for about two centuries, Borobudur faded into total oblivion as Central Java lost its political importance and repeated volcanic eruptions damaged the monument.

Much of it remained buried under earth and shrubs. Private builders regularly plundered it for stones. Local rulers made gifts of the idols to their friends abroad.

Rediscovery of the monument in the 18th century, primarily by Sir Stamford Raffles, was followed by haphazard repairs from time to time. It was only 12 years ago that UNESCO decided to renovate it thoroughly.

The work is almost complete.

Borobudur did not look any different to me, but its environment did. There has been a mushrooming of shops outside the compound, and one has to pay a fee to enter it.

The colossal Shiva temple, Prambanan (Parambrahman), also near Jogjakarta, is under renovation too. Along with the majestic image of Shiva are some of Brahma and Vishnu, and a charming panel of delicate sculptures portraying the story of the *Ramayana*. According to an Indian art critic, G. Venkatachalam, they surpass the *Ramayana* friezes of the Hoysala temples of Belur, Halebid and Somnathpur and the Vittalaswamy temple of Hampi in rigour, artistic quality and technical perfection. Under the pedestal of the image of Shiva lies the tomb of King Raikai Balitung, one of the builders of the temple.

DENPASAR, the capital of Bali, has become restless, like all other cities, but the interior of the island remains fabulously innocent and as fascinating as ever.

The most ancient Balinese village that retains its pristine lifestyle is Tenganan. Till 1972, it was not even possible to ascertain its population. However, now they allow their births and deaths to be recorded and don't turn out visitors. There are nearly 300 families. No couple has more than two children, I was informed. Any one who marries from outside the village is obliged to build his house on the other side of the village wall. Their deity is Indra.

The villagers, since time immemorial, have owned a large area of land tilled by outsiders. The land was given to them by the King of Bedaulu under queer circumstances. The king lost his favourite horse and announced a reward for anyone who could bring it to him—dead or alive.

The chief of the village located the dead horse. When the king offered him a reward, he asked to be given land as far as the air was pervaded by the smell of the dead horse.

The king's minister accompanied the chief to determine the area. No matter how far they walked, the smell persisted. Tired, he let the chief have the land as far as he could see and went back to the king.

The chief then quietly removed a bit of rotten horse flesh from his walking stick!

Of the 2.75 million Balinese, 90 per cent are Hindus. Their most famous temple is the Besakih temple (probably from the godly snake, Vasuki) on the Agung mountain.

That was my destination.

The temple, dedicated to the Hindu Trinity, is lofty and awe-inspiring. The spirit of the Agung, a living volcano, watches over the temple.

Of the many ceremonies held in the temple, the most remarkable is *Eka Dasa Rudra*, held once in a hundred years.

It was on March 8, 1963, that the last ceremony was scheduled. Suddenly the mountain shook and the volcano burst, sending lava and boulders to a height of 50,000 feet. Thousands died and the falling lava turned large cultivable areas into wasteland.

Perhaps the date of the ceremony meant to appease the spirit of the mountain had been miscalculated. Perhaps the right time had expired and the spirit had grown impatient.

Surprisingly, the temple stood unshaken. ■

The Police And The Media

Swinder S. Sahni, examining the question of a more meaningful relationship between the two, says the media can be a 'nurturing parent' for the force.

OVER the past few years, an increasing measure of thought and effort has been devoted to the study and the implementation of systems and practices to bring the Police and the Media closer. On the national level, a dialogue has been initiated as between the Police, the Journalists and other Media Men and Academicians with the intention of deciding, in practical terms, the methodologies by which a meaningful rapport can be achieved.

Just a decade or so ago, the police had no realisation of the positive power and gains of a good relationship with the media. The press, particularly, was considered to be an unmitigated nuisance, often resorting to wilful distortion, falsehood, character assassination, sensationalism and crass commercialism at the expense of the morale, the self-confidence, the self-respect and public respect for the law-enforcement agencies in general and the police in particular. This often led to a confrontation in the areas of interaction between the media and the police. It stemmed from—among other things—the inflexibility of the mutual attitudes of the two.

Need For Attitudinal Change

An attitudinal change is required for a smoother relationship between the police and the media in the interests of improving the police image, ensuring better policing and putting the police-public relations on a healthier footing. To achieve these objectives, there must be mutual understanding of the compulsions of *both* parties involved.

Experience has confirmed that, once a proper relationship and regular channels of communication are established, there is lesser tendency on the part of reporters and correspondents to indulge in fabrication or distortion of news or in destructive criticism. This also applies to interpretative or investigative reporting in which the police are often portrayed as odious, merely because of the compulsions of secrecy or discretion on their part and/or lack of free-flowing communication channels.

The attempts at establishing channels of communication have been inadequate, sporadic, chancy and often whimsical—dependent on the personal prejudices and predilections of the officers concerned and the existence or otherwise of geniality and fairness on the part of the media men.

However, one of the fundamental issues which arises is whether the media in general and the press in particular have an "adversary" role to play in respect of the established authority which, of course, includes the police. A sanction is sought to be discovered in Mahatma Gandhi's proclaimed view that "one of the objectives of the press is to understand the popular feelings and give expression to them". This view is perfectly valid, but it does not necessarily imply, much less sanctify, an "adversary" role—which seems to be an idea borrowed from democracies at a much higher stage of advancement.

In these transitional times, what is required is, in terms of Transactional Analysis, that the media should act as a "nurturing parent". Through painstaking job analysis, difficulties of the police—with particular reference to the socio-politico-economic milieu in which they have to function and the in-built distrust of the police in the major laws—the media should come out with constructive suggestions and viewpoints. Negative, hypercritical and prejudiced media can be highly counter-productive and destructive.

Even in a country like the UK (where even the legendary bobby is no longer on as high a pedestal as he used to be), there is felt to be a true need to protect the police from unfair criticism. Thus Lord Shawcross, Chairman of the Press Council, said: "Newspapers generally take care to prevent the publication of anything untrue—when they act in good faith and with a true sense of public responsibility, they should be protected if occasionally they go wrong." In the course of a national-level seminar (at which I had the privilege of representing the Maharashtra Police), the participants were able to suggest some parameters of a meaningful relationship between the police and the media.

Clearly, the first requirement for this is establishment of a well-defined, well-structured and well-staffed organisational network for the entire Police Organisation in a State (or other Police Organisations)—so as to have from the top level down to the unit/sub-unit level a constant contact between the media and the police.

From experience, however, it is seen that, for this purpose, it is not enough to designate police officials at various levels—policemen who are already burdened with whole-time or otherwise substantial duties—additionally to look after the police-media relationship. In Maharashtra, after experimenting with the part-time PR approach over a number of years, a decision has recently been made that *full-time* officials are required to be posted for the PR jobs. A beginning has been made by sanctioning posts of 48 Police Inspectors for the Police Stations of Greater Bombay for performing PR functions.

COMPUTER SECTION OF MAHARASHTRA POLICE For all the sophistication imported into the functioning of the force, the attempts at establishing channels of communication with the media have been inadequate, sporadic, chancy and often whimsical.

There is a consensus, however, that the policy of posting to such jobs police officials (who just happen to be the least burdened by other tasks or those not considered fit for executive duties) may do more harm than good. It must be remembered that Public Relations is a specialised discipline in its own right and any amateurish attempts at it can produce only results of indifferent if not harmful quality. Three alternatives are, therefore, available:

(*i*) To offer entry into the police force at various levels (Constabulary/Sub-Inspectors/State Police Service/IPS) of persons who have had sufficient academic and/or practical training in Journalism or Public Relations, so that a cadre of such personnel can be built up in the department.

(*ii*) Suitable police officers may be financially helped and otherwise encouraged to undergo courses in Journalism/Public Relations with the commitment that, for a prescribed minimum number of years, they would continue to serve the department and be posted in Public Relations jobs.

(*iii*) Working Journalists/Public Relations men could be employed and posted at suitable levels on a contracted or permanent basis, as may be found feasible.

Perhaps a mixture of these three methods will be ideal in order widely to spread a healthy attitude regarding this relationship—at the same time providing a dependable and adequate pool of talent to fill up the posts which may be created from time to time. But the media, too, have been conspicuously lacking in expertise and professionalism in relation to Police Administration; Police Problems; Crime; Law and Order; and Criminology. Much homework is done (not to speak of academic credentials acquired) before the media men write on economic, defence, political or diplomatic affairs. No one—indeed no one—in India comes to mind as possessing parallel credentials for writing on the Police and Crime. The exceptions are, of course, a few ex-police officers of erudition and eminence. But, for the very reason that they were police officers, they are deemed to be "interested parties" and seem to carry less weight! There is an obvious need for specialisation on the part of the media men.

The press often feels that there is too much of secrecy in the matter of providing information. It understands that, at the time of certain occurrences (such as communal riots), there is need to conceal or hold back certain things for some time; but they feel they should be taken into confidence and depended upon not to publish certain things in the public interest. Not being trusted often compels them to seek other sources of information which may lead to the publication of exaggerated, even incorrect information.

Generally speaking, therefore, it will do no harm—if anything, it will do much good—to society to recognise the causes of friction between the police and the media; for the police to provide a well-structured and suitably staffed machinery for the continuous, prompt and copious supply of information to the media (keeping back the minimum possible); for the media also to do their homework and to develop expertise; for both of them to develop an attitude of cooperation (rather than an adversary role) for the common good.

Health

The Malnourished Millions

by Dr Y.P. Gupta

THERE is a growing awareness of the problem of general malnutrition in the developing countries including India Closely nked with the availability of food poverty is naturally the major contributing factor In ndia for example, millions of people live elow the poverty line, and subsist on an l-balanced and inadequate diet due to their ow purchasing capacity

Except USA, Canada and Western Euroean countries, more than half of the world's opulation is caught in a relentless cycle of gnorance, poverty malnutrition disease and arly death

Estimates show that 100 million children uffer from the ill-effects of malnutrition in he developing countries The number is 37 nillion in India alone The death rate among hese children is 50 per cent, while the ncidence of diseases arising from nutritional leficiencies among school children is as high is 22 per cent The infant mortality rate in ndia is the highest It is 127 per 1000 in ndia, 15 per 1000 in Sweden, 18 per 1000 in J K and 22 per 1000 in U S A In U P, it is is high as 168 per 1000 and in Kerala, it is 68 er 1000 This high rate in India is attributed o the widespread prevalence of malnutrition among women in the reproductive age group

Apart from general malnutrition due to ood inadequacy, protein-calorie malnutri ion, anaemia—especially in mothers and young children, vitamin A deficiency (leading o blindness) and riboflavin deficiency are other major types of malnutrition Rickets, scurvy, pellagra and beriberi occur in severe forms in some parts of the world but they are less prevalent than the others

Goitre caused by iodine deficiency is also a major nutritional problem in India According to a recent report of the Director General of Health Services, about 10 million people are afflicted by goitre—enlargement of the thyroid gland Fortification of common salt with iodine was recommended by WHO (World Health Organisation) as the cheapest and best method to prevent goitre In a national goitre control programme, a comprehensive survey on the disease has been undertaken to take preventive measures for its cure (with iodised salt) in the affected areas Some improvement in certain areas has thus been recorded

Anaemia

It has been shown that about 30 per cent pregnant women among the poorer sections suffer from anaemia In a bid to reduce this a national programme to prevent anaemia among the newly-born children has been launched in which expecting mothers are advised to take a combination of iron and folic acid tablets during the last 100 days of pregnancy as well as include green leafy vegetables and legumes in their daily diet

Vitamin A Deficiency

The number of persons who have turned blind due to vitamin A deficiency is estimated to be over one million Reports show that over 7 million children suffer from vitamin A deficiency every year, of which 42,000 become totally blind and another 78,000 suffer from poor vision Ignorance about this deficiency is felt to be the major contributing factor UNICEF, WHO and FAO agencies have been extremely active in educating the rural and urban poor against this blinding scourge Administration of massive doses of vitamin A to young children once in six months yielded promising results in Kerala and Karnataka The use of green leafy vegetables and fruits like mango and papaya in the daily diet has also been suggested as a remedy against possible vitamin A deficiency

Protein-calorie malnutrition has become one of the most outstanding dietary problems in India and in other developing countries It has been proved that a shortage in calorie (food intake) results in protein shortage Thus, a large section of our people suffer from protein malnutrition due to insufficient intake of calories (food) and non-availability of protein-rich foods of nutritional quality, especially needed for growing children

The severest effects of protein-calorie malnutrition, namely, "kwashiorkor" and "marasmus" are manifested in vulnerable groups such as infant and young children, pregnant and nursing women The development of young children in particular is adversely affected. They suffer from retarded mental and physical growth, in addition to being easily susceptible to infections due to low resistance Protein-calorie malnutrition has, thus, a serious implication on the health of the nation

ICMR Survey

The data on diet surveys conducted by Indian Council of Medical Research (ICMR) has revealed that about 31 per cent of the households here are calorie deficient, 22 per cent are protein-deficient in the sense that their protein intake falls short of their protein needs and 19 per cent are both calorie and protein-deficient Dr C Gopalan, Director General, Nutrition Foundation of India has also conclusively shown that the principal deficiency among children is one of calorie (food intake) and deficiencies of other nutrients including protein are the outcome of inadequate consumption of food

According to a study made by the International Food Policy Research Institute (Washington, USA) the average daily intake per capita in advanced countries like USA and Western European countries is about 3,000 calories

The average Indian diet on the other hand is grossly inadequate Food adequacy is thus the most important tool for combating protein-calorie malnutrition Low-cost protein foods containing groundnuts, pulses and cereals have been developed for school children, for this purpose

The balanced diet worked out earlier by the Nutrition Advisory Committee in India for the maintenance of good health was quite costly, the poorer sections of society naturally paid no heed to it, and consequently suffered from malnutrition Keeping in view the current price situation, the balanced diet schedule has been revised by ICMR in 1981 It now represents the bare minimum However though the 1981 ICMR diet is relatively less costly, it may still be difficult for the poor to afford it

Though the growing problem of malnutrition has been receiving greater attention these days there is a need for a multidimensional approach to combat malnutrition successfully, a National Nutrition Policy, of which self sufficiency in food production, eradication of poverty and removal of socio-economic disparities have to be given priority ■

THE VITAL DIFFERENCE Malnutrition in India and other developing countries is usually a result of a grossly inadequate and imbalanced diet

—GIRIJA PRABHAKAR

Cures That Endure

Malnutrition—The Malady

IRONIC isn't it, that while some of the world should be throwing their extra crop of apples, (not having the faintest idea of malnutrition) others never see any fruit for the better part of their lives Somewhere along the line a certain imbalance undoubtedly exists However skipping philosophy and morals, to stay healthy, the body must have fats and carbohydrates to constantly supply energy, proteins, minerals and vitamins to repair and maintain body tissues.

THE RIGHT KIND OF FOOD

For us carbohydrates supply as much as 90 95 per cent calories of the total calorie intake, generally, and this is a fair indication of our atrociously poor standard of nutrition, whereas fats the most concentrated source of energy, provide as much as 9 calories per gram, carbohydrates give only 4 calories per gram

A man between the ages of 18 and 35, who is occupied mainly with desk work needs 2,700 calories, while a person engaged in manual labour needs many more Of course the labourer with his fixed quota of grain can hardly hope to meet his calorie requirements Equally unfortunate is the emaciated pregnant rural belle about to deliver her fourth child, who needs extra calories but who can only dream of drinking milk and orange juice and is perhaps blissfully unaware of the magical vitamin pill

In the course of its life-span, the human body, like any other organism, loses some of its essential elements Protein is lost from the body by shedding cells from the bladder, skin and the gastro-intestinal tract For growing children the need for protein is particularly acute as it is constantly required to build and rebuild cells which are the units that compose the final structure

Nutrition at the earlier stages determines whether or not the adult will be vulnerable to the buffets that life is sure to bring in its course To avoid malnutrition in children, which may lead to severe and irredeemable blindness and other organic disorders, be sure to give your child enough unrefined foods—whole grain cereals, plenty of leafy vegetables and a high protein diet instead of refined sugar products and canned fast food Remember the only way to beat malnutrition is to eat—the right kind of food ■

Julie Bijalpita Chatterjee

The Bomb And I

The death-wish obsesses us all.
However, getting down to business
is a different thing altogether.
To hang from the ceiling
requires
a slow, deliberate courage.
You have to imagine how you would look
to those who discover you that way.
Sleeping pills may still keep you alive
and with a bad reputation of
not doing a job well.
To pull a trigger
you need a licence. Everything
needs a decision.

So I
tell the bogey that stares up
at me from the newspaper: You are
the answer to a ditherer's prayer—swift,
sure, ultimate You give
the assurance that there will be no
discoverers, tears, wagging tongues,
and provide—
from all procastination, fear, self-indulgence—

deliverance.

Pushpinder Syal (Chandigarh)

Urban Credo

On the sixteenth floor of my K.G Road office,
the air is rarefied, bereft of the scarcities
that peep out of the environs I call home.
The altitude, the lift, the carpeted
air-conditioned splendour
are enough to scrub off my concepts...
I work up my mathematics on the credit side.
The irreverence has turned into irrelevance
For my kin, they have shunned me like a summer fly.
I forget the ironies of home
in the flick of my cigarette.
My suit with a matching tie is my armour
to shut off the creeping lizard sticking to my skin
The philosophy of poverty does not rhyme well
in my talks with company clients.
It's a strange chiaroscuro
in which I conceal the dark lining of a personal history.

Kailash Kohli (Delhi)

Married Bliss

A long time ago, but not so long either,
she used to stealthily glance down when she gave a gentle
tug
to her sweater
She used to talk less,
gaze afar, take long
to gulp the mouthful of water
after meals.

And after one such meal
one day,
after a mundane day
when fog was thick above the kitchen heat,
she swallowed a notion:
Marriages are made to succeed.

So, she devised a man.
A man
who would gently smile in his moustache,
and the two lines
etched one along each
deep shrunken eye,
would hold the promises to glide—
arms locked, lips locked—
above sand dunes
on cold merciless nights...

God knows whose *alma mater* he belonged to.

Still, the wild horse dances in the drizzle;
also,
naughty dreams avalanche in a mother's eye.

Sanjiv Bhatia (Bombay)

The Match

My parents' debt to me was paid.
I was engaged to a rich lad,
a sighing lump. I saw the engagement
pointing to a deadlock: nightmarish
stalemate in the coffin of a bedroom.

Even that lanky, bearded eccentric
producing endless ringlets of smoke... well...

But how could the moron nourish
my delicate dream life?

Resigned, I steeled myself to meet something
like Orwell's rat Winston in 101.

But it wasn't that bad, after all.
Pocketing insults diligently, he sought
to soften me. Days passed.
I pitied him. Consoled myself.

The long, barren night has ended,
with my sympathy extended.
Eagerly he awaits the dawn:
"A glowing sun may soon be born!"

Pity preaches the beauty of the low.
The mind, like Russell, dreams of peace.
But who can quell the unruly waves
whose volcanic rage launches a guerilla raid
to make the ill-founded superstructure
collapse like a torpedoed ship?

The tireless spider weaves its web again.
Yet, can it stand
the blast of wind and wave?
Can broken pieces of glass adorn
an empty frame?

V. Hariharan (Nagercoil)

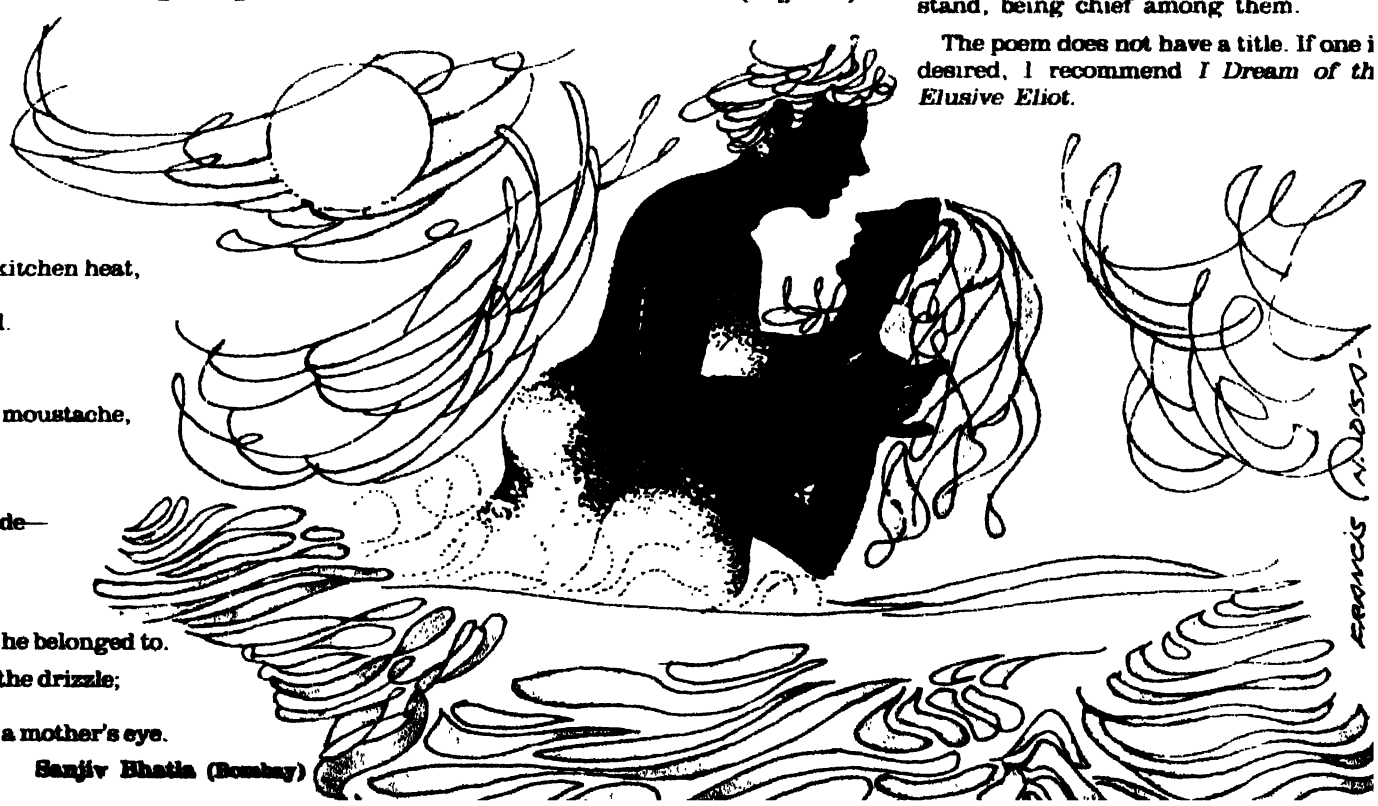
Oh dear eliot is such a crashing
bore i wish he always did not float
parallel to the ceiling me poor indian
brain would liyk to know what he meant
by this by that of course i know
he meant more than these brownie
inglishers of champas and godhulis
and native swollen chests wherefore
wherefor my angst is explained
they of the abhi man yous and
lilavatties may scream i dream
of the illusive illiot he shall light
all within me for I dearly wish
to be cummings onto the scene
of the poetry magazine without the
obligatory chand sitare and
bulley ballye

Dinyar Godrej (Indore)

Notes:
(Being an attempt to show depth in
basically light poem)

The poem is "spoken" by an India
would-be poet who really quite dislike
Indian poetry in English A few of th
shortcomings of Indian poets writing i
English are brought to light. The "speak
er", however, unwittingly brings to ligh
his own weaknesses– the use of relative
ly big words incorrectly (as in "angst"
line 9), the miserable attempt at imita
ing Cummings (acknowledged quietly i
line 14), the craving to understand th
foreign idiom with the total rejection c
the Indian idiom clearly easier to under
stand, being chief among them.

The poem does not have a title. If one i
desired, I recommend *I Dream of th
Elusive Eliot.*



Exposé

Almost every day, the investigation of the various scandals shaking Italy bring to light new evidence of the close link-up between the country's political and financial world and the Mafia. The latest names mentioned in connection with shady deals are those of film director Carlo Ponti and his actress-wife, Sophia Loren.

Sophia Loren-Carlo Ponti

The Mafia Connection

ROME—Offering legal cover-up to well-heeled defendants is an ancient habit which seems to have flourished among the people revolving around Roberto Calvi, the late head of the Banco Ambrosiano and P2, the secret Freemason society accused of subversive activities.

On January 6, the Deputy Public Prosecutor at Perugia, Domenico Tentori Montalto, submitted a request demanding a new legal proceeding against Rome attorney Vilfredo Vitalone, facing charges of having pocketed hundreds of millions of lire under false pretenses to help battle legal problems for Calvi, whose Ambrosiano Bank collapse had unleashed Italy's worst post-war political and financial scandal. Calvi was found dead, hanging from a London bridge two years ago.

Italian judges will soon be facing a case similar to the one involving Attorney Vitalone, a case whose mechanism and background are very similar. It is a case going back a few years, and its principal figures are none other than, on one side, film director Carlo Ponti and his wife Sophia Loren, and on the other side, Domenico Balducci, the mafia boss slain two years ago.

In the background looms the omnipresent figure of Flavio Carboni, the Sardinian entrepreneur now in jail for his participation in the crash of Banco Ambrosiano and Calvi's death.

The story, as brought to light by investigating magistrate Ferdinando Imposimato, is roughly as follows: While probing Carboni's shady deals and Balducci's homicide, the judge was told by quite a few witnesses that Balducci, the 51-year-old right-hand man of Sicilian mafia boss Luigi Faldetta, had often boasted of having close connections with the Rome Palace of Justice.

In his note book, Balducci had the telephone number of Deputy Public Prosecutor Santoloci. Balducci had told some people that he knew the Deputy General Prosecutor, Caldora, whose name has also been mentioned by Carboni in recordings of telephone conversations he had with Calvi.

Balducci had made boastful claims with his intimate friends that he had free access to the offices of some of the top people in Rome's judicial circles. Was this mere beer talk?

The fact is that someone had believed Balducci's assertions. This someone, according to investigating magistrate Imposimato, is film producer Carlo Ponti. Ponti and his wife, Sophia Loren, have been involved in the transfer of illegal money abroad and charged with fraud for passing off films shot abroad as films made in Italy.

According to the writ, the slain mafioso, Balducci, is alleged to have intervened on their behalf. Three hundred million lire were allegedly paid to smooth out all problems. On this score, witnesses questioned by Judge Imposito have been unable to supply details. Someone has mentioned a cheque with Carlo Ponti's signature. Sophia Loren, who will be questioned as a witness, will possibly provide an explanation. If the claims are not borne out, the only explanation will be that Balducci had been guilty of false pretenses. This is the same charge levelled against Defence Attorney Vilfredo Vitalone.

Is this mere coincidence? Naturally, but a strange one. Balducci's story is full of coincidences. To mention only the main one: this fabulously wealthy figure of the Sicilian-Roman underworld, who owned a 700 million lire villa in Rome's Aventino district and a fortune of several billion lire resulting from the laundering of dirty money, was a close associate of Flavio Carboni, to whom he had lent money.

THE LADY L. Sophia Loren recently admitted that her incarceration in a Naples prison for tax evasion has led to heart trouble.

The fact is that someone believed Balducci's assertions. This someone, according to investigating magistrate Imposimato, is film producer Carlo Ponti. Ponti and his wife Sophia Loren have been involved in the transfer of illegal money abroad and charged with fraud for passing off films shot abroad as films made in Italy.

Balducci was also an associate of Danilo Abruciati, a killer slain in Milan by a patrolman while trying to murder Roberto Rosone, the former Vice President of Banco Ambrosiano and a close friend of Ernesto Diotallevi. Rosone, who was also implicated in the scandal, was seen at the side of Calvi and Carboni in the final, dramatic hours before Calvi's death. All this results in a strange merry-go-round of shadowy middlemen and gangsters, murders and suspicious suicides.

A strange new twist to the case of the collapse of the Banco Ambrosiano, the mysterious death of Calvi in London and the P2 Masonic network has just been provided by a testimony made by Emilio Pellicani, a former close aide of entrepreneur Flavio Carboni. Pellicani bluntly told members of the special commission probing the P2 scandal that he fears for his life. Vitalone, Carboni, the Mafia and the underground, he alleged, might try to kill him to make him pay for his revelations.

To assure his protection, the authorities have been holding Pellicani in special jails set up inside police or custom services barracks. Pellicani, who had summed up his testimony in a special report, flatly accused one more Italian public figure of involvement in the scandal: he charged that former Under Secretary in the treasury, Guiseppe Pisanu, had offered to help Calvi overcome his difficulties.

Pellicani asserted that the Treasury Under Secretary had intervened with the Bank of Italia to win permission for Calvi to increase the capital of his trouble-ridden bank.

According to Pellicani's testimony, defense lawyer Vitalone had demanded 25 billion lire for helping Calvi. To collect that money, Calvi sought financial help from various public figures he knew well, but they turned him down.

How was he to meet Vitalone's demand? Within the next 24 hours, Carboni's Companh Prato Verde, of which Pellicani was the administrator, received six billion lire from Banco Ambrosiano. With the help of various middlemen, Vitalone received additional funds, including two payments of 600 million lire each, forwarded to the lawyer thanks to the good services of a car dealer, Fausto Annibaldi, an associate of the Prato Verde Company.

Other funds were supplied via associates in Switzerland. A payment of 750 million lire was forwarded to Vitalone through another middleman, Ernesto Diotallevi, a member of the underground. Soon afterwards, Calvi was found hanged in London, and Pellicani was arrested for the first time. Vitalone despatched cables to all Italian jails proposing to defend Pellicani—but the latter chose his own lawyers.

Just as Pellicani began giving his testimony before judges at Trieste, a note arrived from the Rome Prosecutor's office demanding that Pellicani himself face charges of having, in fact, pocketed the funds destined for Vitalone. But the investigating magistrates warned the prosecutor that unless firm evidence of such a misdemeanor was supplied, the accusation did not hold water.

Pellicani, in his testimony, also supplied details about Calvi's departure from Italy. He had accompanied Calvi on the plane to Trieste which, coincidentally, also carried Mrs Tina Anselmi, the President of the special commission investigating the scandal.

Noticing her presence on the plane, Calvi, according to Pellicani, remarked, "She is my friend."

Pellicani, answering a question by a member of the commission, said he did not know whether Calvi was joking or whether he meant the remark.

Calvi, Pellicani insisted, was at that time not fleeing Italy. He was merely going abroad to try to gather documents which would force Vatican financial expert Marcinkus to meet his obligations to his bank.

But in Trieste, while watching the news on television, Calvi heard the report about his disappearance from the capital. At Diotallevi's suggestion, he decided to escape from Italy under the false name of Calvini... ■

The Mohinder Factor

—PATRICK EAGAR

PAKISTAN 78—Mohinder Amarnath in helmetless action during a tour on which he first lost his bearings against pace. Now, fortified by the helmet, Mohinder is back at his best. Is he wielding above the same willow he does today? Commentators have remarked on the fact that Mohinder's 'lucky' 1982-83 bat is heavily strapped.

IF it was the Gavaskar Factor that thus far determined the opposition's 'equation' with our cricket, it is now the Mohinder Factor. Not in the 50-year Test history of Indian Cricket has there perhaps been such a comeback. That, too, against the one type of bowling that has traditionally represented our failing. To hear one commentator after another describe Mohinder Amarnath as "a very good player of fast bowling"—in fact, as our best man against the quick stuff—is to wonder all over again as to where exactly we went wrong in our assessment of this never-say-die performer whom Sunil Gavaskar himself described as "our finest prospect" at the end of that bloody 'no-Holdings-barred' contest against Lloyd's West Indies, early in 1976. If the helmet made all the difference to Geoff Boycott's approach to fast bowling, the same magical metamorphosis is being witnessed in the case of Mohinder Amarnath.

During the recent Karnataka-Bombay Ranji Trophy Final, just as he was leading his team out to field, I asked Brijesh Patel whether he would like another go at Test Cricket, seeing how well Mohinder had done and keeping in mind the widely held view that Patel, too, is a different batsman altogether given the fortification of a helmet. Brijesh just spread his hands, as much as to say it was now all too late. The fact that Brijesh has not been in too robust health of late may rule out the possibility of a Test comeback, but the fact remains that, after G.R. Viswanath, no one has displayed Patel's 'class'. Why, seeing the way Gavaskar threatens to follow in Viswanath's retreating footsteps, it may be time for Sunil, too, to consider wearing a helmet... After all, is it not merely the possible hurt to the 'seat of his ego' that's made Sunil shy away from sporting that headgear so far? *No, it's not him. It's someone else! This can't be the Sunil Gavaskar we saw here in the West Indies in 1971 and 1976...*

The above comment of Tony Cozier over the air on the capers Sunil cut at Port of Spain sounded like a swan-song being composed for the very man in whose praise the Caribbeans had created calypsos galore. Yet, even while regretting Sunil's fall from the heights, Tony Cozier was careful to leave himself with a line of retreat in nothing that "the danger now is that Sunil will suddenly get back his concentration and then..."

Yes, Sunil may yet prove his detractors wrong, especially as the next Test (starting March 31) is in Guyana, where batting conditions are as ideal as at Port of Spain. Only, how many of you considered that Sunil at Port of Spain may have been barred in his bid to resurmon his concentration by the fact that every word uttered by Tony Cozier, and Dicky Rutnagur, and Gerry Gomez, could be heard by him out there in the middle? Transistors in the West Indies blare away at the same deafening volume as they do in India and it could certainly not have been *inspiring* for Sunil to hear every single commentator bemoan the fact that he had lost batting caste.

Mohinder Amarnath, too, must have heard what they said. But, then, they had only praise for him. The point has been made that, now that he stands square to the wicket, Mohinder is even more susceptible than before to body-blows from Marshall, Holding & Co. But it is *this* change of stance, coupled with that helmet, that has wrought the transformation in Mohinder's case.

In the circumstances, one can only admire Mohinder's capacity to carry on with even greater resolve every time he is hit. On one occasion, for instance, the ball went for four off his helmet: yet the very next ball he fearlessly hooked! No concussion there! Only concentration. And a new-found ability to come *inside* the line of flight before playing the shot—the shot that so often proved his undoing when he was sans any headgear!

Can it be then that Gavaskar (like Viswanath), after playing virtually non-stop, has gone too stale mentally to take on the challenge of peak pace, while Mohinder is refreshed by the very fact that he was banished for three years from the Test scene? Who banished Mohinder? Certainly not Polly Umrigar, who was then Chairman of Selectors. The popular impression, that it was Polly Umrigar who showed poor judgment in writing *finis* to Mohinder's career, is totally erroneous. In fact, Polly persisted with him to the last. Why, for the Sixth Test against Hughes' Australia at the Wankhede Stadium in Bombay, every second selector bar Polly Umrigar was against Mohinder Amarnath's inclusion in the India eleven. Whereupon Polly used his casting vote as Selection Committee Chairman to get Mohinder just one more chance.

Every word uttered by Tony Cozier, and Dicky Rutnagur, and Gerry Gomez could be heard by Sunil Gavaskar as he was struggling to find his touch that 'tortured' Tuesday at Port of Spain. And none of the three had complimentary things to say about Sunil. All their praise was reserved for Mohinder Amarnath.

To Mohinder's credit, he made every effort to prove worthy of Umrigar's trust. He came out to bat with the added aid of the 'British' hat that his father, Lala Amarnath, used to wear in the days he faced Lindwall and Miller. But it was no go. Come an extra-fast one from Rodney Hogg and Mohinder negotiated it so awkwardly as to fall like a pole-axed bull on his wicket. As he got up to leave, complete with that hat and all, he looked an antique piece. Certainly, every single person present at the Wankhede Stadium that day wrote Mohinder off as an India Test player.

That was in November 1979. By December 1982 Mohinder had bounced back and how! Even so, there remained a question-mark against his name until he went to the West Indies and faced two *equally* fast bowlers from *both* ends at one and the same time. Now Mohinder's done that and done it in style.

Only once has his concentration wavered since he came back. This was in the first innings of the Sixth Test against Pakistan when, showing the first signs of 'overconfidence', Mohinder chased an Imran ball that was almost a wide outside the off-stump and was caught behind. After that, he's got his head (helmet and all) down and been the linchpin of the India batting. He has been the most steadying influence on a team reeling under the loss of equilibrium created by the departure of G.R. Viswanath and the non-performance of Gavaskar.

What ails Gavaskar? He certainly seemed determined enough when he rejoined the India team for the Kingston Test. He was all concentration and application as he started out in difficult conditions at Sabina Park, after Clive Lloyd had won the toss and asked us to bat. He looked set for a big score when he was dismissed on that opening day of the series. But, starting with that second innings in which he exposed his leg-stump for it to be knocked out of the ground by Mike Holding, Sunil's just not been able to put things together.

His tantrums during the lesser match against Trinidad and Tobago would seem to have cost Sunil dear in retrospect. There was no excuse at all for such behaviour, especially at a time when Sunil had lost the India captaincy to a younger man and every single action of his was being minutely watched. In throwing that fit, Sunil, I believe, got into the *wrong* frame of mind for the Port of Spain Test.

He has since discovered that the game is a great leveller. Sunil went to the West Indies with a world reputation. For the Caribbeans, he was 'Our Own Sunny' since he had begun building that world reputation in their country. Now, as far as they can see, he went up like a rocket only to come down like a stick.

If that sounds harsh, it must be remembered that a superstar is to be judged by the performance yardstick he sets for himself. Indeed, there have been times when I have wondered whether all those tantrums of Sunil were not geared to adding to the mystique of his personality. Look at Viswanath. He was the epitome of elegance on the field and the picture of humility off it. For all that, when he was dropped, he was swiftly forgotten. Sunil, on the other hand, has all along managed to keep the spotlight on himself—on and off the field. But perhaps a stage has been reached when the whole exercise is beginning to prove counter-productive.

True, this is not the first time Sunil's been 'on the brink'. He was in a similar tangle when he returned from the tour of Australia and New Zealand early in 1981. He was certainly unrecognisable as the old Sunil the way he faced the swing of Ian Botham in the Nov-Dec 1981 Bombay Test against Fletcher's England. Still he pulled himself together after that—albeit on our own wickets. But, soon after, he had massive problems all over again—this time against the pace of Imran Khan. And now he is up against the full battery of Windies pace!

The odds could not possibly be more heavily stacked against Sunil than they are now. But they are no more heavily stacked than they were in the past when Gavaskar showed a similar genius for working himself into an 'impossible' situation. Sunil's always believed that, when a batsman is doing all the wrong things, no amount of friendly advice can help—he has, in the end, to find his own way out. Maybe Sunil will discover that way at Georgetown. In the interests of Indian Cricket, one hopes he will—unless, of course, he is ruled as unfit to play that Test.

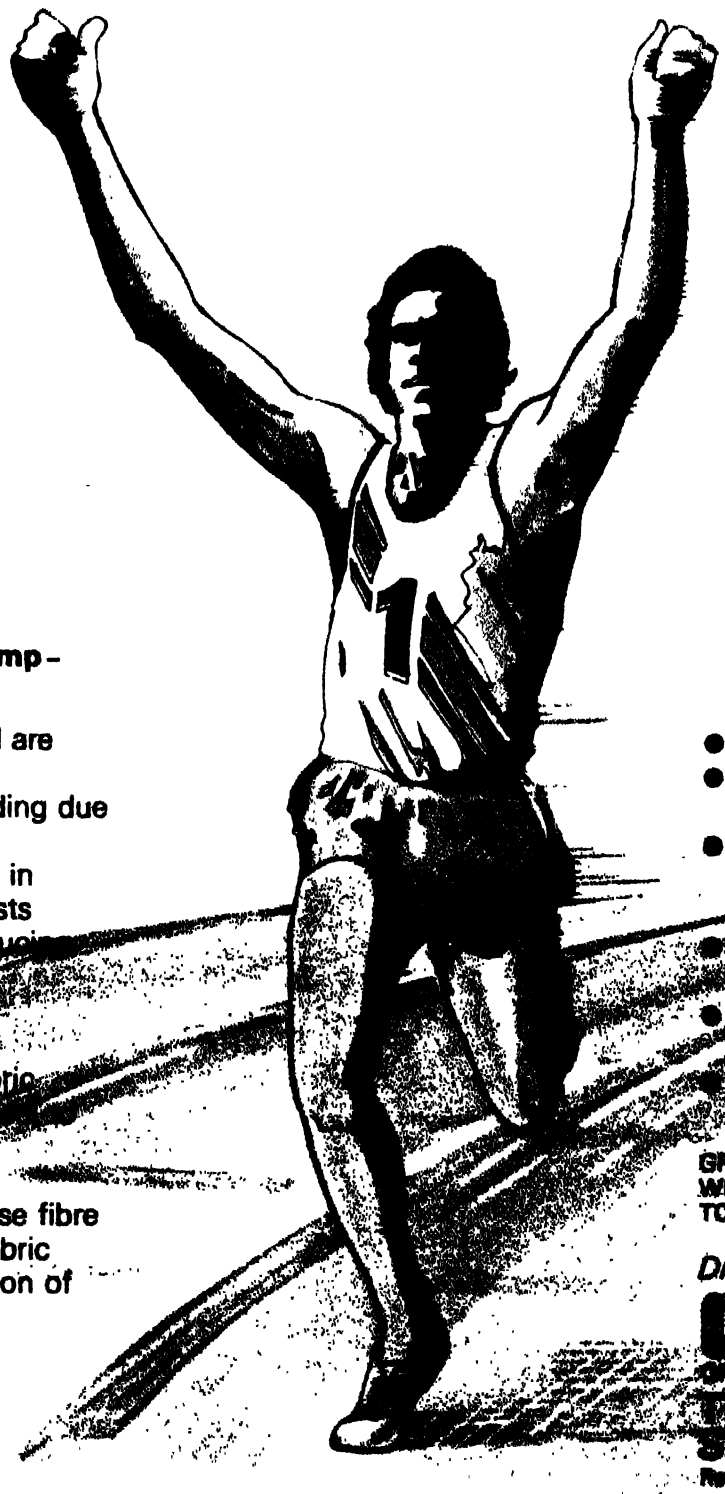
Grasicrimp
the new high-crimped wonder fibre
...a runaway success

Grasicrimp fibre blends beautifully with acrylic and wool. It gives excellent results with knitted and woven fabrics.



Advantages of Grasicrimp - Wool blends

- Reduces mixing costs and are more economical
- Allows homogenous blending due to the absence of gilling
- Enables higher production in spinning due to fewer twists
- Gives a softer yarn by reducing the harshness of wool
- Adds to wearing comfort
- Gives stronger yarn, consequently, a better fabric
- Gives a better drape and handle to the fabric
- Has better dyeability as compared to normal viscose fibre
- Can give an all-weather fabric depending on the proportion of Grasicrimp in the blend

Advantages of Grasicrimp - Acrylic blends

- Economical to blend
- Adds to the wearing comfort due to high moisture absorbency
- When suitably blended the high bulk of acrylic fibre is ideally counter-balanced
- Available in various deniers to suit blending with acrylic
- Grasicrimp fibre is available in both dull and bright finish
- Available in required shades to match acrylic

GRASICRIMP IS AVAILABLE IN WHITE AND IN VARIOUS SHADES TO SUIT YOUR MILL'S REQUIREMENTS

Direct your enquiries to:

THE GWALIOR RAYON SILK MFG. (WVG.) CO. LTD.
Registered Office: P.O. Birlagram, Nagda (M.P.).

The Family Man—II

by Charles H. Heimsath

Pleased at having befriended the saffron-clad mother and child, the American businessman looked forward to meeting them again for dinner that night. Would she come?

By mid-afternoon he returned to his beat, as he thought of it—a regular programme of goodwill visits to businessmen and research scientists in the city, people he sometimes dealt with officially but in any case should cultivate to keep himself aware of their activities. It was by this means that he often knew weeks before his competitors did what tenders were to be invited.

He prided himself on how widely he circulated, how many top level people he knew well. In fact, he was often a source of information to Indians on advances in his field. Why did most Americans draw back from entering the Indian market, he often asked himself. Plenty of business here; you have to make a few adjustments in working style and you can step in easily. No one is wary about American capitalism; in fact they admire us, he had discovered years ago. Anyway, luckily for him no other American firm was competing in his line. Let the others discover for themselves, he thought, what they've been missing.

By six he had gone through his list, and he took the car back to the hotel. He bathed, ordered soda and ice and poured a drink from the bottle he'd brought along. At eight he walked two flights down for dinner.

There she was, the little girl in her arms, smiling at him from the centre of the lobby as he reached the end of the stairs. She had seen him coming and moved towards him. They shook hands warmly, once she had adjusted the child on her left shoulder.

"She's no better," said the woman abruptly, "even though she slept the whole afternoon. That's why I couldn't get here for lunch. I'm sorry."

"Please, I understand. What about dinner now? Can she eat anything?"

"I think she's really hungry. Thanks. She hasn't had much all day." The woman followed him towards the main dining room with its elaborately padded door.

"Let's see whether they've got the airconditioning on in here," he suggested before they entered the dining room. "If it's cold we ought not to bring her inside." He was looking at the flushed face of the child. The woman smiled again.

This woman always smiles, he thought suddenly. More smiles than talk. This time the smile conveyed thanks that he understood about children with fevers.

"It's ok," he decided, entering the room tentatively, trying to judge whether there was a blast of iced air that they would have to avoid. "Let's sit over there, and she can lie down if she wants to," he said, gesturing toward the tables against a bank of upholstered couches.

"I just can't believe I'm in such a place," remarked the woman. "It's such a surprise! Such a pleasant surprise." And then just before seating herself and without a word of explanation she leaned over the table next to theirs and embraced a young bearded saffron-clothed man by kissing him on each cheek. So she does have friends, he thought, and then carefully, trying to appear casual, exchanged nods with the bearded man.

"He's a friend from the ashram," she explained, "a karate instructor. We know each other from the last time." And after that she ignored the man completely. Well, it's the normal French greeting, he consoled himself, she isn't attached to him.

But why should he care? What claims did he have on her? Was he jealous? Quickly he threw aside these questions as irrelevant. For God's sake, he told himself, this is nothing more than a pleasant evening! Look after them for an hour, as a gentleman would, and bid them adieu. He settled back into the role of a gracious host, nothing more could be permitted.

"*J'ai faim*," said the child and began to cry. They were now ordering the meal and the girl could tell that food was available.

"It's a good sign, she's hungry," he observed. "What would she like?"

"Oh, she'll just eat from our plates", replied the woman. "You order, please."

He chose two dishes neither of them spicy, and asked the waiter for some lime and soda at once and also some wafers for the child, the kind he knew that the hotel used to ornament squares of ice cream.

The child sat upright at the table and did not, he noted, look as sick as she had earlier. They discussed childrens' fevers for a few minutes. The woman was careful about health, he was glad to confirm—both the child's and her own. Indeed, as their conversation moved to →

Illustrated by Francis R. D'Sa

talk about the ashram she told him more about the guru's admonitions on body fitness.

"There is a good kitchen at the ashram," she told him, "with simple vegetarian food, no spices. Plenty of milk for my daughter. And I drink milk too." She added this laughingly, maybe a little embarrassed that the French in India were reduced to drinking milk, he thought.

THIS was the first mention of the relationship between the woman and the girl, he realised. "I assumed she was your daughter," he said, partly to leave an opening for further explanations.

"Her father is German," she continued, looking at the girl's almost platinum blond hair and went on in what seemed to him to be a natural tone: "We met here at the ashram, and the baby was born in Germany. We're not married but we meet, and he sees her."

Nothing unusual about this situation, he thought. He had heard disparaging remarks by Indians about the Master Spirit's invitation to his followers to indulge promiscuously in sex, his own bevy of mistresses, his occasional telling of dirty stories. So what, he mused, that's what this generation does in Europe and America, so naturally sexual freedom follows them over here. The guru is just moving with the times, keeping abreast of his flock, adding may be the the spice of classical Indian references to sex—which are abundant—to the more pedestrian mores of the liberated West.

He hadn't volunteered any personal information, nor sought any from her during their short acquaintance. It was much more natural to assume that they were both people with normal attachments and enjoy discussing general topics. But she had brought up an important bit of her personal background and it might reasonably be followed a step further. "You're called Ma Prem Priyo?" he asked, hoping that he was pronouncing the strange name correctly.

"Yes, my real name is Marie Pauchet. But Savitri is in fact my daughter's real name; it's that way on her passport". She looked fondly at the little girl, who was busy munching the wafers and at the same time digging her fingers into the sugar bowl. The kid is really hungry, he observed, obviously not seriously ill.

Then he spoke about his children. The meal came, they cut choice morsels for the girl and he talked about his wife and three boys. Not a great deal, just enough to let her know that he was contented with his wife and reasonably proud of his boys, who were in college or working back in the States.

"I always wanted a daughter..." he began. She cut in, "And now it's too late?"

"Well, I guess I'm finished with that now," he admitted, then self-consciously turned to his half-finished plate thinking that she might be passing a quick judgement on his age and virility.

Then they talked more about her experiences in the ashram. She told him how the place looked, what the followers did—carpentry, printing, weaving, dancing, theatrics, as well as yoga and meditation. "We're not sitting around in a trance. We learn to know ourselves better through self-expression in almost every form imaginable. Why, there's one man learning to walk the tight rope!"

"Sort of like zen and the art of motorcycle maintenance." He spoke to encourage her to continue.

"Yes, that's it. You can't be any good spiritually unless you discipline your body by tending the mundane details of life," she went on, plainly enjoying his receptivity to the subject.

"But you're here to escape, aren't you?" he finally said, looking at her seriously, testing her reactions to a sudden shift in his genial manner.

"Of course I'm escaping!" she replied at once. She showed not a trace of dislodgement by his sudden question and he admired her self-assurance. She pushed right ahead on that note. "I'm escaping, as we all are here, from the cruelty of Western civilization, from its senseless drive for bigger and bigger things. We hope to be here, not there, when the end comes, and the West blows itself up over oil—or some other stupid thing!"

Well, this is what's inside the girl's head, he thought and sat back for a moment or two letting her words sink in. While he pondered what to reply she turned towards her daughter and tried transmitting more of her roast chicken to the child's plate. The little girl protested that she'd enough—"*Suffit, Suffit, Maman*"—and while the expected offerings and rejections continued he tried to think of a counter-argument. There was no adequate response to her main point; he could only make a reference to India's blatant inhumanities or offer a simplistic assertion of faith in Western civilisation.

He tried the latter approach, realising how sophomoric he sounded, listing the West's achievements in philosophy, science, culture. She cut him off. "That's what we've *lost*," she said "It's gone, for good. Now maybe these people, these Indians will adopt our virtues and save them for us over here. At home we've lost them!"

She was serious and for once didn't smile. But he could tell that she was happy at the thought she had just enunciated. She would be here in the ashram when Europe and America reached the end of the line: that was her idea. She and the others like her would then be responsible for interpreting to contemporary Indians what had gone wrong in the West. She and her fellow ashramites would survive the blast and the fall-out, would settle here forever and with the Indian intellectuals define the nucleus of the new world order to emerge from the wreckage of the old.

Actually the idea amused him; it had some kind of logic. India, after all, was the land of the Aryans, the original Europeans, and it was appropriate that it should survive the excesses that Europeans had devised for themselves. If Ma Prem Priyo and Savitri and the other saffron-clad young men and women here thought they could carry on the great traditions of the West, under the protection of their guru—who after all gave his daily discourses in English—well, so be it! This group was not devoid of talent. Let them carry on, he thought, after he'd returned to the source of all the world's troubles, the United States. He laughed at his own cynicism.

Anyway she was too pleasant to argue with, he decided. Both of them, furthermore, and the child too, had been abundantly fed and were not in an argumentative frame of mind. He could sense the contented mood and was pleased with himself for having given the three of them a reviving meal. The girl had crawled over to her mother's lap and was almost asleep.

"We'd better go," he said, "or your daughter will be asleep." As always the attentive father, he thought to himself.

"But you haven't had your coffee," she replied. The woman would stick to proprieties, he thought, out of habit.

"Not tonight. Thank you." He turned away and made a move to rise. "I think you really ought to get her to bed," he said, turning back towards them for a moment. "She ought to be fine in the morning," he continued. The woman nodded her assent, readjusted the little girl's weight across her chest, and pushed back her chair. He helped her to rise.

As they walked among the tables towards the restaurant exit he saw himself escorting a woman who could well appear to be his wife, carrying a child that could be his own. He assumed so easily the role of husband and father that he wondered if others were just then confirming his own image of himself. But the saffron garb of the two in front of him did indeed set mother and child apart from the would-be husband-father in the rear. Realising that, he slowed his pace, extending his distance from them. Just as well, he thought; this pretence of a relationship was not a game he wanted to play.

They entered the lobby. The brighter lights altered the little girl to her new surroundings and she cried out and began to squirm. "Savi has to go to the toilet," explained the woman, looking around for a ladies' room. He quickly asked directions from somebody. It was one flight up the main staircase.

As they walked up he automatically considered the problem of getting the child to use the public toilet without touching anything that might be contaminated, a problem he had often faced with his own children, not always successfully.

"Why don't you take her to my room," he said almost without thinking. "I'm just another flight up, and the bathroom is clean there." At once she accepted the offer, circled the elevator shaft and kept climbing the stairs, increasing her speed as the child's discomfort became more evident. Then down the hall, and they entered his room.

A reading light was lit next to one of the two beds, which had already been opened up for the night. He signalled to close the bathroom door and the woman and child entered at once.

She looked out through the half-opened door a minute later, the child clearly having been left on the seat. "Oh, you have hot water," she said smiling as usual. "May I give her a very short bath? We have no hot water at home, and..."

"Yes, of course," he replied and she closed the door.

What a natural thing to do, he thought. He felt tired and sat down on the bed. This woman knows what she's doing, let her have her own way. I'm just providing the conveniences, nothing more. He let his thoughts turn lightly to the magazine he had started during lunch; he picked up the threads of a news story about Afghanistan. Then he heard water running and splashing, muffled sounds of directions being given in French for washing this or that part of the body. The washing stopped. He read on. Then the bathroom door suddenly opened.

The little girl, dressed and beaming, ran out straight to the second bed, where she flopped over its side on her stomach. After a moment the woman followed, but in singularly altered attire. She had taken off her long dress, probably to avoid wetting it with the child's bath water, and now wore it horizontally wrapped around her mid-section, one side just above her breasts tightly gathered and tucked in, the other reaching to her lower thighs.

"I'm so sorry!" she exclaimed. "Savi just ran out..." She continued in French to the child, who was meanwhile making herself comfortable in bed.

"Better cover her," he said, recalling the fever. The woman pulled back the spread and covered her child with it, looking over at him with a little grimace of embarrassment. "I'll finish right away," she said, walking swiftly on tip toes back toward the bathroom.

"Take a shower, if you like," he told her in a matter of fact voice while looking back to his magazine. She did as she was asked. It was five minutes before she reappeared.

By then the child was asleep. They said nothing, neither one wishing to interrupt nature's way to cure fever. She joined him, sitting at the end of the bed and looking over at her daughter. He put his reading aside and switched off the lamp. There was no thought except of the peacefulness of the moment, the extraordinary simplicity of the scene, which led him to reach down to her. "Yes?" he asked softly when he felt her arm.

"It's normal," she answered and slipped over to him and rested her head on his chest. She pronounced "normal" in the French manner and this reassured him because it meant that the night would pass and he could resume his life tomorrow as if nothing had happened.

WHEN he awoke, the light from the bathroom still formed a rectangle on the wall opposite his bed. He had no idea of the time. The child still slept across from him, now fully covered with a blanket. The fan whirred to keep away mosquitoes. He turned carefully, so as not to awaken the woman.

She was not there. He looked again at the open bathroom door, again at the child's bed, dug under the pillow for his watch. It was five o'clock. Where was she? He rose, naked, and entered the bathroom. The woman's clothes were gone.

Lying on the bed a moment later he stared over at the little girl. What would he do when she awoke? How would he explain her mother's absence? Would she be scared of him? Would his French be good enough to converse simply with a child? He realised with apprehension that he'd never slept before in a room with a small girl.

He checked his thoughts. Would not the woman return before the child awoke? That was the crucial question. Why was he assuming that she would not?

Jolted from sleep into an unplanned situation, he found himself adjusting by mentally re-ordering his life. He had a three-year-old girl who was his responsibility. The mother was gone. If she'd planned to return she would have written a note explaining when. His mind worked over the likely problems of the next few hours. The reaction of the hotel people when he appeared with Savitri. He figured he could manage them. But would the child cry? Was the child still sick?

Now he was fully awake and dressing. When Savitri awoke he would greet her calmly and tell her that her mother would return shortly. *"Maman reviendra toute de suite..."*. He practised what he would say.

As he planned his moves his mind eased. It would go smoothly, he thought. He visualised having a daughter, how he would care for her. For a moment he allowed himself to imagine taking the girl to Bombay, taking her home. He would explain to his wife how this had happened—not every detail, just the broad picture of being left with a child who needed a normal home.

His careful planning paid off when the child awoke. There was no scene, no crying. Savitri actually talked to him. She asked him for a comb. She wanted to know what they would have for breakfast. Satisfied that her mother would return she turned out to be a very secure little girl. Best of all, her fever had gone. She was well.

He took her hand as they descended the two flights of stairs to the lobby. He glanced proudly at the small girl wearing a long saffron coloured dress walking quietly beside him. He thought she looked good with him and permitted himself the hope that this scene would be repeated often—a father and a daughter walking together in a trusting, accustomed way.

She looked up occasionally and spoke a few words—she wanted orange juice, one of her shoes felt loose—and he replied as best he could in her language. She seemed satisfied with his answers, with his company.

They sat at the table they had occupied the day before. He ordered orange juice and porridge for the girl and sprinkled sugar and poured milk when it came. While they ate he made his plans for the day.

He would take Savitri to the ashram and ask about Ma Prem Priyo. When they told him that she was not there he would get her address and drive to her place. She would have packed up and left—probably with the karate instructor; the two ashramites would later be reported to have disappeared into the Himalayas.

"Maman! Maman!" He was just offering the little girl a glass of milk when she suddenly sat upright and called out. He looked up. There was Ma Prem Priyo. She was smiling. ■

Amar Chitra Katha

Fascinating picture stories from the past filled with fun and learning.

Yes. Amar Chitra Katha really has something of interest for every child. Exciting stories of great battles and legendary heroes – for those who love adventure. Delightful stories from history and folklore – that appeal to the imaginative. Long ago tales of wit and wisdom that are such fun – even today!

Amar Chitra Katha. What a wealth of information and entertainment! Page after page – the glory of India's past unfolds with colour and excitement. Soordas. Tansen. Babur. Birbal. Great people and great events. They all come vividly to life in the 278 titles of Amar Chitra Katha. Available in 6 regional languages, as well as in English and Hindi.

Amar Chitra Katha. It's not only learning history while having fun. It's learning to be proud of a great country. And a great heritage. Because it's the past that has made us what we are today.

Annual subscription of Rs. 84/- for 24 issues of Amar Chitra Katha to be sent to

"WHY is your car painted blue on one side and red on the other?"

"It's a great scheme. You should hear the witnesses contradicting one another."

A MOTORIST speeding along at 80 miles an hour was stopped by a policeman.

"Was I driving too fast?" asked the motorist.

"Hell, no. You were flying too low."

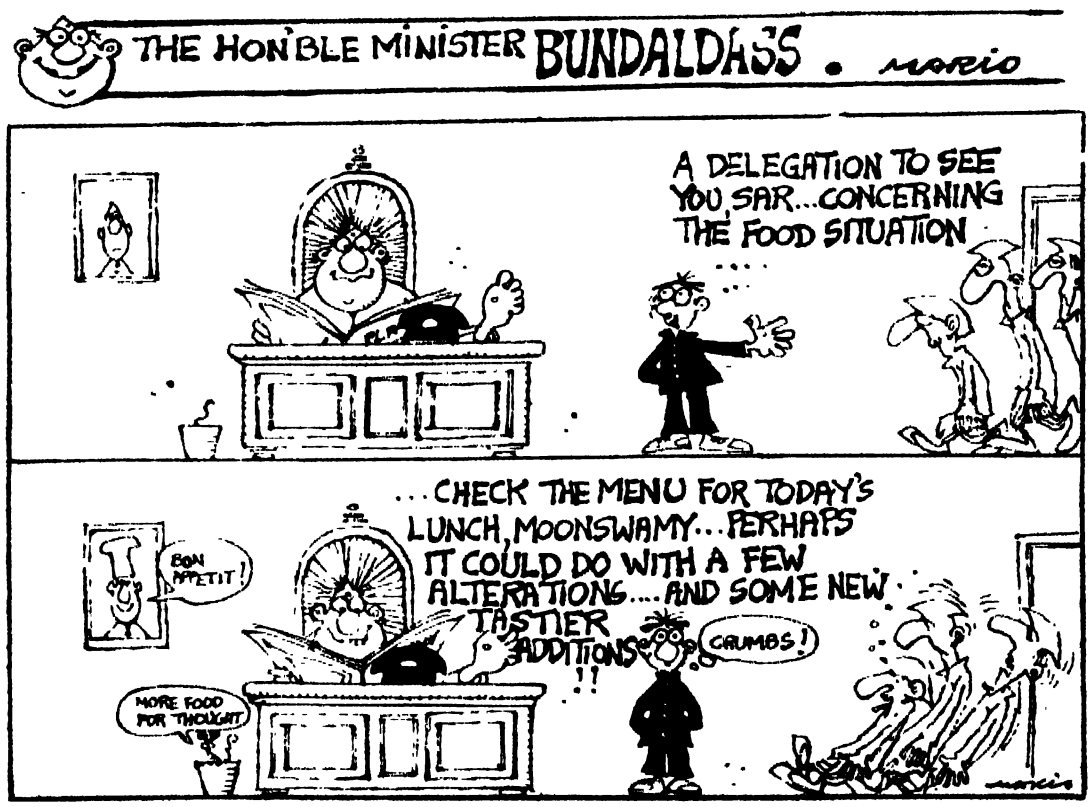
"WHAT part of the car causes the maximum number of accidents?" "The nut that holds the wheel."

JANET: "What do you do when you see an unusually pretty girl?" Anna: "I look for a while and then I get tired and put the mirror down."

AN English statesman visited Russia and after several toasts back and forth, he made a speech in English which had to be translated for the benefit of his Russian hosts. In the course of his speech he quoted from the Bible and said, "The spirit is willing but the flesh is weak." The Russian interpreter was flabbergasted into momentary silence but quickly recovered and translated: "The vodka is good but the mutton is rotten."

"Look dear, I've brought something for you—something absolutely free!"

REMARKED the shrewish wife of a struggling author, to a neighbour: "My husband, who fancies himself a writer, has just sold four articles—his wrist-watch, his overcoat and his two suits."



"BROKEN off your engagement to Mary?"

"She wouldn't have me."

"Did you tell her about your very rich uncle?"

"Yes. That's how she's my aunt now."

A PASSENGER in the airplane was high up in the sky when the pilot began to laugh hysterically.

Passenger: "What's the joke?"

Pilot: "I'm thinking of what they'll say at the lunatic asylum when they find out I've escaped."

AN American G.I., stationed in Vietnam, was once asked what the abbreviation stood for. "Aw, I really don't know," he said scratching his head, "maybe Galvanised Iron."

THE story goes that during World War II, a fiery-tempered infantryman in Burma was once hauled up before the Commanding Officer for calling his British Captain an "S.O.B." Asked if he knew what the offending letters stood for, the accused promptly replied, with remarkable ingenuity, "Soldier of Britain, Sir!" He was allowed to go scot-free.

WHEN a man argues with a woman, it's invariably a case of "He came, he saw, he

THE two cannibals were lunching when one remarked "I hate my mother-in-law."

"It's all right," replied the other, "Why don't you eat the vegetables?"

A MAN and his wife were talking about the most recent wedding scandal. "Just think," said the wife, "it was just as the bride was coming down the aisle that the groom suddenly turned and ran from the church and skipped town. I guess he lost his nerve."

"Oh, I don't think so," said the husband. "I figure he found it!"

THEN there's the story of a very naive girl who, hoping to get rid of an undesirable boy-friend—a doctor—remembered an old saying and religiously started eating an apple every day.

WITH his marriage round the corner, Bob, the local Romeo, was worried about his financial position.

"But why should you worry about money when you're going to make dozens of girls happy," remarked his pal, Willy.

"But I'm only getting married to one," Bob retorted.

"No doubt," said Willy, "I'm thinking of the ones you're not getting married to."

THE new man in town told his neighbour, "I have come out here to make an honest living."

"Well," said the neighbour, "there is not much competition."

A YOUNG playwright gave a special invitation to an editor to watch his new play. The editor came to the play, but slept through the entire performance.

The young playwright was indignant and said, "How could you sleep when you knew how much I wanted your opinion?"

"Young man," said the editor, "sleep is also an opinion."

EVERY chair in the doctor's waiting room was taken. Several people were standing. There was no word from the doctor.

Finally, after waiting for a long time, a patient stood up wearily and said loudly, "Well, I guess I will just go home and die a natural death."

A MAN and his friend were talking about their wives.

"My wife is very touchy," said the friend. The least little thing sets her off."

"You are lucky," said the man. "Mine is a self-starter!"

"YOU look like a nice, sensible girl. Let's get married."

"Nothing doing. I'm just as sensible as I look."

BABY Ear of Corn: "Mama, where did I come from?"

Mama Ear of Corn: "Hush dear, the stalk brought you."

HAVE your parents given their consent to our union?"

"Not yet. Father hasn't expressed his opinion yet, and mother is waiting to contradict him."

"SO Elsie returned your engagement ring?"

"Yes, she mailed it to me and she had the nerve to paste a label on the outside of the package—"Glass: handle with care."

FATHER: "I do hope you appreciate that in marrying my daughter, you are getting a very big-hearted and generous girl."

Young man: "I do, sir. And I hope that she inherits those fine qualities from her father."

SHE: "Now that we're engaged, dear, you'll give me a ring, won't you?"

Mr. Tightfist: "Yes dear, certainly. What's your number?"

Compiled by Pramilla Rodrigues

Here we are, taking up from where we left off last week. We await your view from atop the Quiz Mountain. From up there, write and tell us how you find the quiz landscape.

ART FOR ART'S SAKE

We are all convinced that deep within the material us, there is this brilliant little creative person, struggling to get out Be that as it may, Art is a happy hunting ground for Quizpersons and any Quiz worth its name is bound to contain a number of visual and verbal questions taken from books on Art and Sculpture The choice is so enormous that it is not easy to be fair Let us hope we have been.

The Quiz Mountain

Levelground (1 mark per question)

1. In Athens, the Acropolis is the hill What is the temple on it called?
2. This deformed, bearded, brilliant French artist spent many a night at the Moulin Rouge and used its table tops to sketch Who was he?
3. This renowned Swiss architect drowned in the sea whilst swimming Nehru got him to design Chandigarh Who?
4. Scion of a famous Bengali family, he originated the Bengal School of Art Who was he?
5. He drew astonishing sunflowers and potatoes and billiard tables and cut off his ear and did a self-portrait with one ear missing? Madman? Genius? Who?
6. Which Indian painter did the Durga series which some believe symbolize Mrs Gandhi?
7. Someone made the Campbell soup-can much more than something which just contained soup. Who?

Uphill (2 marks per question)

8. Where in India would you find the painting we call the Bodhisattva Padampani?
9. Someone painted a portrait of Churchill which was so controversial that Lady Churchill had it destroyed Who?
10. A French painter went to the South Seas and painted its women in all their lush glory Later he was the model for Charles Strickland in Maugham's "The Moon and Sixpence". He was the true breakaway man Who was he?
11. The North West Frontier Province did not only produce superb home-made rifles and wild-eyed tribesmen In the period after Asoka, it nurtured a special school of Indo-Greek art. What was this school called?
12. A moustache on the Mona Lisa? Yes Who was this subversive genius?
13. In a way, J Buckminster Fuller did something as radical to the concept of structures. What did he invent?
14. Specifically please, who does a Madhubani painting?

Summit (3 marks per question)

15. "Si monumentis requiris, circumspice " If you seek a monument to me look around you What do you see?
16. What is the name for the niche or slab in a mosque which indicates the qibla or direction of Mecca?
17. Which artist defined his drawing as taking a line for a walk?
18. Years later, our lives become a sepia photograph. Maybe, but what is the sepia colour prepared from?
19. Talking of photographs, what is a "conversation piece"?
20. In what kind of structure in India would you see a "harmika" and a "vedika"?
21. Our Ancients visualised the ideally beautiful woman by drawing on symbols from nature. Her hair was like a swarm of bees What had her legs got to be like?

Answers

1. Parthenon Most people would say Acropolis, so I helped. 2 Henri de Toulouse-Lautrec. 3 Le Corbusier, Charles Edward Jeanneret. 4. Abanindranath Tagore (1871 1951) 5 Vincent Van Gogh. 6. M.F. Husain. 7 Andy Warhol, of Deep Throat fame. 8 Ajanta caves. 9. Graham Sutherland. 10 Paul Gaugin 11. Gandhara school. 12. Not Salvador Dali. Marcel Duchamp. 13 The humped, semi-circular Geodesic Dome. 14 The woman of Bihar. Usually as an offering to their menfolk. Particularly at marriage time. 15. St. Paul's Cathedral, London. The is the epitaph for Sir Christopher Wren, builder 16. Mihrab. 17. Paul Klee 18. Sepia is a brown pigment prepared from the black fluid emitted by cuttle-fish. 19. In photographs or in paintings, a family portrait in domestic surroundings. Semantically, an ice breaker. To break silence: When was the done? And you are on your way. 20 In Buddhist stupa. A "harmika" is a sort of balcony set on top of the stupa; a "vedika" the railing built round the exterior of the stupa, not,as you thought, the altar. 21 Like the trunk of a skinned banana plant. Good if not?

—Partha Bas

Scoring

Our score: 32
10 to 20: You know it is there and you care
21 to 30: If only your father had listened to you...
31 and over: See you in the Louvre
Below 10: Hand in your paintbrush

A Morris Minor And A Mixed-Up Major

FROM the day she saw it on the road in our town my wife was no longer my wife She had been virtually mesmerised by her childhood memories BMU 6490 was a Morris Minor, decades old, as all Morris Minors are. It had belonged to an old Parsi gentleman who had maintained it very well In fact he had maintained it better than his health, with the result that the latter had failed before the car and so the car was put on sale. My father in law bought it. He, his wife, and his daughters, the youngest of whom I happen to have cast my lot with, years later, used it for many years

I had always wondered how a family of eight could ever have piled into a car of that size, so when we saw it, I also got interested My wife of course raved about its feats, one of them had included racing against the labour pains of a neighbour and delivering her to the nursing home ahead of her child. Funny way of putting things, I thought. Anyway she insisted we go and meet the owner "I just want one ride in it We had so many when we were so high," indicating her height then.

We decided to meet the owner so we located his house and one day I called on him No resistance was offered at the gate, so unmolested, I entered the drawing room The drawing room, a fairly large one, was shared, in that order, by a Victorian sofa-set, a Mullard radio perched uncomfortably on a huge intricately carved mahogany table with curved legs, three or four calendars, a large dog and an old man- -all of them about 75 to 80 years old The dog, in keeping with the habits of that species, obviously did not like my intrusion but was too preoccupied to do anything about it. The old man also agreed with the dog but had to do *something* about the intruder so he looked inquiringly at me, protecting his chest with a newspaper. After the initial shock of a total stranger landing in their midst was diffused by proper diplomatic manoeuvres, I once again brought up the reason for my visit

"I am here because I am interested in your car" I said, picking up the relevant one from his many questions

"I am also, very much" he said happily.

"I mean....er....I mean, you see my wife....it belonged to my wife's father and the family had used it when she was so high," I repeated my wife's gesture, hoping to lighten the atmosphere but he seemed astonished. "Oh! Really! But I have not seen her grow since I bought her" he exclaimed in genuine wonder Disaster was imminent if the course of the conversation was not corrected immediately.

"No, no. I mean my wife. When my wife was so young she had used it and..." "I see. But that was very wrong. You see, children should not be allowed to touch the car at all. See Pushpa, I told you someone had misused . " Pushpa was nowhere around but it did not seem to matter at all and he would have continued.

"Just a minute. Just a minute. Please let me clarify. See, your car BMU 6490 belonged to my father-in-law many years ago...." I was again interrupted.

"Yes, yes, I can readily believe that Why, a friend of mine is using his Morris Minor since the thirties. Such a sturdy car " This was rather exasperating but I persisted.

"Your car belonged to my father-in-law many years ago when my wife was just a child and... "

"You must have married very young Child marriage? Was it? You know... " "Please listen" I butted in, to stop a lecture on this social evil, "To be very precise, if you insist, years ago your car belonged to a gentleman whose daughter I married..... "

"How old was she? I want to know," he demanded. I realised that I had no alternative than to first settle this thorny social issue

"Please rest assured that it was not a child marriage "---I found myself dragged willy nilly, into clarifying my matrimonial matters. "My wife was 24 when we were married. Anyway, I have come to request you to let us see your car " I finished in one breath, like a sprinter.

"Please rest assured that it was not a child marriage," I found myself dragged willy nilly into clarifying my matrimonial matters. "My wife was 24 when we got married. Anyway that is not relevant at all I have come to request you to let us see your car, if you have no objection," I finished in one breath like a sprinter

"But my car is not for sale. Who told you so?" he asked in all curiosity. This is better, I felt. I was glad that at last the conversation was back onto the main track.

"Of course not, I know " I could hardly restrain my enthusiasm. "My wife wants to see it.... "

frown on his face. We were back to square one.

"Your wife wants to see my car? Why?" he asked with furrowed eyebrows and a sort of softness in his voice now. His de attachment to the car and its memories w evident in his tone. I somehow felt that he w not the same old man who had grilled me while ago

"She travelled in that car when she w a child" I ventured and added for cautio "and not yet married to me. The car th belonged to her father."

"Oh! How sweet! How sweet indee Where is the child? Please call her in. Pushp listen. Can you hear me? See this ch has...."

"Not the child....." I wanted to explain b I need not have. He was not listenir Oblivious to his surroundings, he had an again floated back a few decades.

"Did she have an accident with it?" "N no, no No accident at all!" I emphasise gesticulating wildly. "My wife is interested seeing your car because she has a nostalg attachment to it," I once again did th one-breath trick

"So have I. Such a good car." His count nance mellowed and he grew quite roman as he reminisced, and savoured the memo ies of his past. I hated to shatter his reve but I had a job to do—which was to withdr nicely, having already given up the idea wi which I had come I stood there silent waiting for him to say something He fina spoke

"You said your wife has a nostalg attachment to my car. Why?" There was

Sudhir Vaishnav

Next Week For You

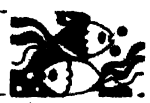
S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Do not take up any challenges this week. Respect the words of those in authority. Honour the advice of elders while launching new schemes or projects. You are better advised to postpone their implementation. Take care while driving. Do not sign any important documents midweek. Saturday is the lucky day.

AQUARIUS
(Kumbha)
Jan. 20-Feb. 18

Two things are extremely essential: avoid a journey or a public appearance and do not challenge those in authority. Investments in building and machinery should be postponed for the time being. Scientists and research scholars should avoid risky experiments early in the week. Be restrained in your activities.



PISCES
(Mina)
Feb. 19-Mar 20

This is going to be an upsetting week. Nurture a newly-formed friendship. Do not bring about a family feud for petty reasons. Those in love should not allow complications in their relationship but keep their minds clear and healthy. A journey by road, rail or air should be avoided in the early part of the week.

ARIES
(Mesha)
Mar 21-Apr 20

Do not be reckless in your activities or over-adventurous. Seniors and elders should be treated cordially and respectfully. Be pleasant to all in and outside the home in the early part of the week. A bad judgement on your part may cause an accident, midweek. A piece of secret information comes to you.

TAURUS
(Vrishabha)
Apr. 21-May 20

As far as possible do not get involved in others' affairs. Favours of the recent past will be repaid this week. You may be slightly disturbed early in the week. Do not place too much trust in associates, partners and followers. Consult experts before launching any new projects. You may have to travel suddenly.

GEMINI
(Mithuna)
May 21-June 20

The generation gap widens this week and intensity of the differences is so great that it completely disrupts all domestic peace. A similar situation arises in the life of the love-lorn. Enmities and petty jealousies cause much tension, midweek. Deal with strangers and foreigners cordially. Clear all backlog.

CANCER
(Kataka)
June 21-July 20

Your theories and opinions may be perfectly right but others will refuse to see your point of view. Politicians and social workers face certain unexpected reverses. Avoid speculation of any kind. Those in love should not develop prejudices. Guard against possible dangers midweek. Do not trust strangers.

LEO
(Simha)
July 21-Aug 21

Your own obstinacy will succeed in punching holes in your pomp and dignity. Management experts and Government officials may face sudden transfers Police and army officers are likely to be involved in risky and dangerous actions in the early part of the week. Long planned programmes are likely to be postponed.

VIRGO
(Kanya)
Aug. 22-Sept. 23

Health will be delicate and cause much disruption of your routine. Financial difficulties and domestic problems have you terribly worried this week. You will have to replan your schedule and rearrange your appointments, midweek. Labour problems may hault productions in the early part of the week.

LIBRA
(Tula)
Sept 24-Oct. 23

An injustice towards you will effect your mental and physical health. Politicians and social workers will face defections in their own group. Deal with machinery and vehicles carefully. Do not be too hasty while negotiating a business deal or putting through a project. Saturday eases up the pace of activities.

SCORPIO
(Vrishchika)
Oct. 24-Nov. 22

Do not cut off an old tie abruptly. Give enough scope to others to put forward their case and explain their points of view. Do not gamble, whether with personal or company funds. Certain burdens and pressures may weigh on your mind considerably. An unexpected bit of good luck helps you immensely.

SAGITTARIUS
(Dhanu)
Nov 23-Dec. 20

Do not be either over-optimistic or over-confident this entire week. A dormant rivalry comes to the force and you are inclined to have it out with the troublesome specimen early in the week. Restrict outdoor activities and refuse all risky undertakings. Domestic bliss is disrupted by knotty business problems.

STAR FOCUS

Be A Serviceman

To every nation, soldiers are extremely essential to defend the country against foreign aggression. While to some an army career is very interesting, others are not so happy about a job with the armed forces.

A smart man rises rapidly. Western astrologers, therefore, consider that the 9th degree of the Aries-Libra linkup is of much consequence to an army man. It is also essential for superiority and triumph. In the army, mere courage or aggressiveness is of no avail, unless Commanders, Generals and soldiers possess the ability to plan their moves strategically. Such ability is acquired with a Scorpio-Taurus linkup. Cancer-Capricorn 23 with a strong Saturn brings a certain degree of forethought and diplomacy.

In my opinion, Leo and Scorpio are very important, too. The former brings loyalty and grandeur and the latter tactical ability to grasp situations quickly. A good combination between Jupiter and Mars gives courage, valour, optimism, physical strength and capacity to work under stress and strain, cheerfully and obediently.

Field Marshall Von Hindenberge was born on October 2, 1847 at 3 p.m., having Capricorn (according to the Western system) on the ascendant with the Sun-Venus linkup on the meridian cusp in square to the Moon in Cancer. Nelson was born on September 29, 1758 with Scorpio on the ascendant and Mars trine to Herschel.

Sunday, April 3

This is going to be a disturbing year. You cannot afford to make drastic changes in work-life. Quick adjustments are essential to conform to the new pattern of life. Finances will be light in July and November.

Monday, April 4

A quite progressive 12-month period lies ahead of you. A gift-deed or a legacy comes your way either in August or the close of the year. There is the possibility of an accident in July or November.

Tuesday, April 5

Curb the temptation to change your job or business partner. Tolerate the embarrassements that come your way in July and November. August and October are good months.

Wednesday, April 6

Be sporting and appreciative of others achievements. Career and businesswise, the middle of July and October are slightly tricky. You may have to go abroad.

Thursday, April 7

You will do well in your job and at business in June, August and December. You may travel abroad in early 1984. July and November are slightly risky months.

Friday, April 8

A stormy sailing this year. July and November are troublesome months. Youngsters should seek vocational stability. Elders should take care of their health. You can look forward to a better period in 1984.

Saturday, April 9

The week ushers in a lucky period in your life. You will surmount many difficulties in July and November and reap the benefits of your effort in August and early 1984.

MLEA-GLR-1R

This Week's Bridge
Pietro Forquet's Classic.

I AM lucky, by virtue of my magazine, to be able to read scores of the best bridge books every year, written by some of the world's greatest authors and players. Very recently I received a copy of Pietro Forquet's "BRIDGE WITH THE BLUE TEAM." I believe I can say, without reservation or fear of contradiction, that the 140 deals presented in this book comprise the finest collection of bridge deals between two covers.

The 140 deals feature the immortal Blue Team, the Italian wizards who won seventeen World Championships in the period 1957-1975, which includes the years 1970-71 when they had retired. Pietro Forquet was perhaps the best player in the world in the Fifties, and along with Belladonna and Garozzo was one of the three best in the world in the sixties. Unlike Belladonna and Garozzo, who were daring, brilliant and spectacular, Forquet was icy, analytical, and faultless.

His selection of deals for this book, and his analyses, are just as faultless. Like this deal, for example:

Reciprocal Courtesies

This Four Spade Contract arose during an Italian Championship:

♠ 954
♥ J42
♦ AK86
♣ J76
North

South
♠ AKJ1032
♥ A
♦ 732
♣ A98

Both sides vulnerable. The bidding:

West	North	East	South
	Garozzo		Forquet
3H	P	P	4S
P	P	P	

West led the three of Clubs: six-ten-Ace.

With two Clubs and a Diamond to lose, the contract seems to depend on picking up the Queen of Spades. In view of West's Three Hearts opening the odds favour cashing the Ace of Spades and if the Queen has not appeared, crossing to dummy with a Diamond to the Ace to take the Spade finesse.

When I cashed the Ace of Spades, lo and behold, East followed with a Club. So, West had opened Three Hearts despite holding four Spades to the Queen.

How should South continue?

This was the complete deal:

	♠ 954 ♥ J42 ♦ AK86 ♣ J76	
♠ Q876 ♥ KQ108753 ♦ J ♣ 3	N W E S	♠ - ♥ 96 ♦ Q10954 ♣ KQ10542
	♠ AKJ1032 ♥ A ♦ 732 ♣ A98	

The only hope of success was to effect a Diamond Club squeeze on East. For this to operate it was vital to prepare a double rectification of the count.

Having reached this conclusion, I cashed the Ace of Hearts and continued with the two of Spades. West did best by winning the Queen and returning the Jack of Diamonds. Winning dummy's Ace, I led the Jack of Hearts (not the low one lest East hold the trick), discarding a Club from the hand. West won and put me back in dummy with the nine of Spades. I continued with a low Heart on which I pitched a Diamond. West won and returned a Heart. After ruffing and drawing West's last trump, this ending was reached:

	♠ - ♥ - ♦ K8 ♣ J	
Not relevant	N W E S	♠ - ♥ - ♦ Q10 ♣ K
	♠ J ♥ - ♦ 7 ♣ 9	

On the last trump I discarded the Jack of Clubs from dummy and East was duly squeezed in Diamonds and Clubs.

After the Club lead taken by the Ace, Ace of Spades, Ace of Hearts, Queen of Spades, Ace of Diamonds, Jack of Hearts won by the Queen, Spade to dummy's nine, this was the position:

	♠ - ♥ 4 ♦ K86 ♣ J7	
♠ 8 ♥ K10873 ♦ - ♣ -	N W E S	♠ - ♥ - ♦ Q109 ♣ KQ5
	♠ KJ10 ♥ - ♦ 73 ♣ 9	

Did you spot the trap?

When South leads the four of Hearts from dummy, pitching a Diamond, West can let dummy hold the trick by following with the three!

The contract must now fail as declarer is locked in dummy and cannot avoid losing two more tricks.

To avoid this the sure line is to play the four of Hearts, under the Ace. Then West cannot underplay dummy's third Heart, the two.

All the members of the old Blue Team star in the various hands, Walter Avarelli, Giorgio Belladonna, Eugenio Chiaradia, Massino D'Alelio, Camillo Pabis Ticci, Guglielmo Sniscalco and Pietro Forquet himself. A few of the latter day Italian stars, among others Arturo Franco, a player as brilliant as any of the old Blues, Antonio Vivaldi, Benito Bianchi and Vito Pittala, make brief appearances along with film and bridge star Omar Sharif.

Many of the hands are tough, even at double dummy. All are exquisite. Apart from play and defence techniques, many hands also give the reader an insight into the Blue Team's bidding methods, particularly slam bidding. One common element in the Blue Team's slam bidding will be a pointer for all players—if the controls were sufficient, and trump holding good, the Blue Team usually bid even thin slams. But perhaps I should sound a word of warning, by quoting an axiom I just made up: 'You can afford to overbid like the Blue Team only if you can overplay like the Blue Team.'

AVINASH GOKHALE

This Week's Chess
Double Bishop Sacrifice

POSITION No 215 is a typical example of King side attack involving double Bishop sacrifice on b7 and g7. No 216 varies slightly, the second Bishop being offered on f6.

Milne-Browne, Lasern 1983

1.Nf3, c5 2.c4, Nf6 3.Nc3, e6 4.e3, Nc6 5.d4, d5 6.dxc5, Bxc5 7.a3, a6 8.b4, Ba7 9.Bb2, 00 10.Rc1, d4?! 11.exd4, Nxd4 12.c5, Nxf3ch 13.Qxf3, Bd7 14.Bd3, Bc6 15.Ne4, Nxe4 16.Bxe4, Qc7 17.00, Rad8

Position No. 315: 18.Bxh7ch!, Kxh7 19.Qh5ch, Kg8 20.Bxg7!, Kxg7 21.Qg5ch, Kh8 22.Qf6ch!, Kg8 23.Rc4!, 1-0.

5...d5) With this move the standard position in Semi-Tarrasch Defence to Queen's Gambit is reached. The normal continuation is 6.cxd5, Nxd5 or exd5.

Averbakh-Platonov, Alma-Ata 1969: 6.a3, Ne4 7.Bd3, Nxc3 8.bxc3, Be7 9.00,00 10.Bb2, b6.

Averbakh-Vagnyan, Moscow 1973: 6.a3, Bd6 7.dxc5, Bxc5 8.cxd5, exd5 9.Bc2, 00 10.00, Be6.

Lasker-Tarrasch match, 1907: 6.a3, Bd6 7.dxc5, Bxc5 8.b4, Bd6 9.Bb2, 00 10.Rc1, a5.

8...Ba7) Teichman-Dus Chotimarsky, Prague 1908: 8...Bd6 9.Bb2, dxc4 10.Bxc4, b5 11.Bd3, Bb7 12.00, Ne5 13.Nxe5, Bxe5 14.Qe2, 00, 0-1 (30).

10.Rc1) Kurajica-Kelechevic, Sarajavo 1981: 10.Qc2, dxc4 11.Bxc4, Bb8 12.Ne4, Nxe4 13.Qxe4, Qc7 14.Rc1, Kh8 15.h4, f5 16.Qc2, e5 17.h5, Be6 18.Nh4, Nd8 19.g4!, fxg4 20.Ng6ch!, hxg6 21.hxg6ch, Kg8 22.f4, g3 23.Qe4, g2 24.Qxg2, 1-0 (30).

10...d4?!) 10...dxc4 11.Bxc4, Qxd1ch 12.Rxd1, b5 can lead to a drawish end game.

17...Rad8?) 17...Bxc4 had to be played.

20...Kxg7) If 20...f5 21.Qh8ch, Kf7 22.Bxf8, Rxf8 23.Qh7ch wins the Queen.

Batuyev-Rabinovich, Leningrad 1934

1.d4, d5 2.c4, c6 3.e3, Nf6 4.Nc3, e6 5.Nf3, Nbd7 6.Bd3, dxc4 7.Bxc4, b5 8.Bd3, a6 9.e4, c5 10.e5, cxd4 11.Nxb5, Nxe5 12.Nxe5, axb5 13.00, Qd5 14.Qe2, Ba6 15.Bg5, Nd7?! 16.f4, Bc5 17.Kh1, Nxe5 18.fxe5, Qd7 19.a4!, 00?

Position No. 316: 20.Bxh7ch!, Kxh7 21.Qh5ch, Kg8 22.Bf6!, Rfd8 23.Rf4, Bb7 24.Rh4, Bxg2ch 25.Kxg2, Qd4ch 26.Kh3, Qb3ch 27. Kg4, 1-0.

Queen's Gambit, Semi-Slav Defence, Meran Variation. Up to Black's 15th move, it is all book. Complicated possibilities can arise from 11...Ng4 (instead of 11...axb5); 13.Bxb5ch (instead of 13.00); 14...Bb7 (instead of 14...Ba6). The main line in 'Kurs Dyebutov' is 11...axb5 (instead of 11...Nxe5) 12.exf6, Qb6 13.fxg7, Bxg7 14.00, Nc5 or 00.

15...Nd7?!) 'Kurs Dyebutov' gives 15...Be7 and 16.00.

17...Nxe5) If 17.00 18.Qh5, g6 19.Nxg6!, fxg6 20.nxg6, hxg6 21.Rf3, Qxf3 22.gxf3 and White's attack should win.

Batuyev-Abdusamatov (Lvov 1951): 1.e4, e6 2.d4, d5 3.Nd2, dxe4 4.Nxe4, Nd7 5.Nf3, Ngf6 6.Nxf6ch, Nxf6 7.Bd3, Be7 8.00, 00 9.Qe2, b6 10.Bg5, Bb7 11.Rad1, Nd7 12.Bc1!, Re8 13.Ne5, Nxe5 14.dxe5, Qc8 15.Qg4, c5 16.Bh6, Bf8 17.Bg5, Qc6 18.Rfe1, Bc7 19.Be4, Qc7 20.Bxh7ch!, Kxh7 21.Bf6!, Bxf6 22.exf6, 1-0.

French Defence. The Rubinstein Variation 3...dxe4 gives White space advantage.

9...b6) Preferable is 9...c5.

11.Nd7?) Better 11...Qc8 followed by ...c5.

21...Bxf6) Or 21...gxf6 22.Rd3 and 23.Rh3 mate.

22.exf6) If 22...g6 23.qh4ch, Kg8 24.Qh6; or 22.. Rg8 23.Rd3.

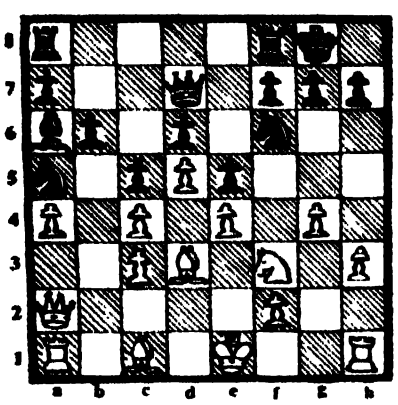
No 317 White to play



No 318 Black to play

The Weekly Pick

Rajasthan—The Painted Walls Of Shekhavati, Francis Wacziarg and Aman Nath, Vikas, Rs 250.

Exquisitely illustrated and extremely well-researched, this book contains a pictorial record of the grandeur and prosperity of a bygone era a tribute to Shekhavati, the seat of several of Rajasthan's Rajput eminences.

Though the book contains a comprehensive narration of Shekhavati's history, its rulers and their havelis, its major attraction and excellence lies in the superb photographic reproduction of the unique frescoes adorning almost all the houses of that region.

These frescoes—portraits, war scenes, religious ceremonies and floral designs—depict, far better than mere words, the history of its people right from the Mughal times.

From Mud House To Rashtrapati Bhawan, Sat Soni, ISSD Publication, Rs 90

A thinly-veiled psychophantic account of India's seventh President, Giani Zail Singh, from his early life ("birth in a mud house") to his foray into politics and subsequent entry into the Rashtrapati Bhawan.

The author writes, in boring detail, about the President's reading habits (only biographies of saints, warriors and kings), how he learnt English, his calm temperament in moments of stress, etc.

On the whole, the book fails deplorably in holding the reader's attention or interest in a personality whose life, luck and struggles are fascinating.

Viraha-Bhakti Friedhelm Hardy, Oxford University Press, Rs 250

An exhaustive study of the *Viraha-Bhakti* or Krishna worship cult, widely practised in South India. The author discusses the origins of the Krishna religion and the influences of Northern elements and traditions of Krishna myths.

The book brings forth an image of Krishna as depicted in the oldest Tamil sources. It also critically analyses the *Alvars*—twelve mystical poets of the second half of the first millenium A.D. with whom *Viraha-Bhakti* reached its culmination in the South.

Recommended only for students of Indian religion and culture.

Minnie

French Kiss

Sexy teen actress Brooke Shields has banned a handsome co-star from giving her French kisses. The 17-year-old starlet was furious when Frenchman Lambert Wilson gave her a hot-blooded kiss with his tongue on the set of her new film, *Sahara*, being shot in Israel. She stormed: "No one has ever kissed me that way before," and Wilson, 24, replied: "I don't feel comfortable any other way." Dozens of admirers have been chasing Brooke on the set, including Prince Talal of Jordan, the 17-year-old nephew of King Hussein.

—The Daily

Birthday Tribute

Liza Minnelli broke a long-standing rule by performing two Judy Garland standards in an eightieth birthday tribute to her father, director Vincente Minnelli. At a $ 1,000-a-plate benefit dinner show, Liza sang *The Boys Next Door* and the trolley song from *Meet Me At St Louis*— two pieces popularised by her mother. She formerly had refused to perform songs made famous by her mother. The tribute to Minnelli, whose 35 films won 21 Oscars, was attended by such celebrities as Frank Sinatra, Lucille Ball, Gregory Peck, Kirk Douglas, Eva Gabor and Louis Jourdan. Minnelli, whose career as a set and costume designer and director spanned a half century, turned 80 on February 28.

—International Herald Tribune

Finicky Meryl

So finicky is Meryl Streep about her profession that when it came time to dub the French soundtrack for her Polish-born character in *Sophie's Choice*, she just had to try to provide that *je ne sais quoi* herself. "I had to audition to show that I could speak the language well enough to play the role," says Streep, who refreshed her knowledge of French with courses and by listening to tapes of a Polish-born Frenchwoman. "It actually worked out very well. I found that to a French ear, an American accent sounds remarkably like a Polish one. So to the French, I sound just like a Polish woman trying to learn to speak their language."

—Time

Advantage Sri Lanka

Sri Lanka has come out the winner, having been selected as the venue for the major part of the shooting of Steven Spielberg's sequel to *Raiders of the Lost Ark*, *The Further Adventures of Indiana Jones*. The production company will shoot for a week each in India (a strong contender earlier) and Hong Kong, while the major part will be shot in Sri Lanka at the cost of $ 10 million.

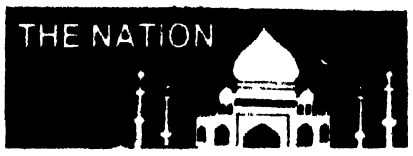
Jackie

The word is spreading



Midnight Marauders

Two young men and two girls had midnight fun in a lavishly furnished suite provided for the Prime Minister at Palam Airport during the Non-Aligned summit.

One of the two young men is believed to be the nephew of a Cabinet Minister. The others come from families of top officials. They are reported to have been employed by the protocol authorities to assist in receiving the guests and looking after them during the summit.

They asked for the keys to the suite from the attendant. Since they wore the official badge, the keys were made over to them. But the attendant later had his doubts and reported the matter to the airport authorities.

When the suite was opened, it was found that one of the costly mirrors fixed near the wash basin had been shattered. Even though they were guilty of vandalism, the matter is being hushed up in view of their high family background.

The suite and the VVIP lounge are exquisitely furnished at a cost of several lakhs of rupees. The bedroom has a four-poster bed with deep cushions and a massive full-length mirror. The lounge has antique furniture and its walls and ceiling are covered by thick raw silk.

—Free Press Journal

Vive le Indian Chillies

Guyanese President LFS Burnham returned home (from the Non-Aligned Summit) with 50 kgs of Indian chilli seeds, specially arranged for him by the public sector National Seeds Corporation (NSC). Burnham said green chillies were very popular in Guyana. Having learnt about Indian varieties, Pusa-Jwala and NP-42, one of the first things he did on his arrival for the summit was to instruct his High Commissioner to get the chilli seeds.

—UNI

Assam's Agony

Politicians of different hues and colours, vested interests of various kinds, even a section of the outside press are busy trying, overtly or covertly, to create alienation between sections of indigenous people. The intention is obvious: either crush the genuine demands of the people of Assam or at least derail their movement from its originally charted path—so that it could be branded "communal" or "secessionist".

—News Star, Gauhati.

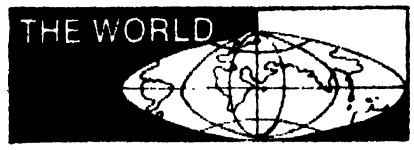
Towards High Places

Will Jayalalitha be inducted into the MGR cabinet on April 14, the Tamil New Year day?

Since her spectacular entry into politics during the AIADMK session in South Arcot nearly a year-and-a-half ago, Jayalalitha has slowly earned her way into the inner echelons of politics in Tamil Nadu, from a mere invitee to official functions to a member of the high-level committee on the Nutritious Meals Scheme, and now, as propaganda secretary of the party.

—Peter Snell in The Daily

Goldie



The Laureate Of Loss

In a country that hates above all things to lose, it's odd that its greatest playwright (after Eugene O'Neill) was the laureate of loss, a man who believed that "high station in life is earned by the gallantry with which appalling experiences are survived with grace." Tennessee Williams, who choked to death on a small bottle cap last week at 71, knew that the universal experience is loss. In his finest work he found an artist's gallantry,

a loser's lyricism that made "The Glass Menagerie" and "A Streetcar Named Desire" the most deeply affecting plays of our time, with plays like "Summer And Smoke", "The Rose Tattoo", "Cat On A Hot Tin Roof" and "Sweet Bird Of Youth" powerful if less perfect examples of that gallantry and grace.

—Jack Kroll

"This Is For You Guys"

Years ago, when Eamonn Coghlan said he'd break 3.50 in the indoor mile someday, even his hometown paper, Dublin's *Irish Independent*, scoffed, COGHLAN STILL DREAMING. But an Irishman's dreams occasionally come true: last week Coghlan, 30, broke the tape at 3:49.78 to set the world indoor mile record at New Jersey's Byrne Arena, on a track he had helped design (it has 10 laps to the mile, instead of the normal 11). Coghlan was boosted by his famous finishing kick, but he also felt especially determined that day. "All I could think of was my coach, Gerry Farnan, and my father," he said of the two inspiring figures in his life, both of whom recently died. "I was saying, hey, this is for you guys."

—Cathleen McGuigan

Spilling The Beans

The Queen's attitude to the publication of books by her former housekeeper-cook, Mrs McKee, might have been less benign had she realised that, McKee repeatedly broke her vow of silence from 1953 on. McKee's indiscretions fuelled the *Daily Sketch's* coverage of Princess Margaret's romance with Peter Townsend, and won promotion for the reporter she talked to, Olga Franklin. "I was introduced to her because my cousin was married to the Queen Mother's favourite Viennese chocolatier, Paul Gough," Franklin recalls. "She told me more than the paper would print though she was sometimes very nervous, and would close the doors and curtains, even on the sixth floor of a hotel in Stockholm, before telling what she knew.

Dyeing has never been so easy before

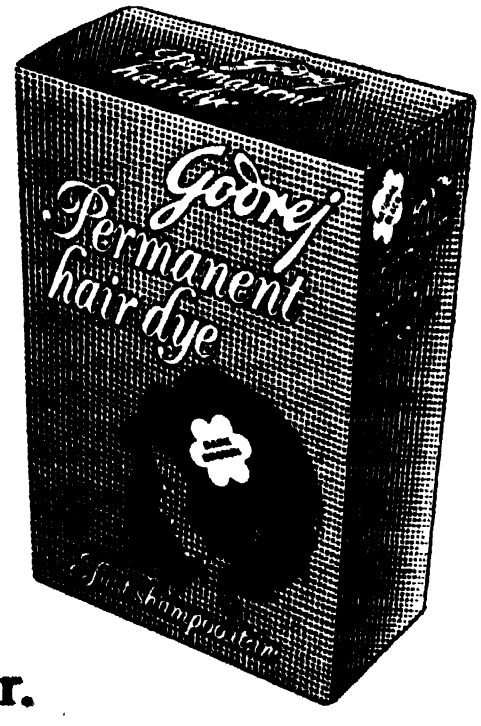
Godrej self-spreading hair dye makes dyeing so easy — because the colour spreads by itself as you apply it. No more laborious parting-and-painting, so no more mess.

Or as safe

Godrej hair dye is formulated to be gentle on your hair — to colour *it* softly, safely, without damaging the hair or staining the skin. It even has a gentle fragrance and also a special conditioner to add life and body to your hair.

Or as natural

Godrej hair dye comes in two rich, natural colours — black and dark brown; and it penetrates deep into the hair-shaft to leave your hair naturally dark, naturally beautiful.



Godrej self-spreading hair dye—

it makes dyeing as easy as washing your hair.

In millions of homes, good mornings begin like this.

With rich, strong Brooke Bond Red Label tea Red Label gives total satisfaction and great value for money. And the consistent quality, the purity and garden fresh taste only packaged teas can give. That's why more tea drinkers trust Red Label than any other tea Day after day, year after year.

Good tea. Good value. Any time.

Brooke Bond Red Label
India's largest selling packet leaf tea.

Make it easier for your baby to change from milk to solids...

Nestum: the baby cereal specially formulated for a gentle transition.

You want the very best for your baby. That's why you breast-feed him. The most nourishing and easily digestible feed you can give.

When he is about four months, he'll need solids in his diet. But his digestive system is still delicate. So he needs a cereal that's easy on his digestion. Like Nestum.

Nestum is so right as a first solid because of its special formulation. It's made from rice. And nutrition experts agree this is the easiest to digest amongst cereals as it's gluten-free.

Nutrition-conscious mothers like you say 'yes' to Nestum because it's fortified with 11 vitamins, iron and calcium—vital nutritional support for your baby. Vitamins to give a glow to his skin, a sparkle to his eyes and build baby's resistance to disease. Iron for healthy blood and calcium for strong bones and teeth.

Introducing solids in baby's diet is never a simple process. But Nestum can help you make the transition from milk to solids, gentle.

Easy to prepare:

Pour warm, pre-boiled milk | Add Nestum & mix | Heady to serve

Fortified with iron and 11 vitamins

Nestum® rice

LETTERS TO THE EDITOR

Burning Assam

Sir -- Sujata Anandan's article was balanced and informative ("Assam On Fire", March 13) The Assam problem is probably more economic than social Too many people are clamouring for the small, shrinking pie Hence the classic struggle for survival

The problem can be alleviated by speedy economic development But everybody should know and feel that they are Indians first and last! Unfortunately, we are bereft of leaders of stature who can knock this idea into our muddled heads

Animesh Kumar Rakshit
Bombay

Sir - "Assam Elections A Mockery Of Democracy" (February 27) by Sujata Anandan shows the real state of affairs in Assam However, in the last paragraph the writer suggests that if the AASU leaders had been wise enough to allow the Assamese to contest the elections, after gaining majority, they could have bargained with the Centre But she should not forget that the electoral rolls, in Assam are the real bones of contention, riddled as they are with the names of foreigners

D Raj Jain
Gauhati

Moon Magic

Sir Neil Armstrong and other astronauts may have stepped on the moon, but the charm and the beauty of the moonlight can only be enjoyed from the earth ("Moon Mysteries", March 6) Moonlight enchants the human mind One can get drunk on the ethereal elixir Poetic and romantic ideas evolve or rather erupt by moonlight Thus the moon has been denoted by the feminine gender, its delightful effects will remain till eternity (or, "as long as the triad of earth, sun and moon exist")

C L Shastri
Bhopal

Protean Eggheads

Sir -K K G Nambiar's lucid article "Intellectuals As Agents Of Change" (March 6) was timely

But why should the intellectuals look to the Government of "men in power"? Shouldn't it be the other way round?

R M Qureshi
Asht, (MP)

Sir - The author assumes that all academicians, journalists, writers, jurists and civil servants can be characterised as intellectuals This is incorrect We have to make a distinction between "knowledge workers" and "intellectuals" Most of the academicians, journalists and civil servants belong to the former class. They use their knowledge as a source of livelihood and this necessarily imposes constraints on their intellectual activity which prevents them from rising above their limitations to be truly intellectual A person, to be called intellectual, must have both integrity and independence and must be capable of looking at problems and analysing them in terms of their inherent character rather than in relation to some predetermined direction or preconceived sense of security That is why, while the number of knowledge workers has grown enormously, persons who could truly be called intellectuals are becoming extremely rare

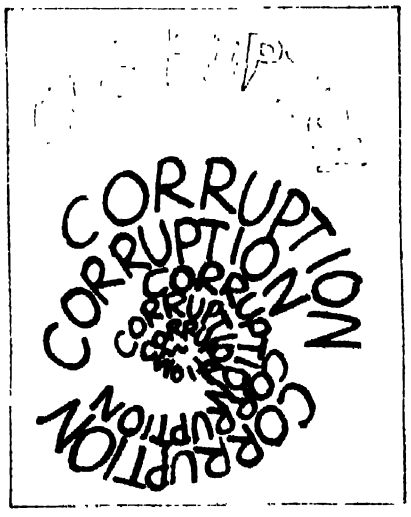
P R Dubhashi
Director
Indian Institute of Public Administration
New Delhi

Cesspools Of Corruption?

Sir Sheela Barse deserves to be congratulated for highlighting the racketeering in Bihar flourishing in the name of education ("Bihar Colleges Dens Of Corruption", March 6)

Needless to say, the educational institutions in the State have lately become happy hunting grounds for the opportunist, caste-conscious politicians The process of political "capital formation" goes on unhindered at the cost of education Consequently, the very institutions which were meant to develop modern, rational and egalitarian values among the students are perpetuating the traditional ills of the system

Alok Shrivastava
New Delhi



Sir -My wholehearted congratulations to Sheela Barse for her excellent article Not a single sentence is incorrect in her well-analysed and cogently written piece Her observations are hundred per cent correct

Although not a single university in Bihar is free from corruption, Patna University is the worst. Ironically, it was once a renowned centre of learning. Now it is a veritable fountainhead of corruption and malpractices

Gone are the days when the products of Patna University were called the cream of Bihar Casteism, favouritism, nepotism and goondaism, which are rampant on the campus, have made it the worst university in the State

Examinations in Bihar colleges are a farce Chits and books are freely used in examination halls. The examinees are not the only offenders Those who conduct the examinations, with only some exceptions, cooperate and connive at the obnoxious business

It is also no secret that if a teacher-politician with caste leanings heads a university department, the top position in the university examination is usually obtained by a student who belongs to his caste This rank nepotism and favouritism is at its worst at practical examinations in science subjects and at all examinations in medical colleges where the examiners enjoy greater freedom

The poor conscientious students who are victims of the system are helpless and can do little to retrieve the situation

They are frustrated and frustration breeds chaos

Nasal Nonsense

Sir -The report "No Laughing Matter. This?" in your "In The States" (February 28) columns is distorted

Vajreshwari Combines is not producing "Kranthiyogi Basaveshwara" Rajkumar declined the offer of the role because of a busy schedule He was not passed over (Two decades ago, he had made a great impact as "Jagajyothi Basaveshwara"!)

After Rajkumar turned down the offer, the producers' choice fell on Srinivasa Murthy and it is Srinivasa Murthy's snub nose that got him out of the role Then the producers chose Ashok.

A letter of apology was obtained from the reporter Mudaliar and photographer Shivayogi of *Sudha*, but it was for printing an old photograph of Rajkumar and not for writing about Rajkumar's nose (In fact no mention has been made about his nose)!

Firaq's Folly

Sir--P.D Tandon quotes Firaq ("With Contempt For Hindi And Happiness", February 27) thus: "If reborn, I would like to be a decent citizen " Thus on the poet's own admission there was something "indecent" about him And it is this "indecency" that was responsible for his irrational hatred of Hindi, his denunciation of professors, his estrangement from his innocent wife and, perhaps, his only son's suicide Of Hamlet, Polonius says, "Though this be madness, there is method in it " Of Firaq, it might be said: "Though this be method, there's madness in it!"

Kuttippuran

The Bohras

Sir - At the commencement of his article ("Dawoodi Bohras Struggle Against Authoritarianism", February 13) Mr Engineer enumerates certain instances of alleged violence practised by the followers of the Syedno against the so called breakaway group However, he fails to disclose that several years ago when violent clashes took place in Udaipur between them, the Police filed 115 prosecutions against Syedna's followers Of these, 94 cases have been cleared and, in all of them, the Syedna's followers were acquitted. The police also filed 135 prosecutions against the self-styled reformists Out of these, 7 have been disposed of in which there have been 18 convicted

In the same article, there is a picture of an old man Rajabali succumbing to his injuries. I do not know whether the author is referring to the case of Rajabali Choriasawala who was alleged to have been murdered by the Syedna's followers On an investigation of the matter, the Police authorities came to the conclusion that Rajabali had died a natural death and there was no question of murder.

The Peace-Loving Marwaris

Sir—The reference made to certain Marwari businessmen as instigators of communal riots in the twin cities of Hyderabad and Secunderabad ("Communalism The Widening Gulf" February 13) is blatantly false This community has roots in Andhra Pradesh that go back 200 to 250 years Most of its members are in business and have made a liberal contribution in the fields of education, medicine and religion They are also engaged in other promotional activities for the well-being of the State and society Crores of rupees have been invested by philanthropic Marwaris for benevolent causes where the public at large, irrespective of caste and religion, can avail themselves of the services Wherever possible, our institutions have made arrangements to provide relief, either in cash or kind, to the not affected regardless of caste or creed

It would not be out place to mention that in the disturbed conditions, business does not prosper and, therefore, by nature this community cannot be a party to infusion of communal hatred, much less to the instigation of communal riots Indeed, the peace-loving Marwaris, spread all over Hyderabad and Secunderabad, are religious minded and generally afraid of such acts None of them have been or is likely to be a party to inflaming communal passions

Your Affairs: The World Communications Year 1983.

The United Nations General Assembly has proclaimed 1983 as the World Communications Year The Central Government has appointed S K Ghose, Secretary, Union Ministry of Communications, as the chairman of the National Co-ordination Committee to achieve the objectives laid for the World Communications Year The projects include augmentation of telecommunication facilities in rural areas, strengthening of timely warning, projects for the accelerated growth of traffic in international circuits, data communication, use of international maritime satellite in maritime mobile communication and improvement of existing telephone facilities in metropolitan cities These are laudable goals in an underdeveloped country like India Of these, the last: shake up and improvement of telephone facilities in Indian cities deserve immediate attention The telephone system in Indian cities, including New Delhi is in a shambles Same is the case with our postal system Now letters and postal articles move from one place to another at a snail's pace, particularly in Kerala. Instead of aiming at the sky and the satellite Communications, let the authorities look down a the ground for the time being and put our postal and Telephone system in proper shape.

COVER STORY: *Up In Arms?*

The Weekly devotes a special issue to the land of colourful warriors, Sikh and Hindu, the problems that beset it, the State's unique role in the service of the nation and the rich promise it holds for the future. The articles:

8 ***Punjab's Case Is Just.*** K.C. Khanna argues that, despite the "emotional" support mobilised by the Akalis, secularisation of politics has been proceeding faster in Punjab than anywhere else in the country

10 ***Punjab. No Time To Lose.*** Surjit Singh Barnala, as a leading member of the Akali team conducting parleys with the Centre over the Punjab issue, spells out the stepmotherly treatment accorded to the State

11 ***Towards A Sikh Revolution.*** The "Sikh Nation" theory has now crossed the point of no return, says Ganga Singh Dhillon

12 ***What Bhindranwale Stands For.*** Gurtej Singh analyses the prevalent psychological climate in Punjab that supports the "Bhindranwale Phenomenon"

13 ***Akali Agitation And The Services.*** The recruitment by "quotas" based on population is working to the detriment of the Sikhs, says Maj Gen Jaswant Singh Bhullar

14 ***Sikh Fears Are Groundless.*** The Centre's dithering has confused and immobilised the Akalis, says K R Malkani

15 ***Punjab In The Service Of The Nation.*** An assessment by Darshan Singh Maini

18 ***Darbara Singh Speaks Out.*** The Punjab Chief Minister on the State's problems-in an exclusive interview

19 ***Punjabiat In Peril.*** Punjabis are not behaving like Punjabis, says Dr V N Tewari.

20 ***River Waters. Their Life-Blood.*** Gurdev Singh demands an urgent solution to the problem

21 ***The Artisan Of Gods.*** Amrita Pritam talks to the father of Chandigarh's fabulous Rock Garden, Nek Chand

22 ***Those Exquisite Handicrafts*** Balvinder pl. ads for a respectable home market for Punjab's handicrafts.

23 ***In The Field Of Contemporary Indian Art.*** S.S Bhatti evaluates the State's contribution.

27 ***The Bedi Effect.*** Raju Bharatan on Bishan Singh Bedi's doubling as National Selector and TV Commentator

32 ***Gidda: Merry Maids Dance.*** Brahm Dev captures the colourful dance of Punjabi belles

24 **ART:** ***Pichchavais: A Growing Market In The West.*** Praveen Gupta on the backdrops from Nathdwara that are stealing the limelight.

25 **NATURE:** ***Corals: Gems From The Sea.*** Shyamala Mahadevan writes on their great economic potential

34 **RELIGION:** ***Godmen Are Frauds.*** Vasant Sathe, Union Minister for Fertilisers and Chemicals separates the true seers from the spurious ones.

36 **PHOTOGRAPHY:** ***A Beautiful Language.*** A selection of pictures by Dr M. Kanitkar.

49 **FICTION:** ***Walls.*** Story by Keki Daruwalla

Plus: Quiz Mountain 29, In The States 30, The World Around Us 39, Health 42, That's Business 43; HA 46; Stars 53, Comics 55, Bridge & Chess 59, Weekly Pick 61

Whither Punjab?

K.C. Khanna argues that, while at the moment the Akalis may have been able to cash in on the emotional upsurge of the Sikhs and the sympathy of the Punjabi Hindus for the cause they are espousing, the truth is that the secularisation of politics has been proceeding faster in Punjab than anywhere else in the country. Punjabi ethos, he says, is essentially preoccupied with production and consumption, not distribution. It is on this aspect of Punjab the *Weekly* seeks to focus in the following pages—on the State's political problems in the broad context of its culture, character and role in national life.

WILL there be a bloodbath in Punjab? Will the State go the way of Assam? The short answer to these questions is a qualified No. Sant Jarail Singh Bhindranwale and his armed followers have the potential for mischief—for looting Hindu property and sneak killing of individuals on their hit list. But, as of now, they do not have the popular support needed to touch off the kind of massacres that erupted in the wake of India's partition or just before and after the first round of elections in Assam in February.

The reasons are evident in the dim, dark and smelly bazars of Amritsar. Hindus crowd Sikh shops and vice versa without a trace of self-consciousness, let alone animosity. The Sikh scooter driver or rickshaw-puller is as polite to elderly Hindu ladies as he is to those of his own faith. None is afraid to go out at night—all alone.

No wonder in the sprawling, colonial-style bungalow of the Deputy Commissioner, the tenant, Sardar Singh, and Senior Superintendent of Police Bains exude confidence. Both very fine officers, they talk modestly of how they were able to keep things under control when the severed head of a cow was found in a temple and cigarette-stubs inside a gurdwara. "The police force is solid," says Bains, "it will never split on communal lines."

To drive home the point, he cites an incident: only a few days earlier, a Hindu police officer on a visit to Amritsar (allegedly given to corruption and extortion in his home district) was waylaid and killed by *goondas*. There were more Sikhs than Hindu police officers at his cremation.

The arrest and release daily of hundreds of Sikh satyagrahis, engaged in *Dharam Yudh* against the Centre, is thus a pretty friendly affair. Usually, they march around dusk, with due ceremony, from the Golden Temple to the city kotwali, less than a couple of kilometres away, squat for hours in a huge makeshift compound and are allowed to be fed by Akali volunteers even as lists are drawn up of those "under arrest". It is around midnight that they are dispersed in officially hired trucks to jails far away. According to the unwritten rules of the game, none offers himself for arrest twice and no one is detained too long.

The figure of 90,000 Akalis, who have defied the prohibitory orders so far, must be assessed in this context. It is a cause more for hope than fear. Peace is the watchword of Sant Harchand Singh Longowal, President of the Shiromani Akali Dal and "dictator" of the *Morcha*, till now, he has been able effectively to have his way. The *Morcha* can continue for years and the Centre need not worry.

But, as things are, worry it must. For even the highly respected Sant Longowal has failed to curb violence in speech. The farewell to the Jathas every evening is preceded by the filthiest imaginable invectives against the Centre, blared over loudspeakers to a large assembly of the faithful. Nor can the Sant prevent occasional shootouts between the police and the "extremists" or, for that matter, sporadic incidents of looting, killing or bomb-throwing. Hindu devotees used to outnumber Sikhs in the Golden Temple: today they are scared. Sant Bhindranwale's armed followers seem to have taken over the Temple's sprawling compound, posing a threat to Sant Longowal himself. (Recently, Sant Longowal is said to have talked of an impending armed attack by the police on the Temple and used it as an excuse to bring some of his own followers with licensed arms into the Teja Singh Samundri Hall for personal protection, just in case Sant Bhindranwale's men take it into their head to act funny.)

Be that as it may, the differences between the two Sants are sharp and cannot be entirely hidden by Sant Longowal's ritual claim that there are none. True, both are learned men, well versed in the scriptures and the Sikh lore. Both swear by the cosmopolitanism of the great Gurus. But one pointedly emphasises their kinship with good Hindus, the other with good Muslims. Both denounce secessionism but their response

to a hypothetical query about the Akali attitude in the event of an attack by Pakistan is divergent. "We will forget our quarrels with the Centre and fight," says Sant Longowal. "We will see," equivocates the other Sant and adds "Slaves cannot fight!"

Both say that the Akalis are not against the Hindus and that they are fighting for the rights of all Punjabis, including the Hindus. But, in the same breath, Sant Bhindranwale quotes chapter and verse to show how the Sikhs have been the victims of Hindu *zoolum*. "Our patience is nearly exhausted and our struggle may not be peaceful. the Gurus exhorted us to take up arms against injustice. That is why we worship weapons."

Specifically, Sant Bhindranwale does not rule out a general massacre in the villages where the Sikhs outnumber the Hindus or vice versa if the "Centre fails to see light." Sant Longowal does. "We cannot possibly kill each other. Our relations are bonded by bread and bride. *Sada Roti Beti Da Sak Hai*."

The differing stance of the two Sants shows how various strands of Sikh society today are woven together into a complex web of competing and com-

The differences between the two Sants, Bhindranwale and Longowal, are sharp and cannot be entirely hidden by Sant Longowal's ritual claim that there are none. Both are learned men, well versed in the scriptures and the Sikh lore. Both swear by the cosmopolitanism of the great Gurus. But one pointedly emphasises their kinship with good Hindus, the other with good Muslims.

plementary interests. Sant Longowal, the moderate, articulates the views and aspirations, by and large, of the prosperous Sikhs, including urban professionals, predominantly Khatri by caste. They are educated and virile and want all hurdles in the way of their rising standard of living demolished. But they do not want to rock the boat too violently. Sant Bhindranwale, the extremist, has fired the imagination of many rural Sikhs, particularly the poor and the landless, who flock to his banner if they are not swayed by the CPM's radical philosophy.

But the polarisation is by no means complete. The rich landed Jat has become urbanised while almost every affluent Khatri businessman or professional has acquired a stake in land. Politically, in the contentious arena of Akali institutions, conflicts are subsumed by interdependence: one group is needed for respectability, the other for muscle power. By the same token, each to some extent is hostage to the other.

The Hindu response to the show of Akali militancy has been predictable. A small number, particularly among the youth, has veered to the RSS in the belief that force must be met with force. At the same time, paradoxically, the BJP's base in Punjab has been badly eroded. The vast majority of the Hindus have swung to the Congress (I), for they think that the Centre alone can now protect the community's true interests. This has plunged the BJP into total confusion. Since it is extending an olive branch to the Muslims and other minorities, its top leadership in New Delhi cannot openly welcome, much less aid, the strengthening of the RSS in Punjab. Mindful of its interests in Haryana, it cannot even support Punjab's case for more water or transfer of Chandigarh. But its State Unit has been compelled to do so for sheer survival. The party as a whole willy nilly thus presents the sorry spectacle of a house divided against itself.

More to the point, New Delhi is dithering. The Congress (I)'s High Command has assumed that the Akalis will not call off their movement unless they are installed in power in Chandigarh, that it is impossible to persuade its own State Unit to commit suicide—specially now that it is stronger than ever—and that, short of this, the satisfying of one Akali demand will lead to another in unending progression. Its policy is also dictated by the conviction that, in Akali counsels, Sant Bhindranwale calls the shots and that the only way to contain his armed might is to see to it that he gets no help from Pakistan. In a word, fear predominates.

This is a great pity. For this fear can become self fulfilling if principles are jettisoned and crass expediency takes over. In this issue of the *Weekly*, we have focused on Punjab's political problems in the broad context of its culture, character and role in national life. We do not mean to suppress any viewpoint. Two points emerge clearly from the articles that follow and these must be firmly grasped before the situation deteriorates further.

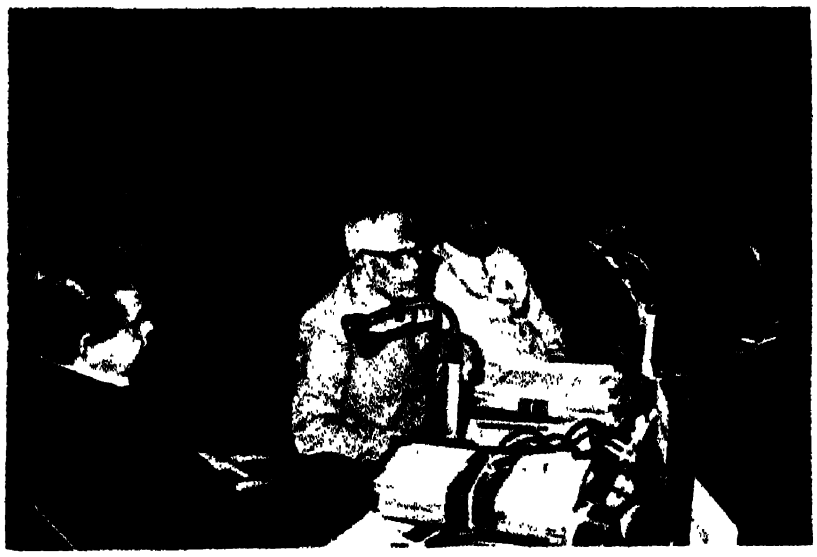
Firstly, the Akali demands for referring the river waters dispute to the Supreme Court as also for transfer of Chandigarh to Punjab are just and rational; they can and must be conceded on merit. Though Punjab has the exclusive use of Sutlej waters, harnessed by the Bhakra Nangal system, they no longer suffice. To apportion the bulk of the Ravi-Beas waters to Haryana and Rajasthan, which are neither riparian States nor wholly fall within the basin of the two rivers, is manifestly unfair. Modalities of reference to the Supreme Court, in keeping with the country's international commitments and overall interest, can be easily worked out. Similarly, the Chandigarh issue can be sorted out once it is recognised that the boundaries of Punjab and Haryana would be "adjusted" and Haryana will receive a Central grant, as its parent State once did, to build a new capital.

Secondly, these two demands are not of the Akalis alone but of all Punjabis. They must be met not only because Punjabis have right on their side but also to ensure the economic, social, cultural and spiritual well-being of a vigorous people.

At the moment, the Akalis have been able to cash in on the emotional upsurge of the Sikhs and the sympathy of the Punjabi Hindus for the cause they are espousing. Therefore, they loom larger than life on the political scene. It is not realised that the secularisation of politics has been proceeding faster in Punjab than perhaps anywhere else in the country. The increasing fragmentation of Akali politics and the disarray in the BJP ranks bear witness to the trend. Attempts by the Congress (I) to take short-term advantage of such fractures will only put the clock back. But, if the Centre takes a wider view, religion and caste will yield precedence to politics in Punjab sooner than in any other State.

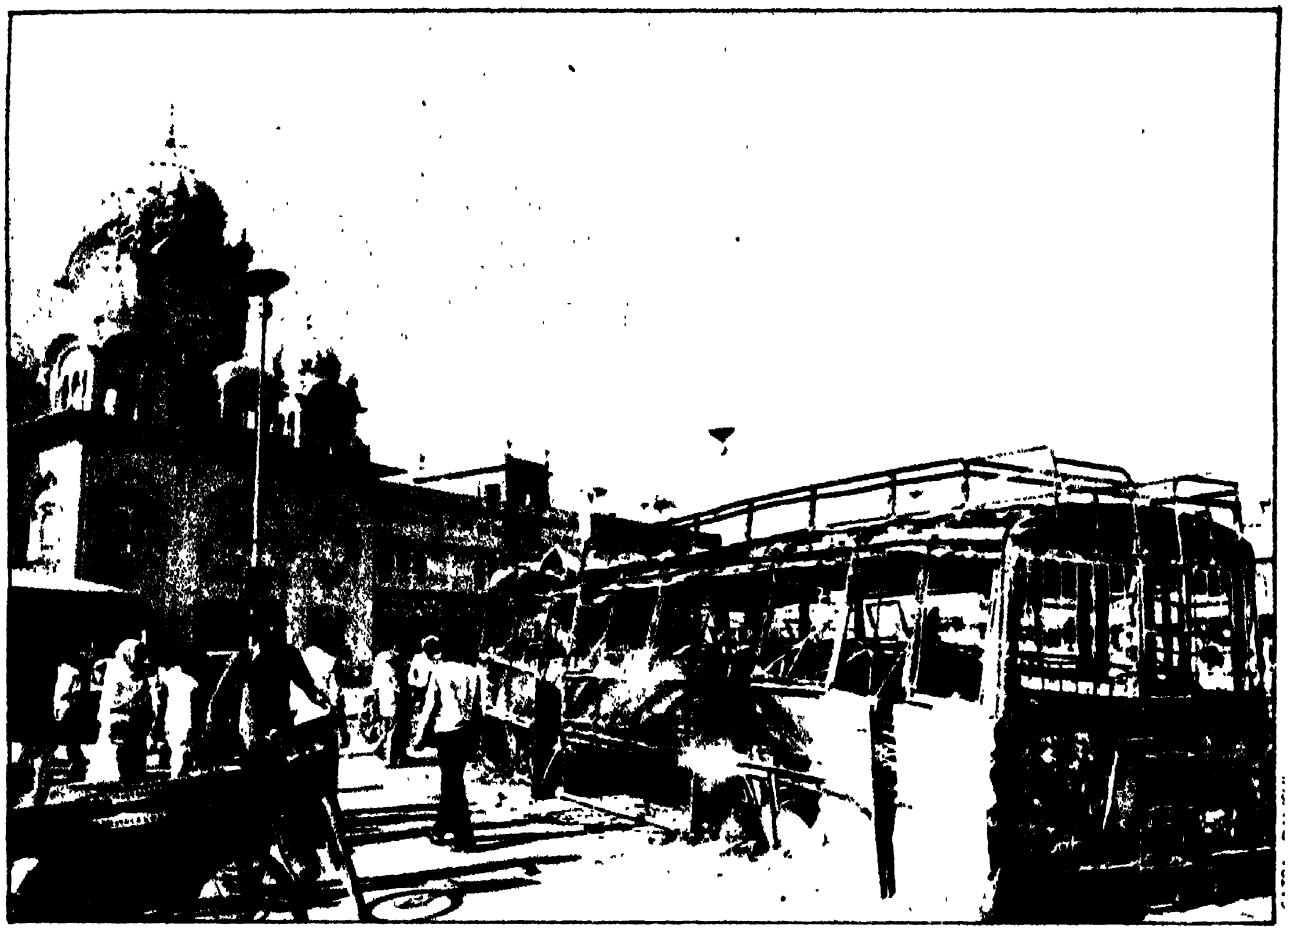
Punjabi ethos is essentially preoccupied with production and consumption, not distribution. Given half a chance, Punjabis, at this stage in their history, have the wherewithal quickly to come into their own. ■

AT THE TRIPARTITE TALKS ON PUNJAB are seen (in the picture at left) members of the Cabinet Committee: Home Minister P C Sethi, Defence Minister R Venkataraman and Sports Minister Buta Singh, while in the picture at right are seen Akali delegates Balwant Singh, Ravi Inder Singh and Surjit Singh Barnala. The Congress(I)'s High Command has evidently assumed that the Akalis will not call off their movement unless they are installed in power in Chandigarh. Its fear is that meeting one Akali demand will only lead to another—in an unending progression.



Punjab: No Time To Lose

Surjit Singh Barnala, as a leading member of the Akali team conducting parleys with the Centre over the Punjab issue, spells out the step-motherly treatment accorded to the State and pleads for a more humane approach on the part of the authorities.



WHAT REMAINS of a Punjab Roadways bus outside the Golden Temple on October 10, 1982. The author feels that time is running out and the Centre would do well to ponder the Punjab problem in its totality before it is too late.

SINCE Independence, Punjab has been discriminated against by the Union Government in the economic, social and political spheres and the Sikhs, who constitute a majority of the State's population, had to launch struggles, time and again, for redressal of their grievances. Unfortunately, instead of solving them, the problems were allowed to multiply and, by interference in their religion and by systematic persecution or harassment, a grave situation was created in the State, so much so that the Sikhs were left with no option but to launch another peaceful agitation. On August 4, therefore, the Shiromani Akali Dal, the only representative party of the Sikhs, started the *Morcha* (agitation) and, up to the end of February 1983, about 82,000 volunteers had gone to jail and 132 had lost their lives.

It may sound strange to some readers that a State, which provides about 65 per cent of the foodgrains to the Central pool and which has been termed as the Sword Arm of India and has the highest per-capita income, should have to fight a long-drawn struggle for achieving even the legitimate rights of its people. This article, then, aims at providing some idea of the stepmotherly treatment accorded to Punjab and to the Sikhs in Free India.

During the struggle for independence, the Sikhs were in the forefront of the movement. Though their number at that time was only about 1½ per cent of the total population of India, 80 per cent of the martyrs who went to the gallows and 75 per cent of those who were exiled during the freedom movement came from this community. On the eve of independence, the Congress leaders (like Mahatma Gandhi and Jawaharlal Nehru) gave solemn assurances to the Sikhs that, as a national minority, their rights would be fully protected. Nehru said in July 1946, when the All India Congress Committee met at Calcutta:

> *The brave Sikhs of Punjab are entitled to special consideration. I see nothing wrong in an area and a set-up in the North wherein the Sikhs can also experience the glow of freedom.*

The Sikhs were assured that, if India achieved political freedom, no constitution would be framed unless it was freely acceptable to them. However, when in 1950 the present Constitution was enacted, the basic concept of federalism was totally diluted. The States were left with very little powers and no special safeguards were provided for the minorities, like the Sikhs. The accredited representatives of the Sikhs—the Shiromani Akali Dal—expressed in the Constituent Assembly their inability to accept the Constitution.

The two representatives of the Akali Dal, in fact, declined to append their signatures to it. Later, when the Sikhs represented their grievance, Nehru had only this to say cryptically: *The times have changed!*

When in 1950 the present Constitution was enacted, the basic concept of federalism was totally diluted. The States were left with very little powers and no special safeguards were provided for the minorities, like the Sikhs.

After Independence, the States were reorganised on the basis of language. But the Punjabi language was ignored and the Sikhs had to wage a relentless struggle for 15 long years to attain their just demand for a linguistic State. The Central Government ultimately agreed to form a State on the basis of the Punjabi language, but mischievously kept large Punjabi-speaking areas and Chandigarh out of it. Thus Punjab lost its capital thrice—first Lahore, then Simla and later Chandigarh. Chandigarh was planned as the capital of Punjab to compensate for the loss of Lahore and a large number of people, who had migrated from West Punjab at the time of Partition, had come and settled there. The villages, which were uprooted for building the city, were all a part of the Punjabi-speaking Tehsil Kharar. The only tongue spoken in these villages was Punjabi.

It is not surprising that we demand the immediate and unconditional return of Chandigarh to the parent State of Punjab. As for the other Punjabi-speaking areas left out, a commission should be set up to settle the claim on the basis of language and contiguity, treating the village as a unit.

Partition reduced the Land of Five Rivers to a Land of Three. The rivers Satluj, Bias and Ravi are Punjab's rivers and, according to the national and international laws and conventions in this regard, Punjab, being a riparian State, alone has the claim to these waters. But, unfortunately, only about one-third of the total water of these rivers has been given to Punjab; the rest has been diverted to the far-off non-riparian and non-basin areas of Rajasthan and Haryana.

No other State in India has had its river waters taken out of the natural basin without first meeting all its requirements.

The ultimate result of such an unjustifiable distribution of water will be that the blooming fields of Punjab will, in due course, be converted into parched lands. This is being facilitated to ruin the agrarian economy of Punjab and to turn the Bread Basket of India into a begging-bowl.

The Punjabis in general and the Sikhs in particular can never allow such a thing to happen. We want a judicial review of the allocations of water so that justice is done to the State. We see no reason why the legal aspect of the problem should be deliberately played down and bypassed.

India is a vast country and, envisaging its unity in diversity, a federal constitution was to be provided. However, the constitution which was ultimately framed was more unitary than federal. State Governments were denuded of more powers gradually by amending the Constitution from time to time and by the creation of bodies like the Planning Commission and the University Grants Commission. What is more, the Centre acquired the right to dismiss elected State Governments at will, thus negating the principles of democratic federalism.

As we know, on several occasions, this provision was resorted to in Punjab and elsewhere with a view to securing political leverage for the Ruling Party at the Centre. Indeed, for every small matter, the State Governments have to depend on the Centre for advice and guidance: they have virtually been reduced to the level of municipal committees. Such an erosion of the authority and the duties of the State Governments cannot but cause disquiet and lead to a state of distrust and disharmony.

We want that the Constitution be made truly federal in the light of the Anandpur Sahib Resolution framed by the Akali Dal in 1973. This Policy Statement envisages the retention of only four subjects—Defence, Foreign Affairs, Communications and Currency—by the Centre, leaving the rest to the States.

There is a long-standing demand of the Sikhs to bring all the historic Sikh shrines in the country under one system of management so that uniform religious practices are followed in all the religious places of the Sikhs. The previous Central Government (the Janata) had agreed to pass this legislation and, in fact, a draft of the Bill had been prepared by a committee appointed by the Punjab Government headed by a retired

Chief Justice. The proposed draft is still lying with the present Central Government, which seems to be in no hurry to consider it

Finally, so far as the present agitation is concerned, it behoves the authorities to keep the human angle in view. By arresting a large number of innocent Sikhs on trumped-up and specious charges, they cannot hope to get away with it Nor can we countenance the so-called police encounters in which scores of our young men have been killed under one pretext or another. The whole world knows by now the rationale and the modalities of such fake encounters.

The Government's information media and a section of the press, dominated by certain communal or sectarian anti-Sikh interests, have indulged in systematic propaganda, dubbing the Sikhs as secessionists and extremists This is, to put it mildly, a travesty of the facts. The Sikhs remain as patriotic and as firm as in the past. Their entire history is a saga of sacrifice for the country. However, to fight for one's rightful place and prerogatives is not to do injury to the federal structure of the country. Indeed, this may, in the long run, be the only means to preserve it.

I have spelt out briefly some of the problems agitating the Punjabi and Sikh minds. We have made no extravagant or fanciful claims Our demands rest upon legalities and truths and rights. We have also shown great patience and forbearance all these years; and all through our negotiations with the Centre. However, time now seems to be running out and the Centre would do well to ponder the problem in its totality before it is too late.

Punjab is a sensitive border State and the problem brooks no further delay. Should a catastrophe overtake the State, the responsibility would rest entirely with the Central Government.

I fervently hope and pray that such a situation will not arise and that the Prime Minister will, in the larger interests of the country, rise to the occasion ■

Towards A Sikh Revolution

Ganga Singh Dhillon points out that the Sikhs in the Akali Dal leadership have shown remarkable restraint and patience but that the Sikh Nation theory has now crossed the point of no return.

AFTER 35 years of striving to establish their own identity within the Indian Union, the Sikhs have now run out of patience. The Government's tactics of luring Sikh leaders into endless rounds of talks that only leave them empty-handed will work no more The Sikhs now demand action

How will the Government respond? The real question in many Sikh minds is whether Prime Minister Indira Gandhi will be able to come to grips with the changing political realities in India. The Prime Minister increasingly appears unsure of what to do. Not long ago, her Government responded to Sikh protests by arresting thousands of Sikhs and jailing them—and then ordering their release Such conflicting actions suggest that the Prime Minister is being ill advised.

If there could be any reason for the intensity of the Sikh demand for autonomy, it is the failure of the Government to respond to Sikh needs Everyone knows that Sikhs fought in the forefront for India's independence from Britain, and again fought in three wars to maintain India's territorial integrity. No one doubts today that the Sikhs are gearing themselves for what, in the words of Sant Harchand Singh Longowal, could become open "revolt". No people—especially not the Sikhs who are noted for their loyalty and patriotism—would ever contemplate such action without good reason. And the reason is the violation of Sikh religious, economic and political rights

The concept of a Sikh nation was first mooted at the All India Sikh Educational Conference in Chandigarh on March 14, 1981. It was endorsed by the Shiromani Gurdwara Prabandhak Committee, the highest elected Sikh religious body, and the Akali Dal, the political organ for Sikh aspirations, at Amritsar on March 29, 1981.

No self-respecting Sikh could take so much victimisation lying down One form of retaliation was the large-scale recruitment of Sikh ex-Servicemen. Even after this, the Government has given no indication that it recognises the seriousness of the Sikh struggle for existence

In my view, Sikhs are loyal by nature and historically patriotic. But, like all peoples in democratic societies, Sikhs have their own identity and their own aspirations. If the Government does not accommodate Sikh needs and aspirations—and the aspirations of other minorities as well—the results could be disastrous for the territorial integrity of India and a potential tragedy for humankind

Because of its geographical location in the north-west of India, the Sikh homeland—Punjab—engages the conflicting interests, not only of India and Pakistan, but also of nearby Afghanistan, the Soviet Union and China Any outbreak of violence in Punjab, let alone a full-scale revolution—something that cannot now be ruled out as a possibility—could draw Russia, China and America—as well as India and Pakistan—into the conflict.

Even without intervention from outside, disturbances in Punjab would be a disaster for India Sikhs are the best farmers in India—in fact, they number among the best farmers in the world. Being less than 2 per cent of the population of India, they produce nearly 40 per cent of India's wheat and 48 per cent of India's rice. Any outbreak of violence in the area would result in the decrease of food supply to the rest of the country.

Sikhs, however, do not desire such an outcome Sant Harchand Singh Longowal (President of the Akali Dal) and Sant Jarnail Singh Bhindranwale are distinguished leaders of the "Sikh Nation" They do not need any defence that I might put up for them But, strongly as they advocate autonomy, I am certain that they are not anti-India They understand—as every Sikh does—that India is a diverse country—diverse in language, in custom, in heritage, in culture That is, India is too diverse to ever become a homogenised state where everyone thinks and talks and acts alike. To fulfil its full potential, therefore, India must move away from the idea that it is no more than a large village commune, run by a personal government, and move towards its future destiny as a nation of nations The issue, in other words, is diversity in unity.

Why is it that, whenever the Sikhs have asserted their distinct cultural identity and demanded autonomy for their homeland, reactionary forces have cried "Partition!" When the Sikhs demanded the same status for Punjabi in Punjab that Bengali enjoys in Bengal, the Hindu communal majority shouted: "Separatism!" When the Punjabis asked for control of Chandigarh, the capital, the river waters and the hydro-electric projects of Punjab, they were shouted down as "extremists". When recruitment and promotion in the Armed Forces was demanded on the basis of merit, the Sikhs were labelled as "anti-national". In Hardwar, animal slaughter is prohibited by law but, when Sikhs demanded prohibition of tobacco in Amritsar, the demand was called "fanatic". The Hindus obviously do not want to accept the Sikhs within a Hindu society. The only solution, then, is to accord the Sikhs autonomy within their own homeland, as was accorded to Jammu and Kashmir under Article 370.

The general belief that Sikhism is a sect of Hinduism is a myth spread by Hindus in a vain attempt to undermine Sikhism and ultimately absorb Sikhs within the fold. This is what fuels the Sikh determination to risk all—if necessary —for the right to survive and grow as a distinct community For Sikhism is not a sect of Hinduism Indeed, Sikhism is very akin to Judaism in its worship of one God, its dedication to education and its commitment to human equality.

The challenges to the Centre are those of adjusting to the rapidly changing needs and demands, not only of Sikhs, but of all other minorities in India. What Prime Minister Indira Gandhi and her advisers need to realise is that the India of 1983 is not the India of Mohandas Karamchand Gandhi; nor even the India of Jawaharlal Nehru. The problems India faces and the needs to which the Government must respond have changed with the years. This takes none of the lustre away from Gandhi or Nehru, but the changes demand an objective review of the real needs of the diverse peoples of India in the 1980s

There is no reason why those people who hold a different view from the majority and the current political leadership should be charged with treason. The Akali Dal leadership and I have said repeatedly that we do not want to dismember India In fact, the people must grow closer together, for the increasing complexity of modern life and the pervasiveness of high technology and communications make for greater interdependence

The Hindus obviously do not want to accept the Sikhs within a Hindu society. The only solution, therefore, is to accord the Sikhs autonomy within their own homeland, as was accorded to Jammu and Kashmir under Article 370.

A modern government must recognise and accommodate the aspirations of all the people and encourage them to strive for the good of all because, by so doing, they better serve their own interests. The recent elections in Andhra Pradesh, Karnataka and Assam are signs that time is running out for the Government

The Sikhs under the Akali Dal leadership have shown remarkable restraint and patience However, the Sikh Nation theory seems to have crossed the point of no return. The issues concerning the Sikh Nation's future and destiny have been discussed for long at the State, National and International levels and patience has worn thin. Any further effort to start another dialogue would be looked upon as no more than a trap. Evasion will neither promote communal harmony nor territorial integrity. Indeed, it could hurt both. It will not postpone the day of reckoning for long. It will only reduce, if not completely destroy, the chances of an amicable, peaceful settlement of the problem.

Sikhs are increasingly turning to religious teachings. The words of Sahib Guru Gobind Singh, the Father of the Sikh Nation, are echoed among the Sikhs more often these days.

Blessed are those who keep God in their hearts and swords in their hands to fight for a noble cause.. when there is no course open to man, it is but righteous to unsheath the sword.

Will a "Sikh Revolution", then, in the Sikh homeland, Punjab, engulf the entire region? ■

—KARAM SINGH Courtesy, The Tribune Chandigarh

CHOWK MEHTA IN AMRITSAR presented this picture following Sant Bhindranwale's arrest last year Bhindranwale is seen in the inset picture with Sant Longowal—the two key figures in the Punjab drama Bhindranwale's being armed, says the author, is in the best traditions of the ancient Aryans for whom weapons were an appropriate expression of manliness.

What Bhindranwale Stands For

Gurtej Singh, as a youthful IAS officer who resigned his job to throw in his lot with Bhindranwale, argues that a separate identity is the basic creed of Sikhism. Repeated attempts, he says, have been made to humble Sikh pride: they have been systematically deprived, economically and politically.

THANKS primarily to the media's quest for sensationalism, the name of Sant Jarnail Singh Bhindranwale (36) has become synonymous with violence, law-breaking and secessionist activities The Sant's armed escort is deemed to be sufficient proof of his blood-thirsty nature No political ideology is too radical to be attributed to him. Even his stay in a resthouse attached to the Golden Temple, necessitated by his position of a "co-dictator" of the Akali Morcha, created many misunderstandings

True to his name, Jarnail (an adaptation of *General*), the tall, thin Sant with piercing eyes, is a born leader. After barely five years of semi-political activity, he has emerged as an international figure. Besides being acknowledged as a spiritually developed personality, he is also the head of an institution universally respected by the Sikhs.

The Sant is a truthful, logical and precise man. He is not known to have ever denied or revised a public statement. All his discourses are recorded and filmed, but for none of them has he ever been called upon to answer the charges of unlawful activity, secession or even of inciting violence.

His being armed is in the best traditions of the ancient Aryans, for whom weapons were an appropriate expression of manliness and the determination to resist an assault on their dignity and self-respect. The Sant is consciously following the traditions set by Guru Gobind Singh, who regarded weapons to be the hallmark of a free man and worshipped them as visible manifestations of Supreme Power. None of his immediate followers is known to have ever used arms, although it is certain that they are not averse to using them when the situation demands it.

Familiarity with the prevailing psychological climate in the Punjab is necessary for a proper assessment of the Bhindranwale phenomenon. It was adequately summed up at the Seventh All-India Akali Conference in 1966 which, "after having carefully viewed the entire situation, came "to the inescapable conclusion that a section of political Hindus, holding key powers in political India, have a firm plan of degrading and liquidating the Sikhs from the mainstream of Free India. ." It will be remembered that, for the preservation of his infant ideology, the 10th Guru had to battle more often against the Hindu Rajas than the Mughals.

Lakhpat, a Hindu diwan of the 18th-century satrap of Lahore, however, remains the only Government official to have ever taken a public vow to exterminate the Sikhs. He ordered a general massacre of Sikhs and proscribed their scriptures. The Sikhs discerned the basic elements of this policy in the activities of the Aryasamajis, leading to *en-masse* denial of Punjabi as their mother tongue by Punjabi Hindus in the Census Reports of 1951 and 1961 Being motivated and even aided by men like Charan Singh (now of the Lok Dal), this vocal section has been in the forefront in denying the Sikhs their separate identity. Indeed, they gird up their loins to oppose any attempt at even a marginal political or economic betterment of the Sikhs

A separate identity is the basic creed of Sikhism. The Gurus have held Sikhism to be a sovereign dispensation, the basic teachings of which are grounded in direct inspiration from God. Sikh Gurus repudiated the authority of Aryans as well as the Semitic scriptures; gave up Hindu gods; renounced the caste system; and denounced ritualism. An oft-repeated assertion, that Sikhs are no more than Hindus, is a major irritant. The Bhindranwale Taksaal (a mint for forging an authentic religious psyche) legitimately refuses to accept the grave erosion of the true status of Sikhism.

This is the root cause of clashes between Bhindranwale and the heretical sect of Nirankaris, who seek to liquidate the Sikhs by employing the methods of public ridicule. And the Nirankaris appear to be confident of Government support. Giani Zail Singh when Chief Minister of Punjab, obliged them by appointing their adherents to key positions in the Government and the present Chief Minister, Darbara Singh has refused to pursue a case of mass murder registered against them.

There was an allegation in the press that the Nirankaris have been sponsored by the Central Government. That they also enjoy ample sympathy from the anti Sikh forces in the State cannot be denied. Emboldened thus they often clashed with the followers of Bhindranwale, especially in Gurdaspur where a Nirankari official was functioning as the Deputy Commissioner. The bloodiest clash took place at Amritsar on Baisakhi Day in 1978 in which 13 Sikhs were killed.

Many Nirankaris including the head of the mission were tried for murder and acquitted. Refusal to challenge the acquittal lit the powder keg and Punjab has not had a day's peace since. About 25 non Sikhs and more than 100 Sikhs have died following clashes.

Anybody familiar even with recent history could have predicted the Sikh response. The terrorist Babbar Akali Movement was the result of the acquittal of those responsible for the mass murder of Sikhs at Nankana Sahib in 1921. Indeed terrorist activity has been the standard Sikh response to denial of justice. The principal accused the Nirankari Chief and Lala Jagat Narain a Jullundur based journalist, a prominent Sikh baiter and the prime defence witness in the Baisakhi Murder Case, were both killed in quick succession. The confused authorities hurriedly pointed to Sant Jarnail Singh as the conspirator and hastily issued warrants for his arrest even before the culprits were known or apprehended.

An absolutely illegal mode of action was employed to run the Sant to earth. Not finding him at the expected place the police set fire to his vehicles and burnt Sikh scriptures. Not much imagination is needed to predict his fate if the Sant had been located. Since then many young men similarly accused have perished in fake police encounters. False criminal cases have been registered against many others. The Sant was arrested, interrogated and eventually released as nothing could be established against him. The abetment of sacrilege by the authorities, their utter lawless behaviour (especially the wanton destruction of the scriptures and liquidation of innocent people) has deeply hurt Sant Jarnail Singh.

Having seen all this, the Sikhs feel convinced that the Sant's liquidation is on the cards. He can never overprotect himself. Circumstances, prudence and constant persuasion of well wishers have forced the Sant to retain an armed escort.

Similarly the persistent and blatant violation of the prevailing Constitution and established laws can be pinpointed to be the root cause of all important Sikh grievances. The much maligned secessionist Bhindranwale is prepared to accept a just constitutional solution to every demand of the Dharamyudh Morcha. But just solutions are being persistently denied. No textbook situation could be more perfectly designed to make the Sikhs feel completely alienated, degraded and deprived. The Government is working overtime to turn Sikhs into adherents of the Sikhs. Are A Nation theory.

Determined not to be outdone the Hindus (referred to above) are vehemently arguing that eternal political domination of an unalterable cultural majority is the essential precondition of India's unity. This anti democratic stance violates the concept of a multicentral or plural society, the most cherished dream of Sikhism. Even the warning of Sir Winston Churchill (issued in the House of Commons on December 12, 1946) remains unheeded. He said: "I am sure that any attempt by the Congress Party to establish a Hindu Raj on the basis of majorities measured by standards of Western civilisation and proceeding by the forms and the formulas of the government with which we are familiar over here will, at a very early stage, be fatal to any conception of unity of India." *(Hansard Vol 431 No 23 P 16)* The chickens are now coming home to roost.

The Sikh people have weathered many a storm and shall prevail against the present onslaught. Much more than their destiny, the political wisdom of the Hindu majority is on trial.

Doctrinally the Bhindranwale Taksaal is not against harnessing politics to protect religion. Bhai Mani Singh, the originator of the order, effectively used the dream of Khalsa Raj to preserve religion. Though chief priest of the Harmandar he was elected Chief Controller of Sikh Political Activity and was installed as Jathedar of the Akal Takht. An echo of this can be heard in the demand of the Ex Army Men's Convention at Amritsar to appoint Bhindranwale as Jathedar of the Akal Takht. Significantly Sant Harchand Singh, dictator of the *Morcha*, also hails from Longowal (the reputed birthplace of Bhai Mani Singh) and heads a gurdwara in his memory. In his martyrdom the Bhai had become a rallying point for the Khalsa. He did not rest until his ideal of a Sovereign Sikh State was realised. Is history repeating itself?

Repeated attempts have been made to humble Sikh pride. They have been systematically deprived economically and politically. A healing touch of tolerance and a full measure of justice are needed. Half hearted acceptance of inconsequential religious demands or an unprincipled package deal will *not* do. The overwhelming majority must forever quit irrational distrust of a microscopic minority. The Sikh people have weathered many a storm and shall prevail against the present onslaught. Much more than their destiny, the political wisdom of the Hindu majority is on trial.

In conformity with the traditions of the deathless Khalsa, Bhindranwale and his followers who have vowed to live by Truth alone, shall not accept palliatives. If Bhindranwale is martyred as it appears imminent he will be— the tragedy will leave a permanent blot on the body politic of India. That will be the beginning of the end. ■

Akali Agitation And The Services

Maj Gen Jaswant Singh Bhullar, AVSM, VSM (Retd), laments the fact that, while the criteria for all other jobs is merit alone, soldiering is the only profession where quota based on the population has been fixed—something that works to the detriment of Sikhs.

THE participation of ex Servicemen in the Akali Convention held at Amritsar on January 23 1983 has caused widespread concern. Nevertheless one would do well to analyse the reason for their participation.

The personality and the attitude of a soldier are governed by his tradition, his family atmosphere and his training. Therefore problems faced by the people of the soldier's home State naturally affect him.

Moreover both in his character and in his approach to life the Sikh soldier is strongly influenced by his religious traditions. It is important to understand that the very qualities which make the Sikhs distinguished soldiers also make them react to injustice, discrimination or attacks because their value-pattern is the product of their religion.

Years of neglect of ex Servicemen by the Central and State Governments has been the main cause of dissatisfaction amongst ex Servicemen, irrespective of their class or religion. Whereas his civilian counterpart retires mostly in the same areas where he formerly served, a soldier on retirement returns to an entirely different world and feels completely alienated. Besides, he is immediately faced with a drastic reduction in his income. Under the present inflationary pressure he finds it difficult to subsist much less live in dignity or discharge his family responsibilities since he retires at an early age. There is no relief either against the Rent Control or the Tenancy Act. A natural outcome of this is a feeling of resentment against the Defence Services and the Government.

Servicemen are pensioned off between the ages of 30 and 50 whereas a Class IV civilian employee can serve up to the age of 60. Why cannot this trained and disciplined manpower be utilised for jobs in industry and other public undertakings?

Then again in the civilian services if an employee dies in service his vacancy is usually filled by his widow, son or daughter or posts are created for them. In the Armed Forces the widow and the family of a dead soldier are heartlessly neglected.

It is true that all soldiers are given a raw deal and not just the Sikhs but, then Sikh history has always encouraged fighting against oppression and injustice. The resentment by Sikh ex Servicemen is further accentuated by the discriminatory tactics against serving Sikh soldiers. Their percentage in the Armed Forces is being reduced although Sikhs have always borne the brunt of our wars and suffered the highest number of casualties.

At the time of Partition in 1947 there were 30 per cent Sikhs in the Armed Forces. The ratio has now been fixed at 1.5 per cent and this has had a devastating economic impact on the rural Sikhs. For thousands of Sikhs soldiering was a family profession for many generations. Sikhs now feel that while the criteria for all other jobs is merit alone, this is the only profession where quotas based on population have been fixed.

Among the popular myths is one that Sikhs being well off do not come forward to join the Armed Forces. This is not true as in rural Punjab full 45 per cent of the families live below the poverty line. But as most of the recruiting officers in Punjab are non Sikhs they continue painting the false picture that Sikh recruits are not available. The fact is that almost all senior officers keep getting requests from villagers to help them get enlisted in the Forces but they find themselves helpless as the stock answer from the Recruiting Officers is that they have no 'Sikh vacancies'.

A majority of soldiers in Punjab come from peasant stock. They own lands which supplement their income from Government service. Water being the life blood of agriculture, any diversion of water from Punjab's rivers to neighbouring States vitally affects the soldiers and ex soldiers. By this diversion the loss of agricultural production alone would be over Rs 2,000 crores per annum. And the Central Government is not only unwilling to place its unconstitutional orders before the Supreme Court for a judicial verdict but has actually managed to withdraw the case filed for that purpose before that Court by the Akali Government. The Punjab peasant suffers crippling canal and electricity closures daily as well as a lowering of the water table. In actual terms the Akali Morcha is a product of the peasants' grievances and not vice versa. It is therefore virtually impossible for landlording soldiers or ex soldiers to maintain an indifferent attitude towards the problem.

In view of the sacrifices made by the Sikhs before and after Independence it would be naive to accuse them of an urge for secession. It has never even entered the minds of Sikhs least of all of Sikh serving soldiers and ex Servicemen to secede from India, especially while the holocaust of Partition still lingers in their memory. The Dal Khalsa which stands for secession is the brainchild of the Congress(I) leadership with a view to dividing the Sikhs and weakening them. The Sikhs believe that the Khalistan idea is a Government myth created to justify their uncalled for repression. The treatment meted out to the Sikhs by the Haryana Government during the days of the Asiad has badly jolted the Sikh psyche.

In fact the really relevant question today is not the loyalty of the Sikh soldier but the credibility of the Centre to act fairly and constitutionally and see that justice is seen to be done to Punjab and the Sikhs. ■

It has never even entered the minds of Sikhs, least of all of Sikh serving soldiers and ex-Servicemen, to secede from India: the holocaust of Partition still lingers in their memory.

Sikh Fears Are Groundless

K R Malkani writes about the dilemma in which the Congress government has put the Akalis "By talking of firmness one day and flexibility on another, the Prime Minister has confused and immobilised the Akalis," says the author

ONLY a few months back it appeared to be touch and go in Punjab There was a spate of murders followed by hijackings People talked of a Khalistani map and Khalistani currency notes The digging of the Sutlej Beas Link Canal had to be abandoned in the face of an Akali Morcha called Dharam Yudh

Today that situation stands defused thanks to the Prime Minister who ordered all satyagrahis released By talking of firmness one day and flexibility on another she has quite confused and immobilised the Akalis There have also been a few encounters' resulting in the liquidation of some suspected murderers The Operation Stop And Search of all Sikhs passing from Punjab into Delhi through Haryana on the eve of the Asiad was not very polite in some cases it was badly overdone But it did convey the no nonsense message to the Akali hot heads and put the agitators in their place

While all these developments have shown that this problem is manageable they have also shown that there is a problem And as is usual with such problems it is rooted in history

The partition of India in 1947 hurt the Sikhs very badly As many as half the Sikhs found themselves on the wrong side of the Radcliffe Line Giani Kartar Singh a Minister tried to settle as many of them as was possible in the five border districts And that gave them a feeling of unity and strength But the hurt remained In meeting after meeting Master Tara Singh and other Akali leaders would say Hindus got Hindustan Muslims got Pakistan what did we get? The argument was specious but it was not without appeal

The unstated conclusion was that the Sikhs should have been given a Sikhistan And yet nobody demanded Sikhistan explicitly because that would have alienated the community from the Hindus—and Pakistan would have crushed any Sikhistan if it had ever come into being The Muslims held the Sikhs particularly responsible for the partition time violence in East Punjab The *Dawn* once wrote that if Master Tara Singh was hanged twenty times over it would still not assuage their anger

Time is a great healer In a few years time the Sikhs made up their losses many times over Today they are perhaps the richest community in India But man does not live by bread alone Man must also have power—and personality And the Sikh is not very sure about his political power and his identity

Soon after Partition many Sikhs wanted a greater Punjab including Himachal Pradesh to provide them with more opportunities for expansion But they soon realised that in a bigger Punjab the percentage of Sikhs would be pretty low Torn between the choice of a *suba* and a *subi* they opted for a smaller Punjab to ensure a Sikh majority After resistance by Prime Minister Nehru and Lal Bahadur Shastri Mrs Gandhi conceded the *Punjabi suba* But very soon the Akalis realised that they had had the worst of both worlds they had not only got a small Punjab but they could not acquire political power in that State by themselves

About 70 per cent of the Sikhs support the Akalis But the non Sikhs do not vote for the Akalis And so the 30 per cent of the Sikhs and the non Sikhs- who are now 48 per cent of Punjab s population—can always produce a non Akali majority The Akalis can come to power only in alliance with the Hindus

Two options are however still open to them they can ally either with the Congress or the BJP If they ally themselves with the Congress they will be a junior partner in the alliance if they join hands with the BJS or BJP they will be the senior partner The latter arrangement is certainly more profitable for the Akalis However every time the Akalis have opted to coalesce as in 1967 and again in 1977—the Congress has broken it up with a two pronged attack

The 1967 Akali BJS CPI alliance was so successful that Zail Singh was heard saying These people are not only in power they are actually popular But soon the Congress press went to work In the popular mind as conditioned by Congress propaganda BJS Hindus are supposed to be more communal than Congress Hindus and Akali Sikhs are supposed to be more communal than Congress Sikhs Every time an Akali BJS(BJP) coalition was set up the Congress press would tell the Sikhs that the Akalis had sold themselves to the Jana Sanghis Simultaneously it would tell the Hindus that the Jana Sanghis had mortgaged Hindu interest to the Sardars

The Sikh fear of loss of identity is partly unreal and partly unrealistic. It is unreal because Sikhism has successfully grown on the Hindu body social; it is unrealistic because all identities change—with time and circumstance.

The comi tragedy of it all was that the lie was believed by enough people to bring the Government down It happened in 1969 and it happened again in 1979 Sad to say in 1969 the Congress did not hesitate to install the Akali defector Gill as CM—and give him a Minister called Dr Jagjit Singh who today heads the Khalistan movement

All this may be good politics for the Congress but for Punjab it is a pain in the neck While politicians fight business suffers Today nobody wants to make a major investment in Punjab!

It is for the Akalis to decide how they will resolve the dilemma in which the Congress has put them Perhaps they can do so effectively only by reorienting the Sikh mind—and replacing confrontation with cooperation They could delink the Akali Dal from the Shiromani Gurdwara Prabandhak Committee and convert it from a sectarian party into a regional party by throwing its membership open to all people of Punjab

Today the Akali membership is open to practising Sikhs who grow their hair and do not smoke or drink In practice some Sikhs smoke and most of them drink If the Akali Dal can overlook smoking and drinking it could also overlook shaving It is true that it is easier to ignore cigarettes and liquor than a clean chin but in substance abstinence is probably more important than appearance Such a regional party of Punjabis would smooth out Hindu Sikh angularities and leave no scope for the the Congress to exploit them

The Sikh fear of loss of identity is partly unreal and partly unrealistic It is unreal because Sikhism has successfully grown on the Hindu body social it is unrealistic because all identities change—with time and circumstance

Nobody need take the Akali formulation of Sikhs into a separate *qaum* literally In my younger days I once wanted to wear a dhoti to which my mother was opposed When I argued that even Gandhiji and Guruji wore a dhoti she retorted 'They are different *qaum* Obviously she did not mean that wearers of dhotis and pants belonged to different nations all she meant was that different classes and communities have different ways Need we take their Anandpur Saheb resolution too seriously? Indeed the way they have come up with different versions of that resolution some of them quite harmless—tells us not to take it seriously at all It will amuse people outside Punjab to learn that the masse have the greatest reverence for the Anandpur Saheb Gurdwara but they know nothing about the resolution When the Government rejected the Anandpur resolution Akali leaders were heard telling shocked Sikh masses Look they do not recognise our Anandpur Saheb It was reminiscent of the old Akali Communist campaign against the Congress and all it did including the construction of Bhakra They are taking the electricity out of water Such water will not be good for irrigation When the Akalis talk of *qaum* or the Anandpur resolution all that they really mean to say is that they are different—which is a fact And they are welcome to stay that way Ours is a pluralist society

However what in the world can they do about Sikhs who decide that they can be good Sikhs without having to tend long hair? Sardar Majithia was the Prince of philanthropists who started *The Tribune* Sardar Bhagat Singh was the prince of revolutionaries Both of them were clean shaven What purpose does it serve to insist that the press publish their pictures with a beard painted over? Any matchmaker in the Delhi Punjab area will tell you that many Sikh families prefer to have a 'Hindu son-in law And when some other Sikhs object, these families routinely explain It s too bad but our girl ran away and we were helpless

The Sikh problem as we know it today, is the invention of the British It was under British inspiration that Kahan Singh, Dewan of Nabha state came out with the pamphlet *Hum Hindu Nahin Hain* It was these separatists who removed pictures of Hindu gods and goddesses from the Golden Temple and other Sikh gurdwaras And it was these pro British Sikhs who invited Gen Dyer the Butcher of Jallianwala to Har Mandir and presented him with a *saropa* (robe of honour)

All this separatism--and toadyism—is alien to the Sikh ethos Nine of the Ten Sikh Gurus were Hindu Khatris none of whom was a 'Singh' Guru Gobind Singh who founded the Khalsa did so with the clarion call

Sakal jagat mahein Khalsa panth gajjay
Jagay dharma Hindu sakal bhand bhajay
(May the Khalsa panth flourish all over the world
May Hindu dharma awake and expose all falsehoods

It is significant that Guru Gobind Singh was neither born in Punjab nor died there He was born in Patna Bihar and he breathed his last in Nanded Maharashtra He was a worshipper of Goddess Chandi and he has written more Hindi than Punjabi

Maharaja Ranjit Singh established the Lahore Durbar on Divali 1761 he demanded that Afghanistan return the doors of Somnath and willed the Kohinoor diamond to Jagannath Puri When British rule came hundreds of Sikhs died for cow protection in the Kuka movement

It is for the Sikhs to decide whether they will follow the tradition of Guru Gobind Singh and Maharaja Ranjit Singh Sardar Majithia and Bhagat Singh or that of the tribe of Kahan Singh

If it is the former there is no problem If it is the latter it is a problem which even Pakistan and its godfather Uncle Sam would like to exploit to destabilise the Indian border However no patriotic Sikh would tolerate that Sikh associations all over India have deluged the Prime Minister with resolutions dissociating themselves from Akali demands For in their heart of hearts the Sikhs know that they are doing very well Only occasionally does the Congress monkey with them When a certain non matriculate opposed to the Congress wanted to become the SGPC President the Rashtrapati issued an ordinance prescribing matriculation as a minimum qualification Later when the Congress made up with that gentleman another ordinance was issued allowing non matriculates to become SGPC Presidents

That is what the Congress is doing to the Sikhs and that is what they rightly resent But otherwise there is no acute sense of genuine grievance If the Congress really wants peace and amity in Punjab, it should appoint a judicial commission to go into *all* the issues that the Akalis and others may want to raise—on condition that all parties will accept its recommendations *in toto*

One small psychological problem will remain The Sikh farmers are getting much farm labour assistance from UP and Bihar Even otherwise, they do not like to work in the fields after the age of 40 These aging farmers feel bored They love to visit the gurdwaras in different towns They love the excitement of morchas—fighting fronts—even more There are processions slogans newspaper headlines pictures They enjoy every bit of it Believe it or not but when the Emergency was lifted on March 21 1977, many Akali satyagrahis were positively disappointed at being released They kept saying "It s so nice here There s food, there are games there s company What's wrong with the Emergency? Why can t they continue it?"

Anybody who can think of a moral equivalent of a morcha will have done the greatest service to Punjab ■

Punjab In The Service Of The Nation

Darshan Singh Maini argues that what is really important is the climate of what C.P. Snow calls "the two cultures", the humanist and the scientific, which, he says, puts Punjab in a category apart.

Long live thy mansions and palaces,
And long thy huts and hamlets,
Long live thy queenly village belles,
Long those beauties of curds and cream!
O I greet you my sweet land
With each breath I take,
O I salute you, my heroic land!

Des Noon Assis Sadi Gharibon
'A Prayer For My Land'
—Puran Singh

THERE is perhaps no land which has not spurred its poets to song, and its fabulists into story, to orchestrate the music and the pageantry and the drama of its life from generation to generation. It appears that there is something in the pulse and the pitch of the feeling enveloping an expanse of sky, earth and water that feeds the imagination in a deep spiritual manner. Surely this instinctive and intuitive sentiment for one's land of birth shares its dynamics with the creative dialectic of life. That is why the maternal metaphor is almost always pressed into service whenever a people's deeper impulses need to be gathered into an evocative symbol. A motherland, then, is, in some mysterious way, an extension of the feelings and the felicities associated with the medium of milk, lap and roof. No wonder it arouses the tenderest emotions in our breasts and propels us towards the highest deeds of valour and sacrifice.

However, this sacred sentiment may not be wholly confused with the mystique of nationalism which, even as it subsumes the pieties of patriotism, can, in moments of challenge, anguish and bafflement, run away with the situation, so to speak, thereby distorting the structure of a people's sensibility. History has shown, time and again, the tragedy of such a mystique when the involved sentiment, instead of flowing freely and beautifully, begins to silt up the conduits of the imagination. That is when passions turn into vast mindless movements, ideas into blind ideologies. So, if I start with a poetic epigraph, it is only to affirm that the mere facts and the statistics pertaining to a geopolitical entity suggest little if they do not suggest the energies that animate them. No worldly goods, no objects or artefacts may materialise without the harnessing of the poetries of the spirit.

Which brings me first to what may loosely be called the Punjabi Way of Life, for the service which Punjab has rendered to the nation over aeons and ages is linked to a complex of attitudes, perceptions and values. Indeed, the Punjab *persona*, evolved in response to continual challenges and exertions, has come to acquire a force which has not a little to do with such expressions of the collective psyche. Even that celebrated triad of sobriquets which Punjab has earned—*The Sword Arm of India, The Bread-Basket of The Nation* and *The Nursery of Indian Sport*—when analysed in terms of significations, would go "homing" back to that *elan vital* which we associate with its image. For the fact is that all our overt attitudes draw their energies from the sub-surface life which people and communities and races live at the level of dream and fantasy. The Punjabi sensibility is, at once, steeped in the sensuous and phenomenological aspects of reality—the aspect which gets its freest play in action and engagement—and in a certain "mystic" encounter with it. It is the unceasing interplay between these two apparently contrary pulls which constitutes the kinetics of the Punjabi character.

To begin with, geography, history and destiny have given Punjab, of necessity, the role of India's eternal sentinel on its Northern borders. From the earliest invasions of the marauding hordes from the Asian highlands and plateaux down to the wars India has fought since Independence, this land has served both as buffer and battleground, as shield and armour. It has, in short, suffered grievously and continually through horrendous loss of life and limb, of possessions and property, but it has not allowed its humanist vision to be clouded. On the contrary, the Punjabi spirit, tempered in fire and flame, has acquired, *en route*, enormous reservoirs of nervous and spiritual energies. It has absorbed all the shocks and traumas of aggression this side of Delhi and thus helped the rest of the country live in comparative peace and safety.

—YOG JOY, Courtesy 'The Tribune', Chandigarh

Undoubtedly, the Punjabi traits of defiance, daring, vigilance, initiative, adventure and action that mark their corporate character stem from their *frontier* consciousness. And, lest we forget, it was Punjab that paid in full measure the price of Indian Independence in 1947. No nation could ask for more in terms of blood, scars and tears—and the Punjabi spirit did not falter, did not quail. If anything, it acquired new dimensions in Free India to disport itself and renew its natal pledge to redeem the destiny of this great but violated land. The fact that Punjab continues to supply the bulk of frontline officers and men for our Armed Forces, that they constitute the very pick and flower of our soldiery, that they would never fail the date with destiny if and when called upon to do so, is something so widely known as to need no comment.

What is perhaps not so well known is Punjab's contribution to the creation of the revolutionary ethos in pre-Independence India. Along with Bengal, it helped generate a whole new philosophy of action and deed—away from the passivity and the inert quietism of the classical Indian temper, away from the "sickness" of the soul. The Gandhian revolution, too, was essentially directed towards the same end, though the means were different. For men like Bhagat Singh and Udham Singh symbolised the eternal revolt of the human spirit in chains. The Promethean temper is an archetypal temper and the "spark" abides. Punjab thus remains an ever-watchful and unsleeping guard on India's vulnerable frontiers. The spirit of Guru Gobind Singh is verily abroad.

It is not surprising that the spirit which plumes up into a condition of combat at the slightest hint of oppression or indignity should draw its sap and pith from the soil I trust that there are few peoples in the world more wedded in body and soul to Mother Earth than the Punjabis. Soldiering and farming are, in reality, extensions of the same spirit of encounter and fulfilment in action. The way, for instance, the uprooted Punjabis—whose nostalgia for those smiling fields and pastures and orchards left behind in Pakistan has still a poetic quality—tamed an inhospitable stretch of territory on this side of the border and turned rivulet and rock, bush and bramble, into one long and lush dream in green in a matter of years is one of the minor miracles of our times.

What is indeed known as "The Green Revolution" is nothing but the insatiable appetite of the Punjabi peasantry for land and for the land's largesses—corn and vegetable and fruit, honey and milk and meat, juice and liquor and beverage. The force that drives the Punjabi spirit, no doubt, is "the force that through the green fuse drives the flower", to recall Welsh poet Dylan Thomas's memorable line. It is also the force which raised the Bhakra Dam, Free India's greatest enterprise in the service of the nation.

It is, therefore, in the fitness of things that Punjab should emerge as the saviour of the nation on the food front as well. The figures for 1981 reveal that the State contributed 73 per cent of wheat and 48 per cent of rice to the National Food Pool despite the fact that it is, since 1966, the fourth-smallest State in India. Imagine, for a moment, an India deprived of this bounty! All I can add is that "the imagination of disaster" will not then be contained.

From the battlefield and the cornfield to the field of sport is again a smooth progression. The field as a figure of speech holds in each case. The Punjabis are, as a rule, given to a life of play and abandon. Their extrovert nature demands, not only a state of gaiety amidst challenge and encounter, but also a state of physical engagement. The Punjabi penchant for vigorous exercise of limb and muscle is a part of its restive psyche. That is why in nearly all important or major areas of sport—Hockey, Athletics, Football, Mountaineering, Cycling, Wrestling, Boxing, Weightlifting, now even Swimming and Cricket—Punjab has a dominant voice in the country. A Milkha Singh is about the peak of our reach and achievement in World Sport—"The Flying Sikh" image has already entered the sports idiom and lexicon Similarly, the all-time great Balbir Singh remains in hockey the limit of our glory.

There is no need to unroll the notional scrolls of sport to see how Punjab has done duty in this regard. And though Indian Sport, by world standards, is still woefully weak, what hope there is resides in no small measure in the promise of the Punjab youth. Appropriately, therefore, the Netaji Subhas Chandra National Institute of Sports is located in Patiala, a city redolent of princely sports and fabulous names. *Asiad 82*—the greatest show ever in Oriental Sports—mounted in Delhi with an efficiency and *aplomb* which left the sporting world fairly wondering, was, of course, a giant corporate endeavour, but nearly all its top executives (including Sardar Buta Singh, India's Sports Minister, Raja Bhalendra Singh, Sardar Umrao Singh and Principal Gursewak Singh) were, as one can see, drawn from Punjab. The moral is loud and clear. →

The scene shifts and expands from the farm and the field to the road and the highway. Punjabi domination in Road Transport—in metalled mileage, in the number of vehicles, in men behind the wheel and in the motor-parts industry—is so much a part of the road culture and folklore in India that an outsider is apt to take the Punjabis as a community of drivers and mechanics! And, indeed, there is many a joke and story current regarding that tribe. Essentially, the Punjabi spirit can be equated with the spirit of motion and speed. As in the case of the Americans in general, there is in the Punjabi psyche a perpetual urge for movement, a wanderlust.

For the roving Punjabi spirit, then, the horizon is the limit. So the truck and the tractor, the bus and the cab (which haul millions of tonnes and lakhs of passengers across the length and breadth of India round the clock), have emerged as new symbols of our folk culture—and of Punjabi traffic with the near and the far. The Punjabis, in short, are the nation's wheels and serve as the locomotives of its progress.

The story of wheels is not yet done. For several reasons—lack of mineral resources, the proximity of the Pakistani and Chinese borders, the Centre's calculated indifference—Punjab has no big or largescale industries, but the entrepreneurial spirit of the Punjabis has found a purposive outlet in medium and small-scale industries, such as cycles, sewing-machines, electric fans, machine tools, agricultural instruments, tractors, light engineering, sports, hosiery, mini-steel plants. And, in most of these areas, it leads the rest of the country. The export earnings from over 60,000 such units would indicate the dimensions of the effort to keep the small wheels going. Woollens and knitted garments alone account for over Rs 30 crores a year. No wonder Ludhiana is often referred to as the Birmingham of India, while Amritsar, Jullundur, Batala, Gobindgarh and scores of small towns on the national highway and in the interior have created an invigorating air of enterprise, skill and inventive daring. What is more, when India's first nucleus Industrial Township at Goindwal gets going, the Punjabis may well boast of achieving Japanese standards in these and collateral industries if political conditions and considerations do not upset the applecart of their dreams.

In this connection, it may also be mentioned that the Punjabi entrepreneurial and professional skills and labour have found a ready hospitality abroad. As a people on the move, there is hardly a part of the globe where the Punjabi engineers, doctors, teachers, businessmen, artisans, mechanics, factory workers and farmhands have not set up home and shop. And no matter where they settle—in Southall or in the Midlands, in Toronto or in the remote Canadian provinces, in New York or in the Californian valleys, in Kuwait or in the UAE, in Hong Kong or in Singapore—they all carry their "little" Punjab *with them and within* themselves, a home away from home: a node of nostalgia! The remittances (nearly Rs 700 crores) keep the families here in liquor and larder, but they also help swell the national foreign exchange reserves year after year. Home or abroad, the Punjabis make money for the country and make it in generous measure.

If the theme is money-making and national revenue, then the Hindi film industry in Bombay is virtually the creation and the monopoly of the Punjabis settled there. From producers and directors like the Kapoors, the Chopras, the Anands and the Dutts (to name only some clans) to the male heart-throbs of the Indian screen today (Dharmendra, Rajesh Khanna, Vinod Khanna, Raj Babbar, Rishi Kapoor and the up-and-coming "patrician" stars like Sunjay Dutt and Kumar Gaurav)—not to speak of the celluloid "villains" like Ranjeet, Amrish Puri and Shakti Kapoor and character actors like Manmohan Krishna, Pran, Madan Puri and Kulbhushan Kharbanda, Punjabi talent, enterprise and finance keep the nation in good cheer and in good money, too. Of course, the first Punjabi to hit it big in this wayward industry was the late K.L. Saigal—and his spirit and his voice still presides over Indian hearts and ears.

Since the emphasis in this article is on the material contributions of Punjab, naturally its role in the fields of culture outside of the cinema—art, music, theatre, literature, science—has not been highlighted. Which is not to say the effort in this direction is inconsiderable. Particularly since Independence, the renaissance witnessed in this regard, though nascent in certain ways, is vigorous enough to hold an equally great promise. Such names as Amrita Sher-Gil, Satish Gujral, Krishan Khanna and Dhanraj Bhagat among the artists, Mulk Raj Anand, Krishan Chander and Amrita Pritam among the writers, the Nobel Laureate Hargobind Khurana and Satish Dhawan among the scientists would do any people or nation proud.

However, what is really important is the climate of what C.P. Snow calls "the two cultures"—the humanist and the scientific—which seems to put Punjab in a category apart. Indeed, whatever progress the State has achieved is finally rooted in that *spirit of modernity* which seems to sweep Punjabi life nearly at all levels. A whole, radical way of looking at the business and traffic of life is needed before a people can secure their rightful place in the sun. Pragmatism has to be tempered with dream, action with vision, if the eye is set on the stars. ■

Darbara Singh Speaks

YOG RAJ. Courtesy 'The Tribune', Chandigarh

Darshan Singh Maini spent 90 minutes with the Punjab Chief Minister Darbara Singh, talking about various problems, like Chandigarh, the Akalis, etc, which face the State.

Darshan Singh Maini: How, in your view, has the Punjab problem become so intractable, confused and tangled? Do you hold the Akalis exclusively responsible for it?

Punjab CM Darbara Singh: The problem is a creation of the Akali Party and it is not a new problem. The real problem is the problem of power. As they are out of power, the Akalis have launched this agitation.

When all the political parties in Punjab have almost wholly endorsed the Akali demands on the issues of water, Chandigarh and territorial adjustments, why should the Centre see it as a purely Akali affair?

That is what we also think. The demands are not those of the Sikhs alone. The Punjabis, in general, are involved. However, we believe in solving all such difficult problems through negotiations.

How do you account for the failure of the Punjab Government to control the extremists and bring them to book?

It's believed that some of them have sought shelter inside the Sikh temples and shrines. It has long been a declared policy of the Government not to violate the sanctity of holy places and we are observing that policy. However, we do keep a watchful eye.

Why did the Punjab Government withdraw the water dispute case from the Supreme Court? Wasn't this done to help win elections in Haryana? Why is the Centre shy of referring it back to the highest judicial body in the land if it hasn't a bad conscience about it?

Again, why didn't the Centre bring pressure on the States involved in the Narbada water dispute to help Rajasthan? Rajasthan was also a party to the dispute, but being a non-riparian state, it lost its case.

It's a complicated issue and I've been trying to get as much water for Punjab as possible. Under the 1981 award, I was able to get Punjab's quota enhanced. As for the Akalis, I doubt if they are really serious about it. They accepted the position when they were in power. The Badal Government accepted rupees one crore from the Haryana Government in connection with the digging of the canal in their territory. Mr Badal even agreed to associate himself with the digging ceremony. Again, when the Akalis formed part of the Janata Government at the Centre, Mr Morarji Desai curtly rejected all their pleas for the reopening of these issues.

This may be so, but the question remains that the Akalis now will not be satisfied so long as the decision is political and not juridical.

Nobody is against such a step. The Akalis, however, want to refer the matter to a Special Tribunal under their own terms of reference.

I don't think that's the Akali position as I understand it. They do not want a Commission or a Tribunal now. They simply want a Supreme Court verdict. Why don't you take the wind out of their sails if the Centre's case is legally so strong?

Well, as I've said, they are adding "ifs" and "buts" and they want the thing on their own terms.

And what about the Narbada case?

We aren't concerned with it.

How do you react to the Centre's proposal to divide Chandigarh? Wasn't the statement of the Pradesh Congress President, Mr Hans Raj Sharma, an "inspired" utterance? Will it not amount to insulting the memory of two of its great progenitors, Jawaharlal Nehru and Le Corbusier?

We don't want to deface the city. I'm a political person and I wouldn't suggest anything. But I do want it to be part and parcel of Punjab.

In case, despite your pleas and stand, it's decided to divide it, will you resist?

I have not to carry on a war against anybody. Suppose you are a judge and the decision is yours, should we not accept it?

There's a widespread feeling that the long, protracted negotiations and the shuttle diplomacy are just eyewash. The Centre is using the same strategy as in Assam. What are your comments on the politics of attrition?

How is it eyewash? The fact is that all their religious demands have been accepted. The Prime Minister is quite anxious to resolve all these issues in a very reasonable manner.

Who is he to demand such apologies? No high official ever saw him for any such purpose.

How far is it true that at one stage you even threatened to resign in view of the Centre's unhelpful attitude towards the issues of water and territory?

I am a very disciplined person. I never hurl threats at anyone. Mrs Gandhi is my leader and she has given me the highest position in the State, it is my duty to put all the facts before her. It is up to her to decide.

There is again a persistent feeling that Punjab continues to be discriminated against in matters of big industry, atomic energy, etc.

What kind of big industry can be put up here? I have put my whole weight behind the demand for an atomic energy plant. We are, of course, close to the Pakistan border and the new type of supersonic planes have greatly reduced even this small distance. We are pursuing the matter and the sites are being located. Mrs Gandhi has even cleared the Thein Dam.

And now, sir, to some broader political questions facing the country. What are your views on the acceptance of "black" money by political parties? Don't you think that by issuing bonds to legalise such money, the Union Government is guilty of a moral lapse?

Well, the trouble is there. People want an easy and luxurious life and the industrialists want to grab money.

No, that's not my question. What should be the attitude of the political parties towards this social evil?

Political parties should receive money by receipts.

But under the Constitution, they are debarred from accepting money that way.

There is no other means of getting money. As for the special bonds, the Government has in its wisdom put that money back into circulation. It will help our economy. However, the Prime Minister is taking some measures against blackmarketeers.

What are your views on defection? Why doesn't your Government move a bill to stop this immoral practice?

We can't do it. It's for Parliament to take action. Defection must be stopped, but we can't do it by force or by the enactment of some law. Besides, there are many difficulties and complexities about it all.

The Punjab problem, CM Darbara Singh believes, is a creation of the Akali Party and it is not a new problem. The real problem, he says, is the problem of power. As they are out of power, the Akalis have launched this agitation.

How has the Akali Dal been able to win the sympathies of so many retired Sikh servicemen and officers? Even the Sikhs settled abroad have supported the Akali agitation.

Punjab is the only state which has created an Ex-Servicemen's Corporation with an investment of rupees five crores. Other amenities are also being given. The Cabinet has also decided that the retiring servicemen could have their houses immediately vacated if they wrote to the Government.

As for the Sikhs abroad, some do support the Akalis, but not to the extent the papers make out.

How far is it true that Sant Bhindranwale is a creation of the Congress(I) and that he has on occasion summoned high police officers and extracted apologies from them?

How do you account for the massive defeat of the Congress (I) in the South?

I can't say from a distance how it happened. Of course, we learnt a lesson and we organised our workers and won the Delhi elections.

Don't you think the reverses, in Andhra particularly, were due to the resentment of the people against the Centre's policy of shifting Chief Ministers, etc?

Not the resentment of the people but some sort of negligence on our part to meet the people through the media and mass contacts.

And what about the Assam tragedy?

It's a great tragedy but the Congress Government is not to be blamed; only certain groups in Assam.

The Prime Minister could have stopped the elections after the first round. This, it is said, was suggested by the Chief Election Commissioner.

I don't know. Under the Constitution, it was incumbent upon the Government to hold elections.

And finally to some specific Punjab problems. Why didn't you both as Chief Minister and as a Sikh openly protest against the intolerable offence to the entire Sikh community by the Haryana Government during the period of the Asiad?

In my own way, I have done it. I spoke to Mr Bhajan Lal personally about it. It is all very unfortunate.

Did the Punjab Government protest against the Haryana Government's language policy? How is Tamil the second language in its schools when a substantial part of Haryana's population consists of Punjabi-speaking people?

We can only request the Haryana Government. We cannot lodge a protest. They adopted Tamil under the 3-language formula.

Isn't this mischievous? Did they have to go to Madras to pick up their second language? Isn't this a clear case of discrimination?

Discrimination? I can't say that. But all the same, I feel that the Punjabi-speaking people in that state should be given this facility.

And now back to Punjab. Do you think a strong Governor is not a workable proposition under our Constitution? I have, of course, the case of Mr Chenna Reddy in mind.

No, it depends upon the person in the chair. A constitutional head has to work in cooperation with the Government.

There was some trouble about the appointment of the Punjabi University Vice Chancellor? Why didn't your Government move the matter in time when it knew the fate of the outgoing Vice-Chancellor well in advance?

One name was there all along; only the Governor had to approve it.

Is there a proposal to appoint a pro Vice-Chancellor also when it can only complicate matters and lead to further politicisation and communalization there?

Yes, there is a proposal. How can it complicate matters?

There will be another rival centre of power won't there?

What have you to say about the sudden retirement of Mr I.C. Puri, your earlier Chief Secretary?

He was taken out of Punjab for a higher post in Mussoorie. As for his resignation well, he resigned and the Government accepted it. That's all.

What about the shameful episode regarding the slapping of the lady Chairman of the Punjab Public Service Commission? What action is being taken in the matter against the Member concerned?

The Supreme Court is investigating the case. I cannot pass remarks at this stage.

Why does the Government regard the Commission posts as well as the Corporation posts as political prizes and plums for the proteges? Quite a few do not have any kind of qualifications.

Since I took over, there is not a single instance that can be cited.

Talking of corruption, why is your Govern

ment reportedly wanting to allow I.A.S. officers, their wives and children the use of staff cars at the royal rate of 25 paise per km? And all for picnics, kitty parties and the like! How can one raise a finger at the less fortunate employees later?

It is not a fact, just a rumour. The Government has no such intention. Only in emergencies such as hospital cases they may use staff cars.

How do you propose to deal with the chronic problem of dissidence in your own party? Do you propose to make changes in your Cabinet?

Only time will tell.

What concrete steps has your Government taken to stop the shameful and barbarous burning of brides in the State? The crime incidence in this regard shows an upward swing.

I think we have taken more cases to the court. These were ignored by the previous Government. It is a social evil and we are trying to deal with it seriously. We are not leaving it to chance.

How are the interests of the Punjabis overseas being protected by your Government?

We have opened a service-window here in addition to the *Punjab Newsletter* brought out by our Overseas Indian Cell. They want to set up electronic and other industries and we will give them all kinds of priorities and facilities.

You, sir, have a fairly clean public image and I understand your sons are running a small hotel somewhere in Bihar. But what about the phenomenon of dynastic politics in this country?

My sons have been in that business for the last 25 years and they are more Biharis than Punjabis in some ways. They have no financial connection with me.

I am talking of dynastic politics in general.

I don't understand how. I'm asking everybody to keep their sons away from it.

And finally, could you list the really outstanding achievements of your Government?

Our major achievement is in the field of rural hygiene. We have covered over 1,000 villages already. We are trying to improve the quality of life in the country. Even the Opposition parties recognise this fact. We have also made significant progress in the setting up of new, small and medium-scale industries. Also in road transport. Another major investment sector is power.

But the state buses continue to be hopelessly overcrowded.

That's true. With the increased population and higher standards of living in Punjab, there is far more travelling. However, we are trying to solve this problem also. ■

Punjabiat In Peril

Dr V.N. Tewari feels that the Punjabis, unfortunately, are not behaving as Punjabis, but are being split as Hindus and Sikhs. The challenge before the Punjabi writer, he says, is whether he overpowers communalism or communalism overpowers him.

LET me, to begin with, try to define the concept of what, for want of a better expression, is loosely called *Punjabiat*. We often talk of the "Englishness" or the "Americanness" of certain thinkers, writers and artists. The phrase, as we know, is intended to convey a whole complex of attitudes and perceptions and values. Its power essentially lies in its ambience and in its suggestiveness. *Punjabiat*, then, is a cultural and not a geographical concept.

To see it in action or in a palpable form, two global conferences were organised lately. Attended by over 60 Punjabi writers from India, Pakistan, the United States, Canada, Holland, Singapore, East Africa and Zambia, the first World Punjabi Literary Conference was organised by the Progressive Writers' Association of the UK in 1980. The Second Conference was held in Canada in 1982. And the Third is scheduled to be held in India in December 1983.

The Punjabi writer is very proud of the fact that, though the boundaries of his Punjab have been shrinking since 1901, yet the growth of the Punjabi language and Punjabi literature has shown a continual upswing. However, he is disturbed to note the paradox of the situation today where Punjabi literature forges ahead as an international entity even while Punjabi culture is beginning to lose its composite character. Such a dichotomy is inexplicable. The Punjabi writer, who has never been communal at any time, is thus in great agony over the upsurge of communal tension in Punjab. He finds himself in a state of uncertainty, if not confusion. This, in a way, is the badge of his integrity and authenticity. One recalls the memorable lines of W.B. Yeats from *The Second Coming:*

The best lack all conviction, while the worst
Are full of passionate intensity

The problem in Punjab is really complex. On the face of it, it is a simple power game between the Akalis and the Congress, between the Centre and the State. It faces the danger of turning into a communal problem. Punjab, being a border State, also faces the danger of being exploited by Power Blocs and international agencies. At the moment, therefore, the Punjabi writer is forcefully pitchforked into a situation which has political, regional, communal and international dimensions.

Unfortunately, language and religion have been so mixed up in Punjab that the Punjabi language has, quite often, been a casualty and the concept of *Punjabiat* a kind of heresy. Although Punjabi is the official language of the State, yet Punjabi is not entirely the language of administration, justice and education even today. Similarly, the number of publications in Punjabi is more than two hundred a year, yet not a single writer in Punjabi can live on his writings. The Punjabis can spend a great deal on whisky, chicken and clothing but, somehow, refuse to buy books, especially those written in their own tongue.

Against this socio-religio-political background, the Punjabi writer feels forlorn and alienated. There is another reason for his alienation. He feels shattered within because of the fast changing way of life. Inventions of science have brought the world nearer but, unfortunately, the distance between man and man is increasing. Scientific inventions are becoming an integral part of our life, but we have not been able to adopt a scientific outlook so far. Disharmony, frustration, loneliness and alienation have thus become a condition of the mind and the imagination. The militant, young Punjabi poets, however, felt that the bullet, and not the ballot, could answer their purpose. Poets of this movement--Pash, Chandan, Joga Singh and Lok Nath--are still writing, though one misses the militant ardour in their recent poetry. Pash writes:

Main jo sirf ik adami banana lochdu si
Aeh ki bana dita gian haan
When translated
I wanted to be no more than a man,
Oh what have I been reduced to?

Idealists, like the Marxists, are also torn within themselves and are struggling to locate their "centre". Jaswant Singh Neki finds the *kendar*, or the "centre", rather shaky:

Vicharan di afratafri chon
Vikendrit shanti ne janam lia
Par kendar aje vi ashanti si.
When translated

Out of the turmoil of thoughts,
Only that peace could come
Which had no centre, no hold!

Pritam Singh Safeer's mysticism has not outgrown the world of flesh.

Jisman di agg machche
Behosh haun hoshan
The bodies burn still,
And the senses are inebriated.

Capitalism, Communism and Democracy have not solved the problems of man. Amrita Pritam feels deserted and alone.

Aeh ik koi ohh hai
Jo bari var sadan te nahin aya
Te hun main ikali nahin
Main apne aap naal khari haan
He it's who never responded
to earnest invitations,
And now I'm not alone,
I share the space with my own self

Loneliness amidst the good things of life in the poetry of Prabhjot Kaur, Harbhajan Singh, Ajaib Kamal and Ravinder Ravi is also disconcerting. Similarly, Amitoj, Manjeet Tiwana, Mohanjeet, Harinam, Sarod Sadeep, Kuldeep Kalpana, Jasbir Ahluwalia, Sharan Makkar and Surjeet Pattar are still trying to come to terms with the problem of identity in their poems. To use Erikson's well-known phrase, they are all facing an "identity crisis". Progressive poets like Gurcharan Rampuri, Jagtar and S.S. Misha do not seem to be sure of the revolution. Thus the present Punjabi poetry lacks "militancy" as well as "faith". What will the Punjabi poet invoke? God, society or the beloved? At the moment, he is depressed, disillusioned, torn and alone. Will he follow "neo-spiritualism", or "neo-progressivism", or still be a "lone individual" is the question-mark before the contemporary Punjabi poet. My own poetry too faces this crisis:

Shehran di bhir vich
Cheran di bhir vich
Rishtian di bhir vich
Main upne supne di ungli phar
Tur nhan han ikala.
Holding the little finger of my dream,
I wend my way alone,
Through the multitudes of towns,
And the multitudes of faces and relationships

Turning to the novelists and short-story writers, one finds the theme of sex, of pre-marital and extra-marital relations, an obsessive concern. Such a preoccupation may be a revolt against the repression of natural urges, it may be for commercial reasons, or it may show the anxiety to depict the true face of contemporary society. The latest writings of Kartar Singh Duggal, Narendra Pal Singh, Balwant Gargi, Amrita Pritam, Ajeet Kaur, Santokh Singh Dhir, Maheep Singh, Mohan Kahlon and Surjeet Singh Sethi are explicit enough. Progressive writers like Jaswant Singh Kanwal and Gurdial Singh have also not been able to sustain themselves. Maybe theirs is the frustration of the writer unable to play his role in the process of social change. Sex may thus be the only outlet of escape for the Punjabi writer thus situated.

The growth of the Punjabi theatre is, however, a significant feature of the contemporary Punjabi scene. From folk theatre, it has graduated to modernist in the course of the last decade or so. Sheila Bhatia and Harpal Tiwana are popular with the city elite. Gursharan Singh and Ajmer Aulakh, on the other hand, translate more fully the dream and the desire of people in the country. Punjabi literature thus is beginning to acquire a kind of cosmopolitan, modernist character, though it seems, at the same time, to be drifting away from its deep roots and healthy traditions.

I am proud of being a Punjabi because I am born in the land of the *Rig Veda*, the *Gita* and the *Guru Granth*. Yet I am deeply anguished to see that great humanist tradition violated in spirit again and again. The catholicity of the *Guru Granth* may well be seen in the nature and the rationale of its composition. Namdev from Maharashtra, Kabir from UP, Farid, the Sufi poet, Ravi Dass, the Harija--all find an honoured place in this unique scripture. It is a pity that we have deserted that great tradition in the hour of our trial. We have reduced it to polemics and party gains. The Punjabis, unfortunately, are not behaving as Punjabis, but are being split as Hindus and Sikhs. The challenge before the Punjabi writer is whether he overpowers communalism or communalism overpowers him.

It is only when *Punjabiat* becomes a living experience or a creed for us that we can hope to salvage something of the ruined image of Punjab. And, to this end, our writers and artists must bend all their energies and all their talents. A writer, says James Joyce, "is a priest of the eternal imagination" and helps create the conscience of his people and race. ■

Punjabiat is a cultural and not a geographical concept. The Punjabi writer is disturbed to note the paradox of the situation today where Punjabi literature forges ahead as an international entity even while Punjabi culture is beginning to lose its composite character.

AKALI DAL (L) AND CPM VOLUNTEERS uproot a barricade at Kapuri on May 24, 1982. Kapuri is the village from where the Haryana Government had to start digging her part of the Sutlej-Yamuna canal. Punjab has very strong views on sharing its river waters with any other State.

River Waters: Their Life-Blood

Gurdev Singh says that true statesmanship calls for a bold and early decision. Prolonging the controversy can only increase tension.

THE protracted Centre-Akali talks to resolve the Punjab tangle have been bogged down by the refusal of the Union Government to refer the question of distribution of the Punjab river waters to the Supreme Court for adjudication in accordance with the law and the Constitution. This issue has assumed considerable importance and calls for careful examination to ensure a just and lasting solution

Punjab is the granary of India. it feeds the entire country by increasing the production of foodgrains from year to year Self-sufficiency in food has been achieved as a result of what is called the Green Revolution, brought about by its industrious peasantry wedded to the soil and by mopping up all the resources, primary among them being the subsoil and river waters Every effort is being made to bring larger areas under irrigation and to step up production by effecting changes in the cropping pattern In this situation, it can well be appreciated why a Punjabi regards the waters flowing through the rivers of Punjab as his life blood

To exploit the agricultural potential of the Punjab plains, the British Government set up an elaborate and extensive canal system to carry Punjab's river waters to the needy areas. Vast canal-irrigated areas were left in Pakistan at the time of Partition, and, for its cultivable areas, Punjab had to devise its own ways and means of irrigation to make them productive Fortunately, the present Punjab was still left with three rivers (Sutlej, Beas and Ravi) flowing through it. The exploitation of these rivers for agricultural purposes and for the production of electric energy thus became an urgent necessity A similar situation had to be faced by Pakistan, as it was in peril of losing the waters of the three rivers that ran through the Indian part of Punjab

This created a serious problem for both the Dominions regarding the use of their water resources— a problem they ultimately agreed to solve with the good offices of the World Bank In the year 1954, the World Bank put forward a proposal that Pakistan should have no claim to the waters of the three eastern rivers running through Punjab- the Ravi, the Beas and the Sutlej—and retain full control over the Chenab, the Jhelum and the Indus for its exclusive use This proposal was accepted by both countries and, ultimately, on September 19, 1960, the Indus Water Treaty was signed Under it, Pakistan lost all claim to the waters of the three Punjab rivers. they became available to India for unrestricted use after March 31, 1970.

On November 1, 1966, the State of Punjab was reorganised and a separate State of Haryana came into being Even after this reorganisation, the three eastern rivers continued to flow through the territories of Punjab alone (where their basins also lie), to the exclusion of Haryana and other States The waters of the Sutlej had, however, already been planned to be utilised for the Bhakra Nangal Project.

Under Section 78 of the Punjab Reorganisation Act, it was laid down that the rights and the liabilities of the successor States in the Bhakra Nangal and the Beas Project would be as agreed to by them but, in the absence of any such agreement within two years, they would be determined by the Central Government.

No agreement of the type contemplated under this provision having been arrived at between the States of Punjab and Haryana, the Central Government, by its notifications dated March 24, 1976, allotted the Ravi-Beas waters in the following manner

Rajasthan	8.00 MAF
Haryana	3.5 MAF
Punjab not exceeding	3.5 MAF
Delhi Drinking Water Supply	6.2 MAF

The Punjab Government protested against this arbitrary decision Later, when the Akali Government came to power in Punjab, it filed a suit in the Supreme Court, under Article 131 of the Constitution, on July 11, 1979, challenging, *inter alia*, the validity of the above-mentioned allocation order and the *vires* of Sections 78 to 80 of the Punjab Reorganisation Act 1976 under which the Central Government had assumed control of the Punjab Projects and made the apportionment of waters and energy of the Punjab rivers While this matter was still pending adjudication before the Supreme Court, the Central Government managed to secure an agreement of the Chief Ministers of Punjab, Haryana and Rajasthan on December 31, 1981 Under this agreement, the suit was withdrawn and the award of 1976 was modified as follows:

Share of Punjab	*4.22 MAF*
Share of Haryana	*3.50 MAF*
Share of Rajasthan	*8.60 MAF*
Quantity earmarked for Delhi Water Supply	*0 20 MAF*
Share of Jammu & Kashmir	*0.65 MAF*
Total.	*17.17 MAF*

It may be noticed that, though in the later notification the share of Punjab was slightly increased, in reality this increase was illusory, since the total quantity of water available for distribution was stated to have increased from 15.02 to 17 17 MAF. This has been described as a jugglery of figures. In his recent statement published in *The Tribune* of March 9, 1983, Dr Kanwar Sain, former Chairman of the Central Power and Water Commission, specifically asserted that the availability of river waters for distribution in 1981 was only 15 85 MAF

Although the orders of allocation purport to have been made under Section 78 of the Punjab Reorganisation Act because of the failure of the Successor States to agree between themselves within two years, the Central Government did not confine itself to apportionment between them but overstepped its authority in gifting away more than 75 per cent of the available water of non-riparian States, leaving less than 24 per cent

Continued on Page 29

It is only after fully meeting the needs of the riparian State of Punjab that any part of surplus water can be made available to another State; and that, too, on such terms as are considered beneficial to the riparian State.

The Artisan Of Gods

Amrita Pritam talks to Nek Chand, the gifted creator of Chandigarh's Rock Garden. Nek Chand, however, prefers to call it an Abode of the Gods, as each of his creations "has an eternal life".

THE INTERVIEWER AND THE CREATOR.
Amrita Pritam with Nek Chand

Amrita Pritam: Nek Chandji, I've gone round the Rock Garden of your creation in Chandigarh—I should say I've seen for myself your "Magnificent Obsession". Now I'd like to hear more about it from your own lips

Nek Chand: The first thing I'd like to get across is that the signboard, *Rock Garden,* has been put up by the Government. According to me, it's purely an Abode of the Gods.

Architect of this Abode of the Gods, pray tell me precisely how the first glimmerings had you gradually coiled up—and uncoiled!

The gods themselves must've had a hand in these apparently inexplicable processes! All I know is that, when I was a little boy, I had a positive craze for collecting ... ones and bits of rock from jungles and all sorts of God-forsaken places: shapes and forms of twigs and twines simply fascinated me and fired my imagination. I was—in course of time—lord of a mighty array. The only snag was: I hadn't an inch of land where I could get down to carving my kingdom. Not knowing what to do, I began flinging them back, one by one, wherever I found a fitting final resting-place to put them—with whatever artistry I had in me to bequeath and bestow.

So, until you found the right place to plant your dreams, the rugged wildernesses not only kept watch over your unbounded bounty but kept replenishing it with its own offferings...

Exactly! That's how it turned out to be. For, when I came of age and had been through the grind as a Road Inspector in the PWD, I'd decided to keep my store in this niche: far from the reach of the madding crowd and in the no-man's land around. So I began to find the right setting for each piece in my collection, as my fancy took me.

In other words, you began laying the foundations for what's shaped out to be the Abode of the Gods ..

I did. But not without the fear deep down that, when the Government's minions would strut around on inspection, they might well look over the humps and the bends and raise routine objections. What would I do then? That was what kept gnawing at my insides. How would I confront the danger? All I could do in time was come to terms with myself. "If the worst comes to the worst," I thought, "I'll knock off everything in all directions into the ditches and onto Nature's own dumps around, that's all."

You'd have sunk underground your visions of the skies. Would you have? Some courage that! Nek Chandji, I'd heard of man being created out of bits and pieces of the gods' own images, not out of the reflects of man. That's New History you've been the architect of, isn't it?

The gods themselves have written this phase of the History of Creation. I consider myself a mere medium...

Well, I'd had more than my share of hard times. I remember the days when I used to go out at dusk, after the day's work, to collect cup-pieces and rags from tailors' shops and cycle with stuffed sacks back to this place. Of course, I never had any problem in piling up empty PWD canisters and cans. As for whatever else I needed, good Lord, I had to go looking over fairgrounds after the fairs had wound up and the people had gone back. Broken glass-bangles filled my next lot of sacks. The same way, I was always on the go for whatever junk I could lay my hands on from the backyards of both humble and posh eating-places. Broken crockery, fused wires, bulbs and tubes—I'd add, on and on, to my bizarre collection. And how could I ever afford to go and buy even a grain of cement! So off I was on wheels, up and down

NEK CHAND in his Abode of the Gods

— SUKHWANT

factories that built mains and pipes. I'd sweep up sprays and squirts of this absolutely indispensable adhesive for my purpose. All was grist to my mill ..

This marvellous kingdom carved out of the dust and the ashes really of Punjab thus became the Eighth Wonder, but with this distinct difference: earlier, artists from different countries chiselled and carved and sculpted their works from hewn marble and

I had a positive craze for collecting stones and bits of rock from jungles—shapes and forms of twigs and twine simply fascinated me and fired my imagination. I was, in course of time, lord of a mighty array.

REMARKABLE ROCK GARDEN

— SUKHWANT

My salutations to the medium! The Shivalik Ranges have, from the very beginning, been the sacred places of Shiva worship. Village after village, township after township, all along bear names of the gods from antiquity. Just as Parvati made Ganesh out of her own sweat and slough, it seems that the various facets of Shiva worship from far-flung places have been brought together and wrought to perfection here by you in your image. By the way, where do you hail from?

Beriya Kalan, a little hamlet in Gurdaspur district... That's where I was born.

So you've simply been carrying out the Will and the Design of the gods in your unrivalled field of art, have you?

Believe it or not, that's just how it is. I learnt neither to sketch, nor to draw, nor to design, nor have I ever attempted to do so on my own. Haven't the gods then held my hand and taken me on to accomplish whatever mission I had in life?

rock, but you fashioned your marvel from junk strewn around. How proud must Punjab be of a son of the soil like you!

I know nothing about that part of it. All I'm grateful for is that Punjab's allocated these six acres to my gods! When for twelve long years I went through my tryst with destiny, you've no idea of the nightmares I had of finding my handiwork bulldozed one dark day. It was only when M.S. Randhawa chanced to pass through this area that a ray of light came my way. I found his sportive strong hand on my back. That gave me the encouragement I needed. Each bit of rock here is a gem, each stone and pebble a jewel in my eyes .. And then, when T.N. Chaturvedi was appointed Chief Commissioner, he awarded me, not only in my eyes the colossal sum of Rs 5,000 and sanction for whatever quantity of cement I needed as raw material, but also placed at my disposal as many labourers as I needed at Government expense! So I went rollicking on for a while—

→

that is, until the new chief was posted here With a wave of his iron fist, he cried halt Why all this expense?. Why this undue drain on the State Treasury?

To cut a long story short, for three whole years, not a little finger could I raise. But, thank the stars above, since the next officer Banerjee's transfer here, I've been trying to make up for time lost What's more, not only have another six acres been allocated for the expansion of my vision, but the extension of my service, too, has come through—after the year of superannuation I've now reached

I hear you've had an invitation from France to do something along the same lines there...

Sure But how could I be so sacrilegious as to abandon the Abode of my own Gods? No. Let me elaborate my point it really is for the gods of the whole wide world I've not, as far as my perspective goes, omitted any. France undertook to shoot a film of it all I flew out for three months. Would you believe it, if I told you, that all the cargo I carried consisted of 500 dolls made out of bangles?

Coming back to your question: No, I can't imagine tearing myself away from my roots for any length of time beyond what's gone

In recognition of your incomparable output, France must've given you a real good morale boost, I'm sure.

What stumped me was that I was not, to begin with, permitted to take off at all! It was after a protracted tug-of-war of sorts that issues were settled through some Cultural Exchange Project I was allowed the three months I've mentioned before, for no question of any money arose on this side. On the other hand, I was, in any case, not prepared to accept any offer of theirs

Chandigarh is a beautiful city. But didn't it strike you as ironical that, at one stage, a French architect should've been commissioned by our Government to build it and, at another, the Artisan of the Gods should've been led to play hide-and-seek with the Government over such an Abode!.

He was commissioned by the Government: I by my gods!

Leaning towards your artistic sensibilities, could you reckon your experiment with this new six-acre plot as any different from the previous one?

Absolutely. I don't permit anyone to visit this site until the piece I've in hand has been executed to my satisfaction. I've laid aside my principle just this once—for you I'm creating a series of serrated waterfalls as appropriate backdrops and, for each, a specific atmosphere. For instance, this first portion contains both their pool and their *sanctum sanctorum*

Shall we say for their free play and relaxation?

Sure. Because, right here by the side of this hill-stream, I'm designing an open-air amphitheatre Just as in Phase One of my earlier work, the evolution of the ethos has an agrarian base and bias.

Punjabi culture comes alive there. Village belles with water-jars on their heads and brides alighting from palanquins: such cameos are indeed pulsating delights. Would you care to share a secret? Did you ever dream of their having come to life: with breath to them?

Good Lord, I could never conceive of them otherwise! They've far more—an eternal life. Should you now, with deep concentration, look at any one, you'd even discover channels of communication opening out!

Nek Chandji, out of abject despair and sorrow, Khalil Gibran once said somewhere: Let's talk of that humanity that has, after having created the human race, become barren *There's a truth in what he's said. As true is it that, in certain chosen centuries, such a one is born as makes the barren womb of humanity so fertile again that the gods, too, can be given birth to By your superior will, have you not shown just how breath can be breathed into dust?* ■

Those Exquisite Handicrafts

Balvinder argues that the decline of Indian craftsmen cannot be stemmed unless a respectable home market is created for their products and stern steps are taken to eliminate the middleman, who still provides raw material to the craftsmen, sells their goods and takes the lion's share for his 'services'.

OUR period is of economic enterprise, unlimited competition and unrestrained individualism, remarked T S Eliot But is this the acme of human "progress"? "Progress", fuelled by reckless industrialisation, has led to the extinction of many handicraft traditions which have been significant links in the cultural development of societies throughout the ages

The situation in Punjab (like in other Indian States) is not very different Many of its traditional crafts (like *Phulkari* embroidery work) are dying Another popular Punjabi tradition of embroidery, *Kasida,* has acquired a miniature format Punjabi village women make interesting folk motifs, in needlework, on a square or rectangular piece of *dasuti* cloth of small size. These are framed in glass and displayed on the walls of houses, along with framed high-school certificates and other photographs

While interviewing a few village women of Malwa (Punjab), I found that, for most of them, *Kasida* is a sheer waste of time and money It is restricted to young girls of marriageable age who are supposed to know everything, from cooking to housekeeping to *Kasida*

However, there *are* exceptions During a recent visit to Hoshiarpur and Amritsar, I found that both cities are unique in having maintained the centuries-old traditions of wood-carving, inlay work and ivory-and-bone carving

Long ago, the Ramgarhia and Dhiman families of a small village, Bassi Ghulam Hassan (on the outskirts of Hoshiarpur), used to make musical instruments It was at that time that ivory inlay work began with a view to decorating musical instruments. Now the inlay work is done by more than 50 families in various villages around Hoshiarpur Some craftsmen have settled in the city and also export their products

Picture-frames, furniture, boxes and walking-sticks are made of the locally available *tahli* (sheesham) wood and the inlay work is done meticulously with white plastic instead of ivory Ivory, being both expensive (between Rs 1,500 and Rs 2,000 a kilogramme) and hard to work with, was replaced by white plastic some two decades ago Apart from plastic, materials like bone, brass, copper and coloured wood are also used

Similarly, Amritsar's age-old tradition of ivory-carving is well preserved and earns a lot of respect and foreign exchange from people in the West Craftsmen still use crude, old-fashioned tools to produce exquisite powder-boxes, figurines of various gods, birds and animals, chessmen and chessboards, cuff-links, combs, bangles, ear-rings, brooches, book-marks, lampshades and so on Camel bone and sandalwood are also used to carve out decorative and other utility objects

Earnings (mostly in foreign exchange) from the present-day handicraft traditions of Punjab are increasing rapidly. Yet Punjabi craftsmen are fast becoming socially alienated and their numbers are decreasing.

Why is this so? The reason, to my mind, is that handicrafts, which have decorative as well as utilitarian value, are being given, of late, too much aesthetic importance by enthusiastic penpushers while their social significance is being ignored

Though the Government does protect and promote traditional handicrafts through national and State agencies, the decline of Indian craftsmen cannot be stemmed unless a respectable home market is created for their products and stern steps are taken to eliminate the middleman, who still provides raw material to the craftsmen, sells their goods and takes the lion's share for his "services"

Virgil's famous saying, *So do you bees make honey not for yourself,* seems to be relevant to present-day Indian handicraftsmen, who make things mostly for the West. ■

In The Field Of Contemporary Indian Art

S.S. Bhatti on the contribution of those who have rewritten Punjab's ethos in a stirring visual language.

SOME of India's most outstanding contemporary artists—painters, sculptors, muralists, print-makers, draughtsmen, photographers and graphic designers—have hailed from the State of Punjab. Indeed, it is difficult to imagine the world of contemporary Indian art without Amrita Sher-Gil, Dhanraj Bhagat and Satish Gujral, to name just a few.

Along with Gaganendranath Tagore, Rabindranath Tagore and Jamini Roy, Amrita Sher-Gil was the pioneer of radicalism in Indian art. She brought about a profound synthesis of the more fundamental and enduring elements in Western and Indian Painting. Her work gave a much-needed impetus to the modern art movement in the country and helped put India on the art map of the world.

Satish Gujral's murals and collages also possess a distinct monumental character, and never fail to impress.

Then S.G. Thakur Singh, Harkishan Lal and Paramjeet Singh rank among the best landscape painters in the country. While Harkishan Lal's landscapes are more in the style of Van Gogh's paintings,Paramjit Singh has evolved a form of expressionism which has a visionary slant.

In this genre, the work of E.K Raj also holds great promise.

Krishan Khanna, Kanwal Krishna, Pran Nath Mago, Avinash Chandra, Balraj Khanna, K.C. Aryan, Rameshwar Broota, Sohan Qadri and Jaswant Singh are other accomplished painters. The work of Sobha Singh, the painter of Punjab's love legends, is significant for its technical virtuosity and populist appeal. Kirpal Singh has rewritten Punjab's valour-filled history in a stirring visual language. Mehar Singh, Amar Singh and G.S Bansal are noted portrait-painters.

Among the younger painters, Ranbir Kaleka displays consummate skill. His photo-montage paintings convincingly parody the terse efficiency of modern gadgets. Prem Singh's work is a happy blend of craft and creativity. His faceless women appear on the threshold of a new awareness of personal identity, individuality and liberty

Other notable painters in this group are Harjeet Purewal, Jodh Singh, Malkit Singh, Balvinder Singh, J.S. Garcha, Nirmal Singh, Ajit Singh Jabbal, Sukhdev S. Dail, Harjeet Kulhar and Surjit Kaur

Modern Indian sculpture has been tremendously enriched by the unusual contribution of Dhanraj Bhagat, India's Henry Moore. His work expands India's unique sculptural traditions, underscoring an acute sense of awareness, exultation and pride in their perennial richness. He has rediscovered in the flowing forms of his sculpted figures such music as has always been present in all great Indian sculpture. Above all, he has laid bare the intrinsic nobility of the human spirit through his devout preoccupation with man caught in his complex, if somewhat disillusioning, relationship with God, eternity and himself.

The work of Shiv Singh belongs to the same class for which standards of excellence have been set by sculptors of the calibre of Dhanraj Bhagat. But Shiv's sculptural aesthetics and idiom are singularly his own. His metal sculptures are characterised by fluid grace, lightness, poise and elegance. He uncovers the musical element in his work by the use of sequential as well as repetitive rhythm The power of his work derives from the creative energy that he infuses in his sculptures, deploying high technical skill and aesthetic sophistication

Avtarjeet S. Dhanjal, who usually works in aluminium, has also evolved a strong personal style

Among the other well-known Punjabi sculptors are Amarnath Sehgal, S L. Prashar, Balbir Katt, Avtar Singh and S.S. Vohra.

Print-making in India has found in Jagmohan Chopra an impassioned and untiring crusader. He is tenacious in the defence of his choice of graphics as a potential medium of creative expression. He adds that graphics make for sharing of experiences through "group activity" and that it is by far the most democratic of present-day art-forms Chopra's graphics are bold, rugged and solid. His extraordinary technical skill lends a charming loveliness to his prints. Two of his most gifted students, both devout print-makers, are Anupam Sud and Paramjit Singh.

Anupam Sud is perhaps one of the most versatile and gifted artists of Punjab. She paints, prints, draws and sculpts with equal facility She has a mastery of the human figure and repeatedly uses it to satirise the prevailing socio-political hypocrisy. Paramjit Singh has a penchant for silk-screen techniques and employs it in the pursuit of technical and creative excellence.

Tarlochan Oberoi has also used silk-screen printing for mystico-spiritual themes with great success .

Drawing, which is usually forsaken by many in their misplaced ambition to become instant painters, is being pursued as a cult with a near fanatic zeal by Gurcharan Singh. His pen-and-ink drawings are embodiments of immaculate draughtsmanship, amazing patience and inexhaustible loving care of which few artists are capable Expressionist drawings become transformed into weird visions in the hands of Satwant Singh.

Surjeet Singh, Brij and Prabhinder Lall are other noteworthy draughtsmen.

Creative photography has come to blossom in Yog Joy's poetic sensibility. He transforms the camera lens into a "thinking eye"—an eye that thinks at the speed of light to capture a fleeting moment of significant experience in the stillness of eternity!

The genius of Raghu Rai and S.Paul is too well known to need any elaboration.

Among the younger photographers, the work of Dev Inder and Vijay Ozo is sensitive, serious and earnest.

Suresh Sharma and Uttam Chand have also made valuable contributions to architectural photography

Sudarshan Dheer, a leading graphic designer of the country, deserves special mention. Designer of the Hindustan Petroleum symbol and the corporate identity for Kissan products, Dheer has demonstrated that creativity can be pursued even as an object of utility without detriment to its aesthetic prerogative.

Art activity in Punjab has found its nucleus in Chandigarh, which has come to stay as the cultural capital of Haryana, Himachal Pradesh, Punjab, Jammu and Kashmir Not only has Punjab produced so many gifted artists but it has also been the first to hold (in 1980) a six-week International Sculpture Symposium in Patiala. The first one of its kind in this part of the Third World, the symposium was attended by Karl Prantle (Austria), Paul Schneider (West Germany), Hiroshi Mikami (Japan), Peter Fink (Czechoslovakia), K. Kunhiraman (Kerala), Nand Gopal (Madras), Avtar Singh (Amritsar), Balbir Katt (Banaras), Harbhajan Sandhu (Patiala), Vipin Jain (Nawan Shabar) and Khajooria (Jammu).

In the years to come, art activity in Punjab is going to be intensified to nurture more and more native talent—with its characteristic vim, verve and vigour—for enriching the vast canvas of contemporary Indian art ■

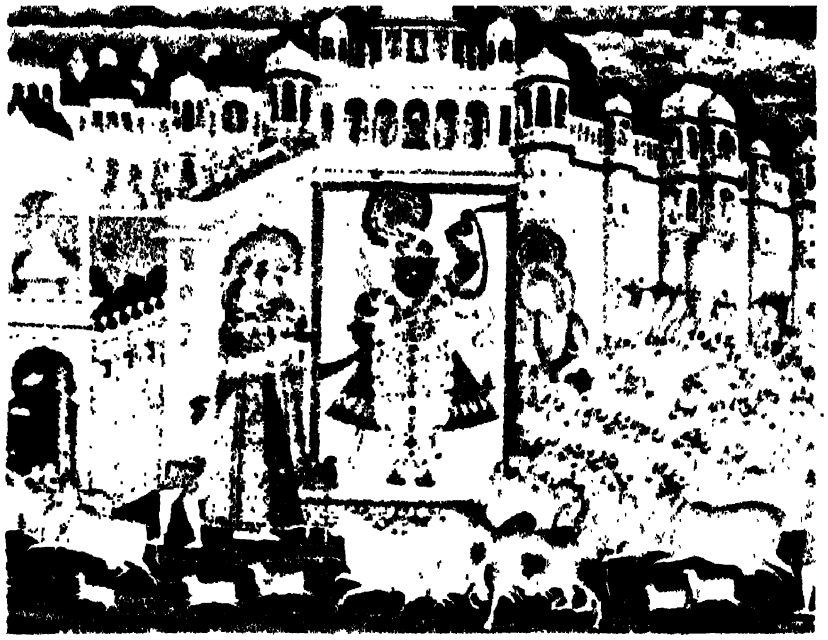
Art

It is unfortunate, yet true, that we Indians learn to appreciate our wealth of art treasures only after they have been rediscovered by the Westerners. The pichhavais of Rajasthan are no exception. And, following worldwide acclaim, which came their way quite by accident in 1969, there is a growing demand for these paintings, especially in the West, says Praveen Gupta.



WHEN ART AND RELIGION MEET. Pichhovai paintings, an art of Nathdwara, Rajasthan, were used traditionally in the temple.

PICHHAVAIS

A Growing Market In The West

A DREAM OF COLOUR AND REFINEMENT The versatile painter B G. Sharma, who inherited the skills of his forefathers, has successfully fused the minute details of the miniature style on his pichhavais He attributes the popularity of these paintings abroad to the activities of ISKCON and the Hare Krishna movement Eight of his pichhavais grace the ISKCON centre at Dallas, Texas And his works were also displayed at the Festival of India, held in Britain last year

PICHHAVAI, an obscure art of Nathdwara in Rajasthan, gained worldwide popularity by accident in 1969 when some of these superb paintings reached the Karl Mann Collection in New York

Gajendra Kumar Singh, a well known art dealer of Udaipur, attributes the sudden upsurge in demand for pichhavais to Mr Mann's purchase of 250 antique pieces from Nathdwara in 1969 and the subsequent publication of the book by Robert Skelton, the keeper of the Indian Section of the Victoria and Albert Museum, London "This played a big role in stimulating the art circles in the West," says Singh. His son, Vardhani Kumar says, "I was the first one to get pichhavais painted on a commercial basis in 1972" Today he has a market all over the US, West Germany, Spain, France and Italy. He is inundated with demands for "antique finish" pichhavais since genuine antiques are no longer available.

Pichhavai—literally "something at the back"—is a product of the Vallabhacharya sect to which the Shrinathji temple at Nathdwara belongs Although it is still practised at Nathdwara, neighbouring Udaipur, the more popular tourist resort, has emerged as the main centre of the art. It has today no less than 150 pichhavai painters catering to diverse customers at home and abroad. The prices vary according to the material and the workmanship Moreover, the paintings are taking on a "secular hue", being no longer confined to the traditional ritual.

Nathdwara, where it all began, was an insignificant village until 1671. It came into prominence with the installation of an idol of Shrinathji in that year. The Pushtimarg sect to which this deity belongs has a tradition wherein the shrine, which houses the image, is decorated with cloth hangings. They form a backdrop to image. Their motifs vary according to the ceremonies for which they are intended and they are done in sets so that every item in the decoration of the shrine is appropriate for the occasion.

Thus the pichhavais, which provide a backdrop or a kind of textile "stage set", are painted with scenes showing worship within the shrine or events in Sri Krishna's life as an incarnation of Vishnu. Not all the episodes depicted in the pichhavais are derived from the *Bhagavata Purana;* many of them are drawn from literature or the epics. The subjects form a frequent and necessary part of Vallabhachari ritual. "This ritual is more elaborate than in other Hindu temples. It follows a set daily pattern which is modified in conformity with various festivals that take place throughout the year," says Robert Skelton in *Rajasthan Temple Hangings of the Krishna Cult.* Twentyfour of these festivals are of special importance.

Some of the popular themes are: Sarat Purnima (the autumn full moon), Varsha (the rainy season), Dana Lila (the demanding of toll), Rass Lila (the festive dance), Annakut (the mountain of food), Gopasthami (the festival of cattle), Jal Vihar (water sports) and Dasi Ghar Milan (meeting in a servant girl's house). Earlier, after the ritual worship, most of these paintings were consigned to the waters. Some of them remained in the possession of the temple "Gosains". Eventually some of these were acquired by Mr Mann.

B.G. Sharma, the versatile painter originally from Nathdwara, who inherited the skills of his forefathers, has successfully fused the minute details of the miniature style on his pichhavais He attributes the popularity of pichhavais abroad to the activities of ISKCON and the Hare Krishna movement. Eight large-sized pichhavais done by him are on display at the ISKCON centre at Dallas, Texas The Belgian and French centres also have his works. His paintings were also displayed at the Festival of India recently Commenting on the artist's work, Francis Brunel, an internationally known authority on Rajasthan says "What a dream of delicate colours and of exquisite refinements are the miniatures of B.G. Sharma!"

However, Majidbhai, an art dealer who has clients in France and Belgium says "Doing Mughal miniatures in the pichhavai style is merely fulfilling exigencies of demand" Majid, a diploma-holder in Fine Arts from Shantiniketan, is also a recipient of a Senior Fellowship of the Union Government for his work on Batik. "Although we *do* use earth colours, there has also been an increasing use of chemical colours. But traditional brushes made from squirrels' tails are no longer used," says Majid He fears that any attempt at popularising pichhavai by means of screen-printing may kill the art.

The cost of a pichhavai ranges widely. "A hurriedly done and poorly executed pichhavai like the ones done by most city painters," as Mahavir Chand Dhadda, an art dealer puts it, "would fetch only Rs 20 or Rs 30." On the other hand, a pichhavai done by Sharma with 24 carat gold foil work may cost upto Rs 40,000 and would take eight months to a year to complete. Normally, cotton fabric is used since silk is not only costlier but more difficult to colour.

"Unlike the other provincial Rajasthani painting styles which have virtually vanished with the disappearance of the ruling nobility who patronised them—the Nathdwara pichhavai style exists because people want such paintings and they are given what they want," says B.G. Sharma. A modern pichhavai has many aspects: an old Gujarati couple may look for themes the *Bhagavata Purana* while the younger generation may seek something "artistic"; serious collectors in India and abroad look for perfection... There is a market for each one of them at Udaipur.

VISION OF COLOUR AND BEAUTY A jumble of thorny and soft corals Coral reefs have, for centuries, evoked conflicting emotions

CORALS

Gems From The Sea

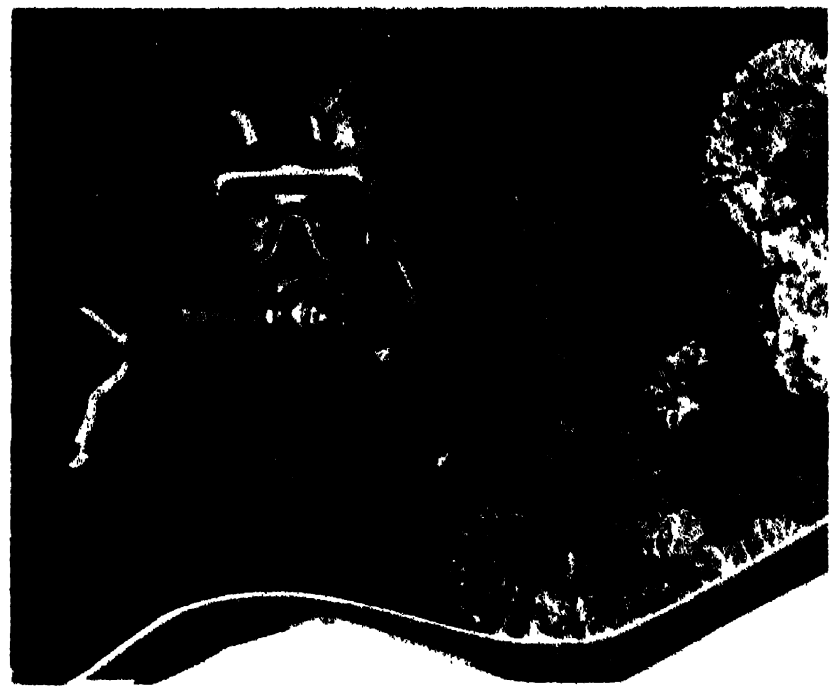
Shyamala Mahadevan traces the biological history and the commercial value of corals. Apart from being precious gems they are extremely valuable for zinc and copper extracts and the oil and gas found in the pores of the reefs.

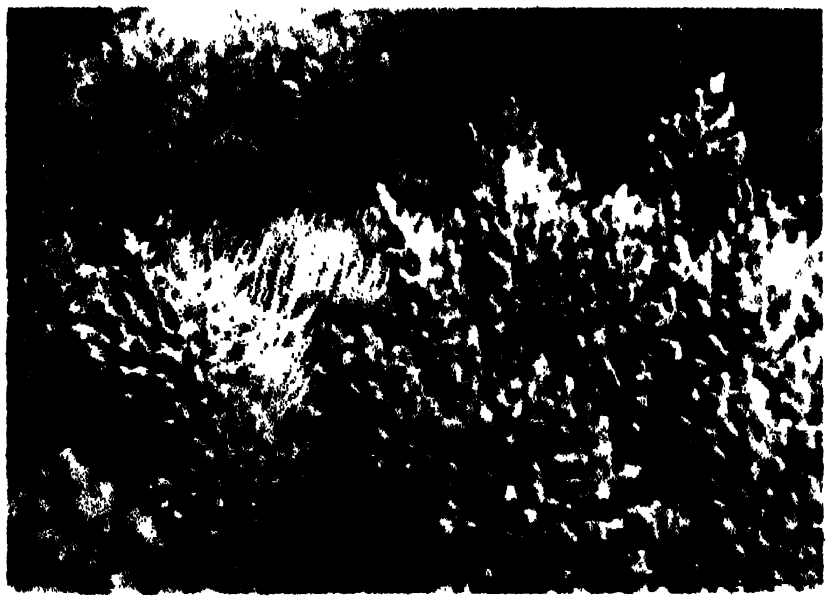
THE coral, like the pearl,has for long been one of the most precious gems known to mankind The very mention of a coral-reef has, for centuries, evoked conflicting emotional responses from mariners, the coral conjuring up a vision of colour and beauty and the reef that of apprehension.

Corallium nobile, a Latin term came to imply all sedentary creatures growing on the reef in the ocean However, the coral reefs are, in fact, only masses of carbonate of lime, arising from the sea floor with the accumulation of the skeletons of sea animals each performing the function of absorbing the minerals from sea water, processing and then secreting them as calcium carbonate deposits on their skeleton A reef is thus formed—sea creatures like clams and tube worms contributing their molluscean skeleton as well The whole structure is a complex set up, set on a fragile base easily influenced and affected by any environmental changes This perhaps accounts for it's limited growth the world over Also the reef formation is an exceedingly slow process taking millions of years to form, develop and attain full growth.

Looking back at the history of a reef, the young larval corals from the plankton must have settled down on firm rocks in the sea and with an abundance of feeding matter to feed on, the whole process must have developed from this small beginning into wide spread and well-established colonies. However, the conditions should be congenial for a healthy growth of the reef-water, optimum temperature, the right amount of light and adequate food supply being imperative for their very survival Though they live and grow from low tide down to 50 metres, coral reefs are normally located nearer land Being delicate, these are unable to withstand exposure to air and sunlight and therefore not found above low tide

The temperature also influences the distribution of reefs It has been noticed that the





A DIVERS' PARADISE Corals may be soft or stony and of varied colours, shapes and sizes Left The reefs are the natural habitat for a large variety of animal and plant life and also breeding and sheltering spots for fish and other fauna

and algae. There are different types of reefs and corals. In fact, corals are responsible for the formation of reefs, the enormous solid structures, which more or less determine the environment and the habitat, vastly influencing the organisms living there. As in land, where the nature of flora and fauna is largely determined by different environmental features such as soil, rock, water and the climate, in the sea also the whole habitat is influenced by temperature, depth, water current and the nature of the sea-bed

Coral is a general term, loosely applied to several groups of invertebrates belonging to the lowly group of marine fauna. A coral formation is a colony of billions of polyps, reefs in the continent are found in the Mediterranean sea as against the northern waters of cooler currents There are extensive reefs in the Caribbean sea though the maximum concentration is in the eastern Indian Ocean, Mediterranean Ocean and the Pacific Ocean, often miles in extent In India they are found in the Arabian sea along the coast of Saurashtra and the islands of Laccadive and Minicoy besides the Gulf of Mannar at the confluence of the seas. However, the Pacific is said to be the richest field for coral reefs at different stages of formation, growth and decay.

The corals themselves are either soft or stony in structure besides being of varied colours, shapes and sizes It is the calcium content that makes the coral hard In depths from 5 to 35 metres, corals may be green purple, brown or yellow In deep seas, small solitary corals are found at depths of more than 50 metres and are usually white or grey The proverbial red coloured corals are pro-

→

ducts of the Mediterranean belt The equally popular orange and flaming yellow corals are found all over, though blue and black corals are not uncommon. Corals can be as small as beads and as large as thumbs Corals lend themselves to different shapes spherical, cylindrical, spindle-like, thimble like, tubular and so on

Attempts have been made to discover the composition of the reefs and that of their base The underlying rocks have been found to be volcanic in origin and the material above consists entirely of dead reef corals This has led to the conclusion that corals at one time, perhaps 50 million years ago, lived in the shallow waters of the sea Another explanation for this phenomenon is that the foundation of some coral formations might have been the result of volcanic eruptions under the sea and the reef building corals must have thrived on the sub marine ridges

Coral reefs appear to be predominantly an animal community but are not really so The reefs are not made entirely of corals either Many of the marine creatures, sea animals and plants play an important role in their formation, structure and growth Even the microscopic algae which are almost a part of the reef, make a significant contribution to the colony The tiny one celled algae seem to live together in permanent partnership, though the exact nature of their kinship is not known.

Their interdependence is not altogether connected to food Recent research has shown that small amounts of material passed out from the algae enter the tissues of the corals, even though the majority of corals rely on the plankton animals for their food to which their digestive enzymes are well adopted

There are innumerable small animals, similar in structure to sea anemones inhabiting the reefs, superficially resembling each other. These are soft to the touch with no proper skeleton. Yet the coral reefs are not completely covered with only marine invertebrates Patches of coral sand are scattered around consisting of finely divided particles of dead coral skeleton

In short, the reefs provide an underwater habitat for a great variety of life which includes vertebrates, invertebrates, worms, sponges, molluscs, fish and flora, and also act as breeding sites and sheltering spots for a large number of species The relationship between them is complex but interesting. These happen to be community centres of the ocean Even free swimming species like sharks and whales use the reefs as landmarks for stop-overs during their long journeys in the high seas

Corals are carnivorous by nature When fully grown they develop a limy skeleton and multiply chiefly by budding Coral secretions assume various forms—fan-shaped, tree-shaped, mushroom-shaped and so on In one type, the colony grows like a heavily branched bush, in some the branches are longer and more delicate and in others as elaborate as the structure of the human brain.

The most fascinating form of life associated with the reefs is the group called coral fish—small, flashy, coloured fish that swarm around the reef On the reef, a coral head can be spotted with its tangle of branches providing shelter to the fish The intricate out-growths in the structure of the reef shelter a variety of life forms A coral reef literally serves the purpose of a home, providing food to organisms as well as shelter and nourishment to the plant life over a large area around it. The reefs also support a rich variety of fauna

Tropical reefs vary considerably in form. They could be fringing reef, platform reef or an atoll (an island of corals around a lagoon)

A coral reef is a delicate structure and, therefore, easily susceptible to damage and destruction. Besides human beings, it has several natural enemies. Hurricanes, storms and other natural phenomena can damage the reef Invertebrates and fish feed on the soft tissues of the corals while other organisms like molluscs bore into the coral rocks and the living reef Thus, portions of the reef tumble and collapse, parts of it get detached in the process and are carried away by the swift currents.

The most destructive among the natural foes of the reefs are the star fish This so-called "crown-of-thorn" eats into the soft tissues to the extent of erasing them altogether from many a reef in the ocean The crown-of-thorn belongs to the Sea-Cucumber family that feeds on creatures living inside the reef, thereby destroying the corals from within. Boring algae, boring sponges, Crustaceans and various types of worms also penetrate the rocky and the skeletal layers of the corals, thereby destroying the tissues

Besides these natural enemies, environmental aberrations also affect the fragile set-up of coral reefs For example, a sudden dumping of silt can damage their very existence by shutting off light and oxygen supply. Besides silts, industrial effluents, oil spill and other human factors also endanger their survival The reefs face extinction in some areas due to the rapid growth of industries and modernisation

The ruthless exploitation of marine life explains their gradual disappearance Undoubtedly, human interference is resulting in the serious deterioration of marine life and nature's treasures will soon be lost to mankind forever

ECHINODERMS are the coral's greatest enemy.

A living coral reef also has tremendous economic potential. Buried fossil reefs are targets for petroleum exploration and metal prospecting since the corals contain a small percentage of metals like zinc and copper, biogenetically extracted from the sea water. The poracity of the reefs and the characteristic curvature of the non porous, enclosing sediments make them natural reservoirs for oil and gas.

Corals also have medicinal value and have been in such use traditionally Above all, corals surpass all in colour and beauty and are still much favoured all over the world for their elegance Due to their intrinsic value as gems and their place in the environmental balance in the seas, it is high time that protective measures are taken to ensure their survival for the future.

'YOGI OF SPIN' BISH BEDI

The Bedi Effect

HOW can there be a Punjab Issue without Bish Bedi joining issue! The man whose spin made batsmen's heads swim is very much in the news right now with his pungent point of view that he *can* be a National selector and a TV commentator in the same breath. Reacting sharply to Bystander's pointed criticism in *Sportsweek* of his curious double role in our cricket, Bishan Singh Bedi says:

> *It is ridiculous to suggest that a performance made in the public for all to see should not be described faithfully by anyone, be he a selector, official or player, without any sinister motive being attributed to him. Oh, come off it, this holier-than-Pope attitude is plain naive hypocrisy. My performance as a selector is something that is behind me and whatever comments I make on particular actions on the field of play, based on my cricketing knowledge and experience, have really no bearing on it. If, say, Kapil Dev made a silly batting error, does my truthful description of it warrant the inference that I am prejudiced against him for all time? Nothing can be more ridiculous!*

Fair enough, Bish, but what if Kapil Dev now, in his turn, comes up with the argument that his performance as India captain is *behind* him at the end of the day's play and he is free to air his opinions on the performances of those *under* him once the day's last over is bowled?

A skipper or a selector—especially in a country like India where fan reaction is forged in the crucible of passion rather than reason—must at all times not only be fair but also be *seen* to be fair And fair comment can sound as fair only if made from a position that is in no way compromised

Take, for instance, the comment Bedi made in the Final Karachi Test, when Ravi Shastri was clearly lucky to survive, that "This is Shastri's day!" That was not only an innocent piece of comment but also a perfectly valid one. But, cricket fans in India being what they are, they are sure to interpret any such Bedi comment on Ravi Shastri vis-a-vis Maninder Singh! And, at a time when the left-arm spinner's spot in the India team rests between the two, it is best that a *selector* at least leaves himself open to no such interpretation by doubling as a *live* TV commentator

Bedi cites the fact that "the great Sir Donald Bradman has done it and Alec Bedser has made frequent TV appearances while being a selector". They may have gone on the air or made TV appearances but, as far as I know, these two greats of the game were never ever involved in *ball-by-ball* comment while they were selectors. It is one thing for a selector to appear on TV during a break in play, another to pass *live* comment on those men he's helped select when they are in the *actual* motion of performance

But why does Bedi have to go back to Bradman and Bedser, he has the standing example of our own Vijay Merchant trying to continue as ball-by-ball commentator *after* he became Chairman of Selectors. What a hue and cry there was when Merchant tried to do that! Why, Merchant himself found it difficult to be wholly objective, hard as he tried. So he gave up the job of commentator to retain the casting vote as Chairman of Selectors.

Bedi's point is that it was never made clear to him by our Cricket Board that, in order to be a selector, he would need to cease to be a commentator. But such things, do they need to be told, are they not to be understood? There is already a hint that our Cricket Board is not best pleased about this dual function of Bedi. In the circumstances, should Bedi not, in fairness to himself and to those he helps select, choose between the two jobs?

Bedi writes well on the game and is a perceptive commentator, too. As a media man, he has something positive to contribute to the game Why does he then want to be a selector-cum-commentator? It should be either the one or the other.

There are those who believe that Bedi became a selector only to settle an old score with Sunil Gavaskar. Those who project such a view are being blatantly unfair to the man. Outspoken Bish may be, even obtuse at times, but any scores Bedi settles he settles on the field—in the open. There is a certain directness about the man that comes out in his comment. Even the streak of blue he talks is an endearing streak of blue Like, for instance, his Australian TV comment that Sunil's batting was exciting enough to give him an orgasm or two!

There was a time when we professional writers were fond of saying that Bishan Singh Bedi opens his mouth only to put his cricket boot in it Today, Bedi is in a position to hit back and his straight-from-the-shoulder rejoinder to Bystander's comment must be interpreted as his legitimate urge to speak his mind. But, now that he's given Bystander a piece of his Sardarji mind, should Bedi himself not reconsider his position in the Idiot Box? When a 'diplomatic' selector like Vijay Merchant could not make a success of the job, can Bedi really hope to get away with it? In fact, if there is one person unsuited to being a commentator while he is a selector, it is Bish Bedi. For you can no more restrain Bish Bedi than you can restrain Raj Narain! His temperament is such that, in the very nature of things, he is bound to say something to which either player or viewer can take umbrage.

Indeed, as I see it, the time has come for the media to make some gut decisions about whom to put where Having done my last live Test commentary as far back as February 1973 and having thereafter acted as the expert in merely one Test (in 1974), I feel I have the benefit of both distance and detachment to air my views here.

If we do not want a selector to be a commentator, the same principle must be extended to those who hold *any* office in our cricket. It is noticed, for instance, that in one Test a certain gentleman is India's Team Manager and in the next Test he is a commentator! In one Test, a person is a ball-by-ball commentator, in the next he is an expert! In one Test, the man comes on the radio, in the next he is a TV commentator!

I know there are commentators abroad who have the flair to carry it off on both fronts. But, in India, it is rare to find a radio commentator successfully make the TV transition And telecommentary spoken in the radio style becomes a drag on the ear and the eye alike

It is time, therefore, that two different sets of commentators were evolved—one for TV, one for radio Only that commentator should go on TV who is able to *add* to the sum total of the visuals already there. A ball-by-ball description is *not* wanted on TV.

The last series of Tests revealed how far behind Pakistan our commentators are in this respect When the commentator is not telegenic, when he is out and out a radio man, you get the kind of *faux pas* you did when a certain radio commentator pitchforked into the Idiot Box said that a certain woman cricketer "is running up for her first delivery"! And so it went on, with her running up for her second, third and fourth delivery, until you were left wondering as to whose 'delivery' to admire—hers or his

By the same token, I don't think it is right for one to be a commentator in one Test and an expert in the next The one function is descriptive, the other analytical. And, definitely, it is not right for one who is India's Team Manager during a domestic series to be a commentator or an expert in the next Test. As Team Manager, one has access to certain information which one is bound to use, in some form or other, in one's commentary This gives the Team Manager-Commentator an unfair edge over his colleagues in the box In any case, dressing-room information is not supposed to be carried to the box. Nor selection-room information, hence the question-mark against Bedi's functioning as a commentator when he is holding sensitive selective office

The Bedi Effect, it can be deadly—on and off the field On the field, Barry Wood and Dennis Amiss will testify to the potency of the Bedi Effect Off the field, Bedi, in my view, has today a definite role to play as a media man, a role that should in no way be shackled by the embarrassment of office.

Unlike those who turn out for India today, Bedi all his playing life only thought of what he could give the game, never of what he could get out of it. He's paid dearly for this attitude. His courage in sailing against the 'vaseline' wind lost him his playing niche in England. All his life he's fought and lost Fame on the field suddenly deserted him: he became the nation's whipping-boy for that one over he bowled in Pakistan

Today, therefore, when fame as a media man is his for the taking, Bedi should make the right choice. He can be either a controversial selector or a controversial commentator, but he can't be both at once—this man we know as an enemy of the Establishment and a friend of Dom Moraes, as inheritor from Lala Amarnath of the mantle. 'The Stormy Petrel of Indian Cricket'

Make it easier for your baby to change from milk to solids...

Nestum: the baby cereal specially formulated for a gentle transition.

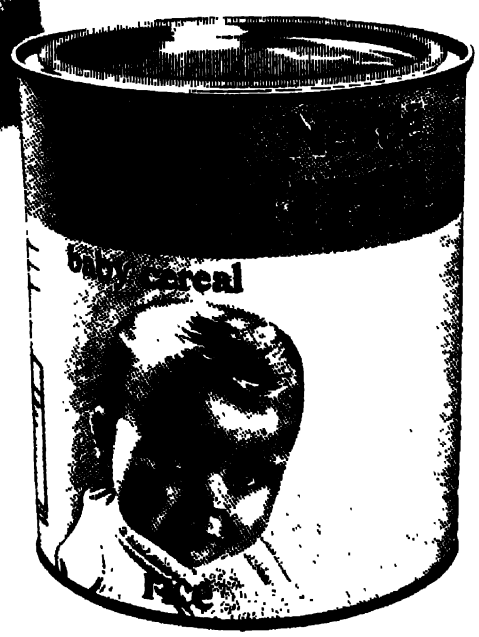
You want the very best for your baby. That's why you breast-feed him. The most nourishing and easily digestible feed you can give.

When he is about four months, he'll need solids in his diet. But his digestive system is still delicate. So he needs a cereal that's easy on his digestion. Like Nestum.

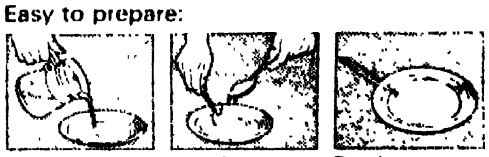
Nestum is so right as a first solid because of its special formulation. It's made from rice. And nutrition experts agree this is the easiest to digest amongst cereals as it's gluten-free.

Nutrition-conscious mothers like you say 'yes' to Nestum because it's fortified with 11 vitamins, iron and calcium—vital nutritional support for your baby. Vitamins to give a glow to his skin, a sparkle to his eyes and build baby's resistance to disease. Iron for healthy blood and calcium for strong bones and teeth.

Introducing solids in baby's diet is never a simple process. But Nestum can help you make the transition from milk to solids, gentle.



Easy to prepare:



Pour warm, pre boiled milk | Add Nestum & mix | Ready to serve

Fortified with iron and 11 vitamins

Nestum®
rice

JARGON

Life is getting tough, complex. Communicating is a hassle. More and more, we find our traditional language inadequate in putting across our views and emotions quickly and effectively. We feel the need for specialist words. Jargon is not a dirty word when used to show up and not to show off. So trade off the old for the new and follow through with confidence. Get on to the wavelength. The spin-offs are substantial. Think Concorde, not bullock carts. Have fun.

Let us see if you are with it. Straight through from A to Z. For each word, score 1 if you are near and 2 if you are there.

A to G	**H to N**
Adversary System	Hassle
Black Box	Interface
Cybernetics	Jargon
Downside Risk	Key
Eclectic	Lateral Thinking
Flip Flop	Meta System
Gel	Negative Feedback
O to T	**U to Z**
Opportunity Cost	Uptight
Peer Group	Value Added
Quantum Leap	Window
Rip Off	X Theory
Semantics	Y Theory
Through Put	Zoot Suit

PS: If you want to catch up on Jargon, read any good technical magazine. Or get Edward De Bono's "Word Power". Only problem is this book is so good that it is always out of print. So many people want to read it that only a few get to read it. A typical Catch-22 situation

Explanations

A to G

Adversary System. A negative system of conflict, often eyeball to eyeball. In proving the other man wrong, you prove yourself right.

Black Box: You know what goes in, what comes out. But you do not know what is happening inside.

Cybernetics. The study of dynamic systems, given a voice and form by Norbert Wiener. Effects are fed back to you, you analyse the causes, checks and corrections are effected and you do it right this time. All this may take a split-second, or years, depending on the action.

Downside Risk: The indirect risk involved in a situation where you are primarily looking at the gains.

Eclectic: Not intellectually hide-bound. Picking from different sources. The downside-risk is being called a dilletante.

Flip Flop: A sudden move from one stable state to another, like a swift, inexplicable batting collapse or a sudden corporate disaster.

Gel: Not so much like in jelly. Rather to evolve into a definite form, to come together in a picture you now understand. Friendships gel

H to N

Hassle: Not just bother. Rather a system which tends to defeat the individual's effort; often hurdles placed so as not to overburden the system.

Interface: Once again, relating less to individuals, more to systems. Even though the Personnel Manager may be negotiating with the Union leader, the interface is between Management and Labour.

Jargon. Specialist words and phrases, communicative rather than just descriptive. Time saving. But use carefully, particularly when recipient is not expected to be on your wavelength.

Key. A trigger, often knowledge, which releases something that has been set up in advance. Look at it this way, a key prevents all but those who have the know-how from entering.

Lateral Thinking. Dr Edward De Bono's brilliant formalisation in 1966. Much earlier, however, the poet Rabindranath Tagore satirised a mythical King beset with the problem of not getting his bare feet dirty. Suggestions for constant sweeping and washing the Kingdom, or wrapping it up, were rejected. Until a bright boy said: Why not wrap up just your feet? Tagore named his poem "The Discovery Of Footwear".

Meta System. An external, overriding system which controls the smaller systems within it. The Mafia is a Meta System.

Negative Feedback: A check-and-balance system which is meant to regulate, by feeding back facts. A thermostat or, sometimes, the Church works on this principle.

O to T

Opportunity Cost: A supplement to the direct cost of a product, process or project, O-C looks at the cost of making it or setting it up, in preference to other alternatives. Essential in today's situation.

Peer Group: A segment drawn from the body to which the individual belongs, rather than someone from a higher or lower rank, used in assessing you, is your Peer Group.

Quantum Leap: When the increase is not gradual but in definite steps. A winning team goes ahead by goals and not ¾ goals or ⅞ goals. From argument you proceed to hitting someone. You have taken a Quantum Leap into a different ball-game.

Rip-Off: A profiteering concept based on "take what you can get away with", it exploits a buyer's willingness to put a special value to goods or services due to shortage or heightened need. A premium cashed in is a rip-off; a tinge of unfairness seems to be involved.

Semantics. A form of playing with word meanings. For instance, in using a word only in its partial sense to establish a specific perception or act. Love-making is not only sex, though we use it as such. We swing weightlessly between Love and Death is an example of semantic jugglery.

Through-Put: The quantum of linear movement or activity in a system. A college or a factory has a Through-Put. In an office, the number of drafts typed by its Steno-Pool makes up a large part of its T-P, but this is not indicative of the work really done or not done. Most drafts are re-drafted or destroyed.

U to Z

Uptight: Your insides are coiled up like a large spring, straining for release, not from dynamism so much as fear, tension, a feeling of injustice, acute embarrassment, so forth. It is the opposite of being cool. It is not overt, but covert mostly.

Value Added: You buy raw material and sell the finished product. Value is added by you to make this change. It is the cost-stage after bought-outs. This concept in financial decision-making is now considered vital, particularly in the West.

Window: Two steel sheets with small holes in their centres are swung in opposite directions between you and your target. You can therefore sight it for only a split second, when you have to fire away. A window is that period in time when all the factors are lined up in a way that enables you to see your objective clearly and act.

X Theory. Douglas McGregor's famous Management concept which states that everyone has to be directed, or led, or driven to be able to contribute effectively. The X Theory, which recognises very little self motivation, is anachronistic and substituted by ..

Y Theory. Which conceptualises a strong self-motivation amongst modern executives. According to it, all persons seek self-realisation in success terms in a corporate environment. All it needs thereafter is for superiors to dovetail company objectives into such personal objectives, for success and job satisfaction.

(Douglas McGregor's "The Human Side of Enterprise" is standard reading in all Company-programmes.)

Zoot Suit: A zoot-suited person is not only well dressed but overdressed and also somewhat out of fashion. The zoot-suit syndrome is noticeable amongst candidates for interviews, where things tend to be a little overdone, dress-wise. Young management trainees on the make are also often guilty.

Partha Basu

Scoring

Our Score. 44

15 to 25	Your Indifference Curve needs adjustment
26 to 40	You have reached your Take-Off point
Over 40	It's a Stand Off
Below 15	Have you been reading your Silas Marner lately?

River Waters

Continued from Page 20

for Punjab, through whose territories these rivers flow and to whom these belong.

This at once raises the question of the validity of these notifications and the allocation made to the non-riparian States of Haryana and Rajasthan. Among the basic issues to be considered are the constitutional validity of Sections 78 to 80 of the Punjab Reorganisation Act; the competence of Parliament to enact the same, ignoring the statutory powers of the States; arbitrary allotment of waters to non-riparian States, depriving the State of Punjab of its rights of full exploitation and use of its resources; the authority of the Central Government to allocate waters of State rivers to a non-successor State; the right of non-riparian States to the water of rivers outside their territories, besides the question of propriety and fairness of the decision.

Rajasthan State—to which more than 50 per cent of the available water has been allocated—is neither a successor State nor a co-riparian. It can thus have no claim to even a drop of the water of the rivers, Ravi and Beas.

Recently, a similar claim was put forward by this very State before the Narmada Water Tribunal presided over by V. Ramswami, a sitting Judge of the Supreme Court, but it was finally rejected. "The State of Rajasthan," it affirmed, "was not entitled to any portion of the waters of the Narmada on the ground that it was not a co-riparian State and no part of its territory is situated in the basin of River Narmada."

> The Tribunal thus refused to entertain the claim of Rajasthan. This very situation obtains in the present case.

The fact that in the summary of statements pertaining to the Ravi and Beas Waters (circulated at a conference of Ministers held on January 29, 1955), regarding the apportionment of 15.85 MAF of river waters, the share of Rajasthan was put at 8.00 MAF does not give it any claim to obtain waters of Punjab's rivers for all time to come. By no stretch of the imagination can this summary statement be equated with a voluntary agreement or a contract. The circumstances under which these summary statements were prepared have been recently clarified by both Dr Kanwar Sain and Dr N D. Gilati, who were then concerned with the matter at the highest level. They tell us that the note regarding the requirements of Rajasthan was prepared in a hurry on the basis of their requirements projected by Rajasthan and others, as the World Bank Team was visiting India to assess the requirements. Dr Kanwar Sain further says that the requirements of Rajasthan were exaggerated.

Section 78 of the Punjab Reorganisation Act deals with the rights and the liabilities in regard to the Bhakra and the Beas Project. It is clearly invalid for want of legislative competence, as it impinges upon the exclusive legislative domain of the States and is not concerned with the reorganisation of States or matters connected therewith. Section 78, in so far as it makes provision for allocation and distribution of the waters of the Beas River which flows through Punjab, is *ultra vires* of Article 243 of the Constitution. Section 78 being unconstitutional, the two notifications in question cannot be sustained. The matter falls under the legislative authority of the States under Entry 17 of List II of Schedule 7 of the Constitution.

Both notifications are further vitiated by the fact that the requirements of the State of Punjab were never fully and properly investigated. It must not be forgotten that it is only after fully meeting the needs of the riparian State of Punjab that any part of surplus water can be made available to another State, and that, too, on such terms as are considered beneficial to the riparian State.

With an ever-increasing area under cultivation and double cropping, the demand for water is increasing. Extensive areas depend upon tube-well irrigation, which is becoming very costly day by day, with uncertain power and diesel supply.

> There is no reason why the State of Punjab should be compelled to part with its river waters in favour of non-riparian States and compel its peasants to depend upon tube-well irrigation.

Since some of the issues involved are constitutional, they can only be gone into by the Supreme Court, not by a tribunal or a commission. As such, the suggestion made in some quarters that the dispute be referred to a tribunal under the Inter-State River Waters Dispute Act is untenable. Apart from the fact that a tribunal cannot decide constitutional issues, it would lack the jurisdiction to go into the present dispute, as the Ravi and the Beas, whose waters are in dispute, are not inter-state rivers. They belong exclusively to Punjab State. Section 3 of the Act is clear in this regard. As observed by Justice Holmes in *New Jersey vs New York* (283 US 336), "A river is more than an amenity. It is a treasure. It offers necessity of life that must be rationed among those who have power over it."

> It is only the State of Punjab whose "treasure" these rivers are.

In this situation, instead of prolonging the controversy which increases tension, true statesmanship calls for a bold and early decision. But if, for any reason, such a step is not considered expedient, the demand of the Punjabis to take the issue to the Supreme Court for judicial determination should be immediately conceded.

This will be not only a constitutional and lawful course but also a pragmatic step, as it will promote confidence in the Judiciary and save the administration from being accused of partiality. ■

In The States

Decaying Of Art

by Gautaman Bhaskaran

CALCUTTA: Calcutta's Victoria Memorial is perhaps comparable only to the Taj Mahal And so, too, the Memorial's Restoration Unit, the only one of its kind in eastern India and just about as well-equipped as the National Centre for Conservation of Cultural Property in Lucknow Yet, in all the four decades of its existence, it seems, it has never attracted the kind of attention that it should have

For, how else does one explain the utterly miserable staff strength? The Unit has one restorer and one picture and print repairer It does not even have a laboratory attendant In fact, it was only in the last year that the Victoria Memorial authorities got permission to divide the Unit into two for administrative convenience One unit looks after small and medium size oils, the other after the larger ones

Let alone the fabulous paintings rotting in the four corners of Calcutta, the Restoration Unit is in no position to look after the vast and interesting collection that the Victoria Memorial treasures The paintings at Calcutta's famous Asiatic Society are decaying not merely for want of funds but also for want of a dedicated staff Valuable oils by Robert Home and the Daniells, who painted virtually the whole of India, will soon be beyond redemption So too some works at the Bangiya Sahitya Parishad, St John's Church, Calcutta Club, Turf Club and those in private collections Outside the city, the Hazarduari Palace at Murshidabad, indeed, holds a fascinating variety of oils but in a sad state of neglect But still the Victoria Memorial looks on helplessly

The Memorial itself has 350 oils the largest number of old paintings to be found in any single institution In fact, the second largest oil painting in the world--Prince of Wales entering Jaipur in 1876, by the Russian painter Vassily Verestchagin is housed at the Victoria Memorial Another large one is Zoffany's painting of the second Mrs Warren Hastings To say that these are preserved in the most ideal of conditions would be, to put it mildly, an exaggeration

Paintings are best preserved in air conditioned galleries But Curzon, while raising the Memorial in honour of his beloved Queen, could never anticipate that such problems will trouble future administrators electric wiring is itself next to impossible in the high-ceiling galleries, let alone air-conditioning Again, excessive sunlight robs a painting of its richness The Victoria Memorial's huge windows, are now shielded to an extent by hanging venetian blinds This, however, makes the galleries all the more dark, and many an art lover is known to have complained about the inability to view properly the works of art Then there are some out-of-the way paintings which cannot be conserved Take, for example, Zoffany's *Death of a Tiger*, possibly painted at Chandernagore, near Calcutta The medium used was bitumen, which becomes darker with age, and this process cannot simply be reversed

In spite of all this, there is hope for the Restoration Unit and with it for the Memorial's and perhaps the city's precious paintings If the Unit can be sufficiently expanded, it can cater to external requirements it can also work in coordination with the Lucknow centre Later, more such units can follow, with the one in Lucknow acting as the apex body.

Recently, there has been a proposal that the Memorial's Restoration Unit can serve as a training centre, where people will be educated in the art of restoration In line with this idea, a workshop on oil painting restoration at the Victoria Memorial has been planned for later this year Lord Dunluce of the London Tate Gallery and other experts in the field are expected to participate

Currently, the Restoration Unit is doing some good work in its own small way, and has some outstanding achievements to its credit Some time ago, when the police raided a curio shop in Calcutta, the owner escaped but not before he had torn into 11 pieces a Dutch Bengal school painting of Kali The pieces were handed over to the Victoria Memorial and after nine intricate "operations", the painting was restored to its original form- in 12 months This shows how complicated and time-consuming the art of restoration is The members of the Unit say that restoration is as complicated as human surgery

No wonder, then, that before a painting is taken up for restoration, investigations are made to ascertain the age of the painting. This is not very difficult. Particular kinds of raw materials were used at particular ages and the rough age of the painting is calculated this way The exercise is useful in other ways, too For instance, if a painting has traces of glue, one ought to be careful not to disturb it, if the dry glue gets wet, it expands, damaging the painting further

After the investigations are over, the crumpled pieces of a painting, if that be the case, are straightened out through a process of vapourisation in which alcohol and water are used The segments of the canvas are joined to one another through a process of heating The painting is then cleaned part by part and retouched, also part by part, several months may pass before a painting regains its former glory

A visit to the galleries of the Victoria Memorial will reveal some of the paintings so restored The *Kos Minar* by Thomas Daniell is the most striking of the lot *Claude Martin and His Friends* by Zoffany, *Allahabad Fort* by W "Hodges and *A State Barge on the River Goomtee*, also by Thomas Daniell are oils that look as if they were executed only the other day

Soumitra Das adds:

The great marble fabric of Victoria Memorial Hall is set off by acres and acres of green and placid pools Its Italian Renaissance structure seems far removed from the muddle of this land, a few paces though it is from the ravages of the Metro Railway.

The design is suggestive of the oriental with its constellation of minarets, the lotus motif that crowns the cupolas, acanthus that support the columns of its main portal, lattice work and other smaller features because the the Regina stood for an institution cherished here. Its very marble was quarried from Makarana.

The Hall was never an ivory tower of the Raj. The Rs 1 crore and 5 lakhs that went into the building came not just from the coffers of the rich. The humble and lowly too, contributed—the native staff of the Geological Survey of India and Bank of Bengal, students of Bishop's College and the Calcutta Deaf and Dumb School, teachers and pupils of Hare School and even the children of the Loreto Day School parted with all their tuck money

Apart from being a monument to the Queen, Curzon meant the Hall to be a "National Gallery and Valhalla for the Indian Empire" The roots of its myriad exhibits are not in the Occident alone but can be traced back to the native soil Here there is a treasure trove of Indian art and manuscripts dating back to the early and late middle ages in Arabic, Persian and Urdu, original documents belonging to the British period and a fascinating garner of Bengali folk art

The richest collection is that of manuscripts In Asiatic countries, calligraphy was considered an art worthier than that of paintings The *Khushnavis* or beautiful writer, however, could take up miniature painting. But never the reverse

Consider a Quran in Arabic, an original handiwork of Aurangzeb's: one among the many striking examples, the royal copy of a book of metaphysics from Jehangir's time and five extracts from the Quran by Dara Shikuh. The lettering is in unadorned black, gold or white on a background dusted again with gold Some are sumptuously illuminated Flowers shot with gold bloom in profusion along the borders or form a *mihrab* (arch)

The Persian manuscripts are larger in number and cover a wide range of topics—history beginning from creation, travelogues, a calendar prepared for Wajid Ali Shah of Oudh, correspondence, an Arabic-Persian vocabulary (without tears) for children, and a translations of the *Upanishads*

Two volumes of *Akbarnama* and *Ain-Akbari* authored by Abul Fazl; collections of verses of the celebrated Khwaja Shamsuddin Hafiz of Shiraz and Nizami, one of the greatest Persian poets, Nalwa Daman, a romantic poem about the long-separated lovers of *Mahabharata*, translated at the behest of Akbar, and letters of Tipu Sultan with quaint illustrations of gun-toting soldiers are some of the invaluable treasures

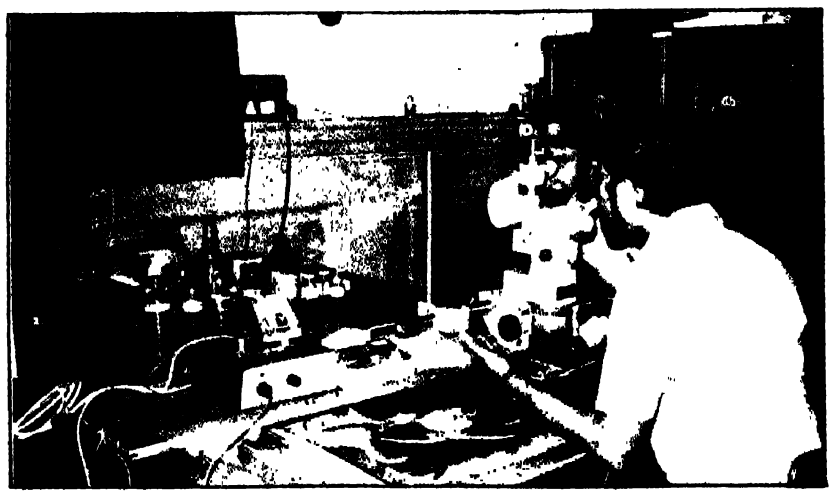
The important Urdu works are a lithographed book by Wajid Ali on the science of music and dance, the tale of Prince Bi-Nazir and Princess Badr-i-Munir, and an incomplete love story.

There is a certain delicacy and richness about the works; the often extremely beautiful jilds or bindings and excellent miniatures in every style from Persian of fluid grace to the somewhat stiff Murshidabadi keep one fascinated.

Although the Hall has few miniatures of outstanding artistic merit there are enough to illustrate every school from the days when it flourished under Mughal patronage to its degeneration into a dry and lifeless echo of the great masters

The Mughal miniatures are strictly secular and transfer to paper the kaleidoscopic scenes of the court where colours of luxurious raiment, gilding and polychromous gems ran riot They depict the whole line of emperors beginning with Tamerlane, a young but composed Akbar tries to soothe his mad elephant: in court as a sage and connoisseur, and as a lover disporting with Jodh Bai, a charming Prince Salim who grows up to be a dissipated Jehangir; a beautifully

BEFORE AND AFTER A painting from the Victoria Memorial that has been salvaged by the Restoration Unit Below *Men at work restoring a painting to its former glory*



modelled Shah Jehan; Dara Shikuh's aquiline profile; a callow Aurangzeb in a hyacinth *Jama;* the emperor with his awestruck sons; storming the massive fort of Golconda, and as an emaciated ascetic in his last days.

The finest of the series are a regal Jehangir and the lion in which the artist employs a remarkably restrained palette and the Lucullan "Jehangir Distributing Charity" aglow with gold and lapis lazuli. The delicately modelled faces and drapery reveal European influence while the linear delicacy harks back to Persia.

The Kangra school was the last and most exquisite of the Rajput school of painting of which there is but one fine example. A bevy of lotus-eyed beauties crowd around a gesticulating palmist. The supple strokes that celebrate the female form, the soft ochres, cerise and white create a subtle harmony.

To a much later date belong the miniature mica paintings of the car festival and the *firka* set of soldiers. By the Company's servants, who commissioned them, they were regarded as the acme of the picturesque

A roving David Mecutchin had culled *patas* from rural Bengal. His gift to the Hall forms a major collection. The strangely pantomimic *patas* come as scrolls or rectangles depicting Hindu deities, both classical and rural, or the magical *Chaksudana* that has links with the Egyptian cult of Osiris. A lustrous *Durgapata* in shades of Indian red with a neatly shod bile green *Asura* is simply breathtaking.

Kalighata *patas* are epitomized by a boldly executed parrot, demented Gopinis prostrating themselves before a Krishna represent 19th Century lithographs and a mauve *Sitaharan* represents Jamini Roy.

The oil paintings commissioned by well-to-do Calcuttans of the late 19th Century, "to keep up with the Joneses", arouse a good deal of curiosity. This school has yet to be christened but is tentatively known as French or Dutch Bengal though its links with *Chinsurah* are tenuous. The subjects are traditional—Kali, Durga, Jagadhatri—but the artists are well versed in Western techniques revealed by their predilection for creating atmosphere and in the modelling of features But at the same time the delineation of the diadems and rivieres is extremely traditional.

The Hall's repository of 1,110 original documents and correspondence in varied languages, European and Oriental, includes Zebunissa's letter to Aurangzeb and those written by the giants of Bengal Renaissance.

Documents, their dates ranging from 1758 to 1857, trace the British period of Indian history. A note describes the experiences of the only female survivor of the Black Hole; the Jewel Bond which led to the judicial murder of Nanda Kumar, the oath taken by Clive; the result of a Warren Hastings possessed by Erato; Burke's letter on the impeachment of the Governor-General; and, what seems unbelievable today, one of the earliest grants of land to lure people to settle in Calcutta.

The Seventh Schedule of the Constitution declares the Victoria Memorial Hall a museum of national importance. The edifice and its 64 acres of parkland combine to form a rare showpiece and tourist spot likened by many to the Taj and by the catty to the ponderous Regina herself.

Yet surprisingly it lacks even the necessary infrastructural support to maintain it. The garden has no horticulturist to tend it. Until recently there was no public agency accountable to the people for the upkeep of the structure. There is no regular gallery staff or display unit to keep it well-preserved. The crumbling Indian Museum, on the other hand, has been provided with every facility. May be its association with Queen Victoria has left the memorial out in the cold.

Rooting Out Corruption

HYDERABAD: He was the monarch of all he surveyed in Vijayawada, the commercial town of Andhra Pradesh. He hated travelling by road or rail. He preferred to fly to the State capital, mostly under fictitious names Money was no problem, he had bagfuls of it. He had a few former Ministers on his payroll.

If you think he is a prosperous businessman, you are wrong He was a small time Government servant, a sub-registrar, whose name Prabhakar Rao, has become synonymous with corruption. His *modus operandi* was simple. He registered urban sites as agricultural land, and made a neat sum in the process.

Not that the previous Governments were ignorant of his dealings. Although he was transferred more than once from Vijayawada he had the right connections to countermand each such order and he became firmly entrenched in Vijayawada

With the fall of the Congress (I) Government early this year, Rao's journey towards prosperity entered a stormy phase---he was suspended from service by the NTR Government which had vowed to wipe out corruption.

The sub-registrar was among a few other top bureaucrats, who have been shown the door by the new Government Among them are a former Commissioner of Police, Pavithran, accused of having pocketed several lakhs of rupees while heading the housing board; Muralidhar Rao, a senior IAS officer, charged with committing irregularities to the tune of Rs 9 crores, and Santhanam, another IAS officer, hauled up for awarding a contract to a private firm when he headed the Singareni collieries

While congratulating NTR on his bold steps, one wishes that he had provided the accused officials with an opportunity to explain their conduct since most of the suspensions have taken place on the basis of reports by one-man investigating committes.

For instance, enquiries reveal that Santhanam, who has been charged with showing undue favouritism to a private firm for the supply of drill bits to Singareni collieries, was only carrying out the orders of his predecessor In other words, the victim has apparently inherited the sins of his predecessor and suffered for them. The least that one could do in such circumstances, is provide an opportunity to the accused to present his version of the offence This is absolutely essential if the State bureaucracy has to keep its morale intact

Opinions differ on the feasibility of rooting out corruption from the system But certainly there is scope for containing it to the minimum. One cannot throw up one's hands in despair and console oneself with the theory that corruption is a universal phenomenon and has to be accepted as a way of life. That the Prime Minister is sold on such an idea is indeed unfortunate.

NTR has made a good beginning by his no-holds-barred attack on corruption Given the will, he is capable of proving that rooting out corruption is not an utopian task. He should pull up all the corrupt officials, but give them a reasonable chance to defend themsleves.

G.S. Reddy

Monument To A Harlot

PONDICHERRY! The very name brings before our mind's eye the cosmopolitan Auroville, the tranquil Sri Aurobindo Ashram, the lovely Botanical Gardens and the enchanting seashore with its shady park, these are only a few of the many attractions of this historically renowned place.

At the centre of the park, formerly Le Jardin du Roi (The Royal Garden), later Charles de Gaulle Square and now known as Government Square, stands a small surprise. Surprising indeed for it is a monument built not in honour of a queen or of an empress but of a harlot. The fact that Napoleon III, Emperor of France, who reigned during the later half of the 19th century was responsible for erecting this building to commemorate a 16th century harlot adds to our curiosity. The harlot belonged to Pondicherry.

Ever since the French traders had established themselves as rulers having their headquarters at Puducherri (earlier name of Pondicherry) potable water was much in demand. It became an insoluble problem. Wells were dug but they offered only salt water as the sea was too close. And the various attempts to bring drinking water from the nearby villages through canals proved in one way or another futile. The Frenchmen known as White-town-dwellers found it hazardous to quench their thirst. Emperor Napoleon III came to hear of the plight of his subjects stationed at Puducherri. The understanding monarch immediately shipped Monsieur Lamairesse, the chief engineer, to Puducherri with orders for Monsieur Bontemps, the then French Governor of Puducherri to utilise the engineering skills of Lamairesse to quench the thirst of the Frenchmen.

On reaching his destination, Lamairesse made a thorough study of the tanks and rivers in the surrounding villages, and analysed the advantages and drawbacks of laying long canals. Finally his choice fell on Aayikulam, (a tank named after Aayi, the harlot)at Muththirayar Palayam, a five km distance west of Pondicherry. He succeeded in laying a long canal starting from the bank of Aayikulam and reaching the place where the monument built later stands At last the Frenchmen had enough water to drink.

Emperor Napoleon while commending the success of the chief engineer, wished to know why the tank was named after Aayi, the harlot He was told what had happened 300 years ago

The story of Aayi takes us back to the reign of King Krishna Deva Raya (A.D. 1509-1530) of Vijayanagar. When this, physically strong and striking personality came to power, all of southern India comprising the whole of the modern Madras presidency, including the native states was under his sway and several quasi-independent chiefs were his vassals. Having his headquarters at Vijayanagar, King Krishna Deva Raya loved to inspect the southern states as and when time permitted

During one such visit, the king accompanied by his able minister Appaji, started from Vellore only to sojourn at Villanore, 8 kms west of Pondicherry, where he heard of a wealthy agriculturist living at Ozhukarai, 4 kms west of Pondicherry He had a physiological peculiarity---a thick growth of hair on his soles---and wore sandals made of gold. His name was Uiyyakunda Viswaraya Mudaliar Curiosity surged in the heart of the king He resolved that the stranger was worth a visit

It was dusk when the king and his retinue bid goodbye to Viswaraya Mudaliar On their way back to Villianur, they passed through Muththirayar Palayam.

Sandal-scented, fragrance-laden southern breezes welcomed the king and his men They soon found themselves standing in front of a house, fully illuminated with clay oil lamps. The well-polished doors of the house were kept wide open and the stairs that led to the entrance were strewn with flower petals They stood, speechless for a moment, contemplating the beauty of the house

The next moment the king's men found their Lord and his minister Appaji doing obeisance to the house, taking it for a temple They followed suit.

A passer-by who noticed their action, mustered all his courage and told the king in all humility that the place was not a temple but the abode of a woman of easy virtue named Aayi

'ordscannot describe the wrath of the king In his fury he shouted at his men to demolish the house of the harlot and in its place dig a well and a tank as penance for the insult he had brought on himself.

Aayi heard the command of the king and came rushing out of her house. She went down on her knees and cried for mercy. The king was adamant Her pleadings failed to soothe the king's anger Finally the harlot implored the king to allow her to demolish her house and build in its place the tank and the well at her own expense.

King Krishna Deva Raya, 'a man of much gentleness and generosity of character', cooled down and granted her request. Aayi did what she promised and thereby gained immortality The tank she built was named after her

Emperor Napoleon III was moved by the story.

"My Lord! We are all grateful to you for sending Monsieur Lamairesse here who gave us water He deserves a reward," wrote the Governor of Puducherri to Napoleon.

The Emperior replied "Be grateful to Aayi She deserves a monument"

NAPOLEON BUILT THIS MONUMENT *to commemorate a 16th century harlot of Pondicherry, called Aayi*

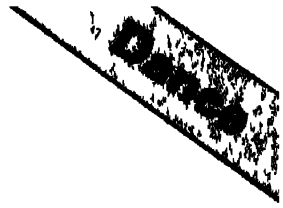
Gidda: Merry Maids' Dance

While the ever-popular Bhangra is practically synonymous with Punjab and the Sikhs,people are relatively uninformed about its feminine equivalent—the Gidda Brahm Dev outlines the nature of this lively folk dance of Punjab

A GAY WHIRL OF RHYTHM AND COLOUR EMBODIES THE ESSENCE OF GIDDA The dancers fling their arms about in joyful abandonment displaying their gorgeous dupattas to full advantage Forming two circles the outer dancers clap their hands in tune to the music and bolis while the inner ones frisk around gaily their outstretched feet in continuous motion

BRAHM DEV

BRAHM DEV



GIDDA one of the two most-loved fo dances of Punjab (the other is th Bhangra) is the exclusive domain of t womenfolk It is however by no means so and lilting even while presenting the mo delicate sentiments it is full blooded vigo ous and very appealing Powerful as well a rhythmic Gidda suits Punjab s fun lovin and buxom girls right down to the ground

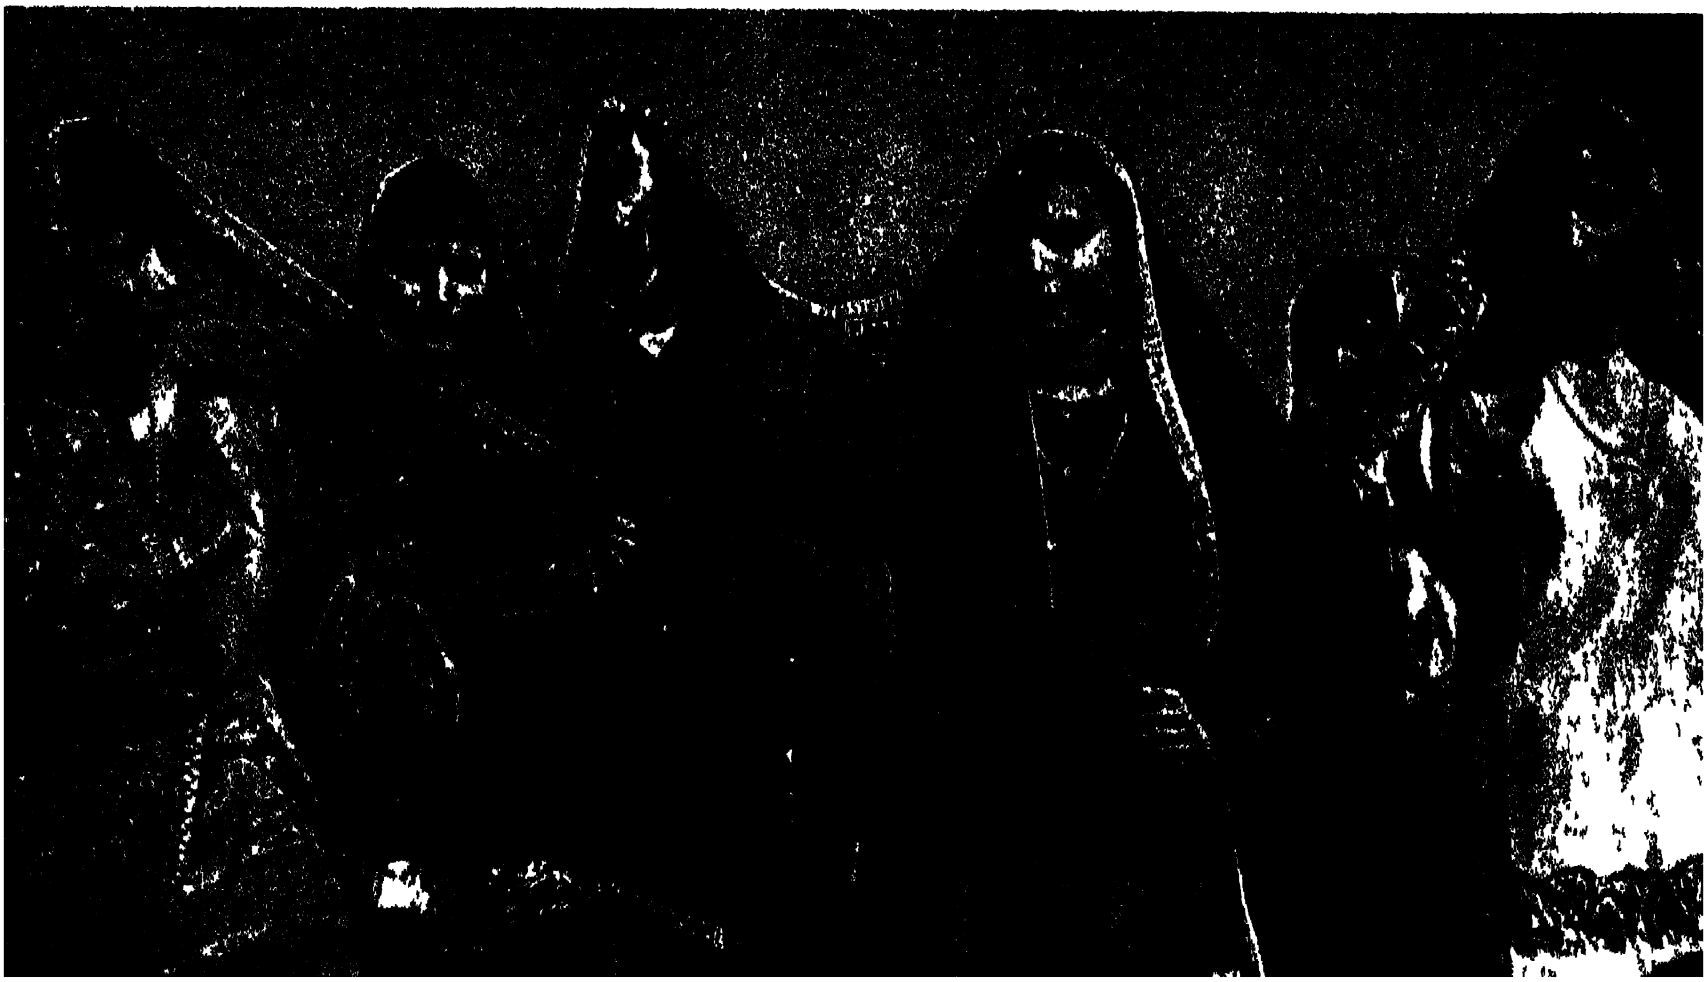
From a young maiden wrapped up in he thoughts of her lover or a newly married gi fed up with the dictates of her mother in law or a sister happy at the news of a brother forthcoming marriage Gidda provides a excellent outlet for pent up feelings an emotions

Gidda dancers express their thought through boli For example a young ma ried girl may accuse her mother in law forgetting her day as a newlywed in th form of a boli As these bolis are totall free from the restrictions of rhyming anyon can compose them in a flash of inspiration improvise on the spot

Though Gidda is danced most frequentl during the harvest season it is also a mus on ceremonial occasions such as marriage births fairs etc Its themes also encompas a wide variety o subjects ranging from th magnificent bounty of Nature to legendar battles, to the lonelines of sepa ation

Like most folk dances the essence Gidda is transmitted more through the pla ticity of movements rather than any partic lar or distinct style

Gidda is a much loved dance and ha been from time immemorial Nurtured b simple and robust hearts through the ages, continues to sparkle in its native purity Nature s amphitheatre the countryside



Perky Union Minister Vasant Sathe says:

Godmen Are Frauds

THE cacophony about Godmen in this country has reached a crescendo In the welter of discordant noises, any rational thinking about them and their so-called powers is impossible Even so, it is necessary to put matters in perspective.

The concept of God has been the most original and the oldest invention of the human mind ever since, in the process of evolution, he reached a point when he started wondering about the mysteries of nature which he could not understand, let alone solve Many such phenomena affected his life and some actually overwhelmed him. He wondered at the sun, the rains, the thunder and the fire and, eventually, deified them as Gods However, as his knowledge grew the mysteries also receded and he thought of a power sovereign to the forces of nature. the said power had to be superior and it had to have mastery over the universe with its millions of galaxies and stars among which the biggest known star, the "sun", was just a small pebble!

Also, the concept of a personal God created by man in his own image (with more faculties, as additional hands, etc) was thought to be insufficient to satisfy his imagination Hence God became a non-duelistic entity that was *nirakara* and *nirguna* (formless and without attributes)

The more man thought of this universal power, the more he realised that it lay beyond the compass of the human mind and intellect, the finest of vehicles *Naisha Tarkena Matirapaneyah*, declared the sages

Yet the inquisitive mind of man was not to be satisfied The seekers of truth ultimately came to the conclusion that, although one cannot know it by external discovery, one can realise it by an inner search Once the quest succeeds, the seeker is at peace with himself and with the world without

No one who has had this realisation has ever claimed that he is God For, even if there is a God, it would be beyond comprehension and beyond the attributes known to human minds Presuming for the sake of argument that this Supreme Power had the capacity to create and had indeed created millions of stars, millions of galaxies, millions of Milky Ways and perhaps billions of universes in the entire cosmos, to claim that you are that supreme power God, is like a sunbeam claiming that it was the "sun" itself! When the self-realised seer says *Aham Brahmasmi* (I am Brahman) or answers *Koham* by *Soham* ("Who am I", with "I am He"), what he means is that the element in him (*Atman*) is the same as the universal reality (*Paramatman*)

Our philosophical tracts and Vedanta have summarised the universal reality in one syllable *Om* (or Amen) which may be the abbreviated form of the statement *So Aham* (that I am) The seers also say that the universal energy is indivisible and that even when you deduct something from the whole, what remains is the whole. This statement is now corroborated even by science.

What then is the difference between an ordinary person and a person who has achieved realisation? While the ordinary person is lost, through ignorance, in the whirlpool of life and its struggles, the realised one develops a sense of detachment and *Sakshi Bhava* (perspective of a perceiver or observer) He is able to look at the whole world, nay the whole universe, as an outsider as it were, and like a person watching a drama or a story in the film, remains uninvolved. He is like an elder playing with the children in their games of a make-believe world (which to the children is a serious reality). This person, therefore, can laugh when the children fight over a pebble or a sweet, and like an elder, intervene and advise the children and settle the quarrel.

Such a person (one who has had the Zero Experience of the *Shunyatva*) develops a tranquil mind and is always composed. He may display disapproval or anger, but only superficially; it is like the annoyance of the parents at the wrongs of the children. The self realised person can abandon the world or life itself which is hardly relevant to him, but rather than do so, he tries to help other human beings to obtain the same realisation which gives lasting peace and happiness as also the capacity to withstand life's vicissitudes The total perspective acquired by such a person automatically makes all his activities efficient The entire earth is like a berry on the palm of his hand and the whole human race just one family No wonder he cannot identify with one man against the other

Although many of us *do* experience and express these noble sentiments, they are not natural or constantly with us We have to labour to express such feelings, more as sermons from the platform, because the next moment we tend to lose ourselves in struggles for worldly wealth and power The realised man can judge right and wrong with greater objectivity He performs the very actions which the ordinary man does but he executes them with greater efficiency and steadfast detachment He is also able to discern why a particular person is unhappy and he can suggest the proper remedies. He does not perform miracles like a magician He does not need to attract crowds nor does he commercialise his knowledge, because that would so utterly enmesh him

Let us now consider the question of miracles wrought by the so called Godmen. One such person reportedly says "he does not perform miracles but he *creates* because he is God" Now, it is one thing to say that one has the spark of the Universal Energy in oneself, like a drop of sea water claiming to have the qualities of the entire ocean. But it is as ridiculous for the same drop to claim that it *is* the ocean and is big enough to float a ship as the person claiming to be God almighty, the creator of the Universe! (All this presupposes the existence of a God which we can comprehend).

What does our Godman do? Produce sacred ash from his fingers, materialise a ring with his photograph, obviously prepared by some goldsmith somewhere? An Editor of a famous weekly was once presented with a golden chain, watch and a bottle of whisky on which the name of the Godman and the name of the Editor were inscribed! The Godman produced these articles out of

"nowhere" and told the Editor that they were his *prasad*! The only flaw the Editor noticed was that the genie controlled by the God-man's *siddhi* had misspelt his name! Such ludicrous acts of "producing or creating" things are intended to impress the gullible and con followers into believing that the Godman indeed had real miraculous powers and that he could solve the worldly problems of his devotees.

Presuming that extraordinary powers called *siddhis* can be acquired by Godmen by *sadhana* or practice, it would be useful if they collaborated with scientists, particularly space scientists, and taught at least a few spacemen the secrets of travel in the fourth dimension enabling them to reach other planets without the aid of the spacesuits and to bring back useful information from other worlds in the universe. But, this they will not do. They only use their powers to create ashes and gold watches made in Switzerland!

When even judges or ministers are impressed and turn into devotees of the Godmen, is it surprising that lesser beings fall in line and queue up for the *prasad* or to have their worldly problems solved by shortcuts? Why can't Godmen prevent floods and droughts or produce foodgrains and sugar instead of producing ash (or trash)? The usual answer offered is that, after all, men were destined to suffer for the sins of their past life and it would be wrong to interfere in the cosmic scheme of things Then why do some Godmen cure patients by their healing touch? Oh! That is because the repentant sinner has come to surrender himself to the "God" and the "God" decides to forgive him and relieve the devotee of his suffering! Can there be a greater fraud and callousness than this?

In fact, being a Godman has no connection with being a person with realisation When a certain Siddha came to Ramakrishna Paramhansa, so the story goes, and told the sage that he could walk on water and cross the river Ganga, Ramakrishna is said to have told him that it is a pity that, with all his lifelong *tapasya* and *sadhana*, all he could do was what a boatman did *every day* for a few paise! The story beautifully underscores the futility of such powers and the false values of persons who utilise them, in effect, for self-aggrandisement

In any case, why can't Godmen start colleges or universities and teach the science of acquiring *siddhis*? We would then at least learn that powers from a little known dimension can be acquired by scientific training It may be through the method of Hathayoga or Tantra or awakening of Kundalini or any other method that these gurus may like to teach the pupils. It would indeed be a boon to the humanity if these *Siddhas* could cooperate with the scientists in advancing the knowledge of man. He needs to develop further faculties in a new dimension to cope with the requirements of life in space and, looking ahead, when he is able to break the time barrier. While he has harnessed external forces through science for his own betterment a great deal, he has yet fully to explore his own internal resources. This can best be done by open and collective effort. Godmen must cooperate in the task instead of throwing a cloak of secrecy over whatever they know. Or is it begging the question? The Open inquiry which would explode the myth of their alleged mystic powers is perhaps precisely what the so-called Godmen are afraid of.

If so, they will represent an emasculated society where man has no control over his surroundings or resources and where the system makes him acquisitive, encouraging all unethical and anti-social practices. Most people want quick results and easy money today. They want everything including salvation instantly. Once the law of demand and supply is allowed to reign supreme, everything—your soul, your intellect, your ideals and values—become marketable commodities and you try get their demands fulfilled by different suppliers—mainly Godmen. Instead of creating an army of self-seeking, blind devotees, let these Godmen arouse the self-confidence and enthusiasm of the people and galvanise their energies to build a new prosperous India But this they will not and cannot do.

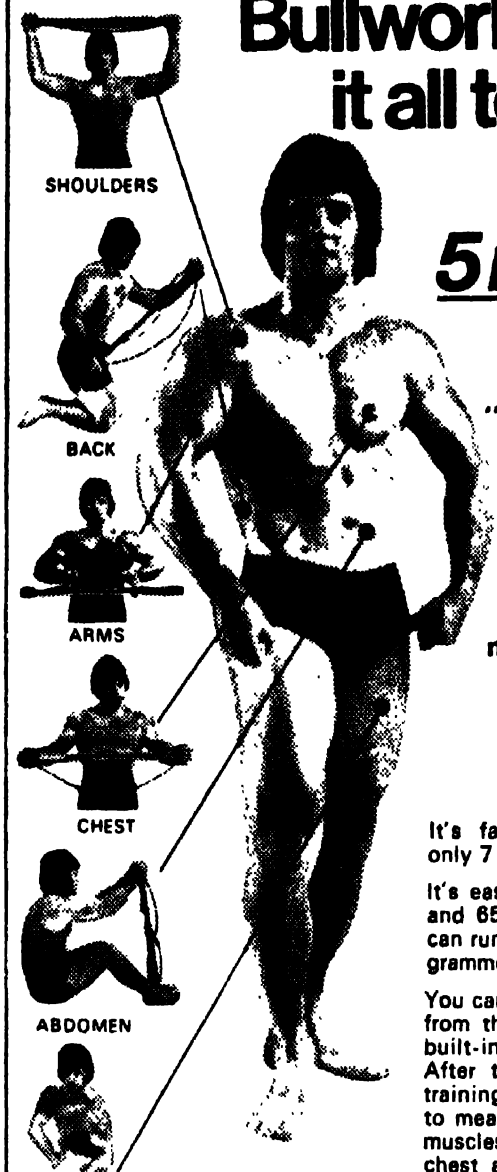
Indeed, some of them do not hesitate even to equate sex with self-realisation and encourage indulgence in sex and drugs by comparing their experience with *samadhi* (the trance of realisation). Realisation is the superior state of equilibrium *(Samatvam)* which brings about a lasting change in the personality of the one who has achieved it But to equate it with a momentary state of pleasure or drug-induced stupor is the worst form of chicanery and perversity

It is true that, like the hunger for food or natural need for evacuation of the bowels, sexual release is a natural biological urge. The only difference is that whereas in the first two cases, the individual alone is involved, in sex the male and female participate for more than one object With the pleasure that accompanies the act of copulation, nature also links the role of procreation. Sex is fundamental to the very existence and continuation of the human species To bring the two sexes together and also to provide for taking care of the offspring, nature has provided for mutual attraction in which so much emotion gets involved, this we call love.

The best and the most satisfying union of the opposite sexes is when the two are emotionally and physically attached to each other and are complimentary in consummation Anything else is just prostitution. Human society from experience has devised the institution of marriage for the sake of stability and parental care of the offspring It has, however, to be remembered that marriage by itself is not the guarantee of a mutually complementary union. It can be said that a truly satisfied person, both in terms of food, health and sex, has the necessary make-up for concentration, peace of mind and ultimately for self-realisation Probably because a satisfactory sexual relationship is so difficult to obtain, that rather than keep persuing it and get frustrated in the process, the knowledgeable and experienced persons thought it better to withdraw from this pursuit altogether. Hence many have been preaching abstinence But, this again has no direct bearing on realisation. As pointed out earlier, realisation is the knowledge of the totality of life and universe, which in turn enables a person to look at men and matters in broader perspective. This not only changes his comprehension but also his approach which to ordinary persons appears extraordinary.

It is again wrong to think that realisation is something godsend and very difficult to achieve except through the blessings of a guru Once it is understood that a person with realisation does not acquire supernatural powers, it will be easy to comprehend that every intelligent human being can aspire to and, with a little effort, achieve real sation. With many rational persons with a humanitarian and catholic approach to life, this feeling comes momentarily. But, under the pressure of worldly strife, they lose it equally fast. To acquire this sense of realisation permanently and make it a part of one's nature is really difficult. It requires constant practice of concentration and meditation to make *Sakshi Bhava* into *Sthayi Bhava* (the perceiver attitude a permanent one). "Yoga" is one way of doing so and those who understand and follow this intelligent path do not have to succumb to the frauds of the so-called Godmen. ■

If you're into fitness, Bullworker puts it all together *in only 5 minutes a day:*



"Looking for a fitness programme that's fast, easy and gets results right away?" asks fitness expert Bob Breton. "Bullworker puts it all together. In just 5 minutes a day you can give your body a complete fitness workout: shoulders, back, arms, chest, abdomen and legs.

It's fast: Each exercise takes only 7 seconds, once a day.

It's easy: Any man between 15 and 65 in good general health can run through the whole programme without getting tired.

You can see your progress right from the very first day on the built-in Powermeter guage. After two to three weeks of training, most men can expect to measure extra 2 to 5 cms of muscles on their shoulders, chest and biceps—and 2 to 5 cms less flab around the middle.

And that's just the start: there are specialized exercises for building-up or trimming down any part of your body you want to. What's more, since Bullworker training is progressive, you perform better each time. Yet the training always seems easy since with every workout your strength increases by about 1%—that's an increase of up to 50% in the first three months.

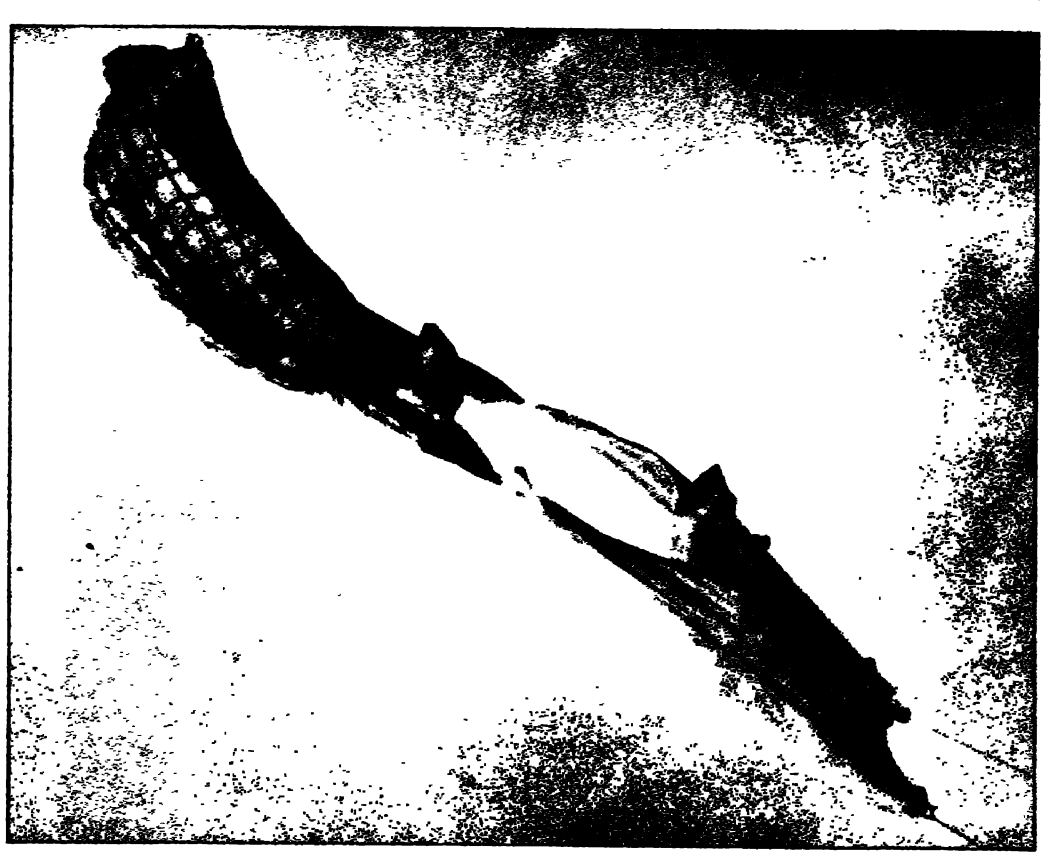
THE THIRD EYE

A Beautiful Language

Photographs and Text by Dr M. Kanitkar

I GRADUATED as a doctor in 1937 and have continued to practise medicine since. I took up photography as a hobby in 1933 and have been devoted to it for five decades now. I made my debut in an international photo salon in the year 1937. Twenty years later I was elected an associate of the Royal Photographic Society, London and the following year of the Federation Internationale de L'art Photographique, Sweden. I have won several awards at national and international salons and have organised many one man shows in addition to conducting classes. For me, photography is a beautiful language —and not as costly as it is made out to be!

ment he has yet fully to explore his own internal resources. This can best be done by open and collective effort. Godmen must cooperate in the task instead of throwing a cloak of secrecy over whatever they know. Or is it begging the question? The open inquiry which would explode the myth of their alleged mystic powers is perhaps precisely what the so called Godmen are afraid of.



Growing babies
need a special solid food...
Farex

Because Farex is the more nourishing solid food for babies' rapid all-round growth

Farex is rich in protein for your baby's growth.

To protect the baby from protein deficiency, the World Health Organisation has laid down certain standards for protein content in, and feed preparation of, branded solid foods A Farex feed, when prepared as directed, is rich in protein — so essential for your baby's growth

Farex has extra iron for healthy blood.

"The baby is born with a large store of iron from the mother, but these deposits gradually decrease after birth. Although milk is a good diet, it is not a complete food because it lacks iron. This is why he needs solids containing iron."

— Dr. Subhash C Arya

Iron is essential for your baby's blood, for his resistance to infection and for his general health and growth. That's why, Farex contains more iron than any other branded solid food.

Farex has the right ratio of Calcium and Phosphorus for building your baby's teeth and bones.

Your baby needs Calcium and Phosphorus for the development of his teeth and bones. But these can best be utilized by your baby if they are present together in the ratio of 2:1. Farex contains both these essential elements in this ideal ratio, ensuring healthier bones and stronger teeth for your baby.

And Farex is so easily digestible.

Farex has been specially pre-cooked to suit your baby's tender digestion.

For 25 years, Nirlon has unleashed industrial growth with its intermediary products. Whilst doing so, Nirlon has given impetus to small-scale entrepreneurs: fishermen along India's coastline, and weavers of Surat, Bhiwandi, Amritsar and Ludhiana, to name a few. These have become synthetic textiles industry centres, a large number being household units; many developed by Nirlon.

Nirlon has also raised living standards by providing jobs, and setting up its belting plants in developing areas. This enables an infrastructure to develop, along with welfare amenities. A testimony to these, Nirlon won the Indian Merchants' Chamber Award for Employee Relations.

Nirlon employees are among the best looked-after in the country. With housing, canteens, free education for employees and their families, health care and family planning, parks, an auditorium, activity centre and a community swimming pool at Goregaon.

Nirlon's pioneering spirit and management team never forgets that people matter more than machines. That welfare leads to better work opportunities — and that life is a celebration.

advantage for our people

Health

Rheumatic Heart Disease

IF we were to ignore leprosy because there are a mere 3 2 million cases in India –and it is a disease that does not kil'—there would be quite a hue and cry However, side by side, rheumatic heart-disease which affects nearly double the number (of children) is ironically allowed to play havoc with the lives of kids In a like vein, if no programme had been drawn up at the national level for the control of tuberculosis (8 million X ray positive cases) public indignation would have been vehement but in the case of a disease three fourth as frequent in children as pulmonary tuberculosis no cognisance is taken

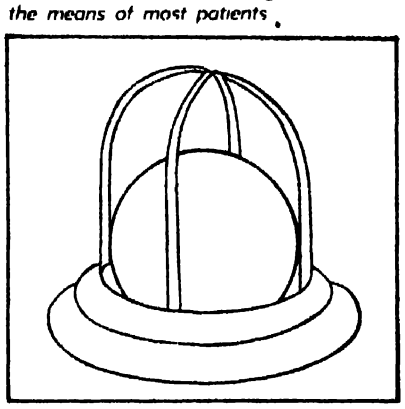
Rheumatic heart disease is the commonest type of heart disease in the hospitalised cases of cardiac disorders in all the large hospitals of the country constituting 30 to 40 per cent of the admissions in the cardiac category (The dreaded coronary artery disease—heart attacks and other less life threatening manifestations is a distant second)

There is positive proof that rheumatic heart disease continues unabated in the Third World—there are no signs of any downward trend in its prevalence in India (*Lancet*, October 24 1981) Numerous surveys among school children in the last 25 years have shown rheumatic heart disease to be a widely prevalent malady probably affecting an average of 56 per 10,000 children in the country Unfortunately it does not arouse widespread interest among the public in the way that epidemics of cholera and small pox did in the past

It is particularly galling when one knows that rheumatic heart disease is the type of cardiac ailment that is easiest to eradicate Indeed the West has very nearly freed its children from the scourge of this disease

Children and adolescents get sore throats which are often so mild that they tend to go unnoticed As a result, a child may, a few days later, develop rheumatic fever characte rised by joint pains and swelling It is well and good if the disease does not progress any further but, unfortunately some children so suffering can develop an inflammation of the leaflets of the heart valves Healing by fibrosis in a few years results either in narrowing of the valve-opening (offering resistance to free flow of blood from one chamber of the heart to the other) or incompetence of the valve, so that blood leaks or regurgitates into another chamber

THE ARTIFICIAL VALVE that replaces the damaged valve provides considerable relief and palliation Unfortunately the cost of this valve or such advanced surgery is beyond the means of most patients



The heart so affected will progressively fail to function effectively The child, once stigmatised with rheumatic fever, is very prone to develop recurrences and with each recurrence, the heart is further "bitten" The damaged valve can now be replaced by an artificial-valve prosthesis which can provide considerable relief and palliation

It must, however be understood that there are hardly ten centres in India which have the expertise and the facilities to perform open heart surgery Besides, it is beyond most patients to be able to afford the cost of the valve (Rs 5,000 to 10,000) or such advanced surgery

All rheumatic fevers can be prevented by the treatment of streptococcal sore throat with penicillin (primary prevention) but,, in that event, thousands of sore throats will have to be diagnosed and treated for preventing a single case of rheumatic fever something that is just not possible in any country save one extremely affluent The first attack of rheumatic fever is ordinarily not serious it is the recurrences that make it so Fortunately, such recurrences can be completely prevented by an injection of long acting penicillin once a month (secondary prevention) for a few years This has been rightly described as the finest achievement of medicine in rheumatic fever" and it is in this direction that WHO made recommendations for enforcement by developing countries Two pilot studies in India (at Vellore and Delhi) have amply demonstrated their feasibility and benefit

Now 1984-85 has been declared the Year of the Rheumatic Heart Child so that an effort may be made to give "the otherwise condemned children of developing countries a chance to benefit '— in the words of Dr H Neufeld President of the last World Congress of Cardiology A year is observed internationally to direct attention to a particular problem so that national and other efforts may be intensified to check and control it

A CARDIAC CRIPPLE Rheumatic Heart Disease is extremely common in children In India alone, there are almost 6 million children afflicted by it

In conclusion, it can be said that in India we have the resources, the capacity and the expertise to eradicate rheumatic fever by the end of this century if there is a concentrated drive, publicity campaigns for mass education and a national will Japan and a number of small countries (like Singapore and Hong Kong in Asia) have achieved a drastic decline in less than two decades India would do well to follow their example ■

That's Business

From Our Special Correspondents

MRS SANTOSH CHADDA.

YEARS ago a young girl, born and brought up in the verdant vale of Kashmir, used to watch with wide-eyed admiration the exquisite artistry of Kashmiri carpet weavers Today, Mrs Santosh Chadda presides over a family business, hers being the sort of success story that could serve as an inspiration for those endowed with the right kind of initiative and enterprise

Settling down in Delhi after marriage and raising a family, she found, after her children grew up, that she had time and ideas, but not enough money Mrs Chadda went to Kashmir, got in touch with carpet weavers, persuaded them to release a few pieces on a credit basis and sold these to members of the diplomatic community Having tapped the fancy of the capital's diplomats, she graduated in 1974 to exports, bringing her sons Anoop and Arvind, and daughter Jayshree, into the fold of a burgeoning business The boys have provided the drive and dash, and their sister the mellifluous touch in a business that involves, at the other end, the connoisseur

The Chaddas have dexterously exploited the growing fashion in Western Europe and the USA for luxurious hand-woven silk and wool-and-silk carpets They provide the designs and raw materials on a contractual basis to weavers in Kashmir, Jaipur, Punjab and Delhi The eventual price can range from Rs 40 to Rs 1,000 per sq ft, which means that the profit margin is large Maharaja Carpets' exports now touch Rs 75 lakh but should exceed Rs 1 crore if the Chaddas make a foray into the Latin American market They plan to participate in the Bogota Fair later this year

One thing leads to another. In 1979, Mr Rudy Fabre, who runs the Air-Routing International Corporation in Houston, USA, was so thrilled by his carpet purchases that he asked the Chaddas if they would like to become his agents in India. Thus was born Aviation Marketing and Services, which the younger Chaddas run between themselves. They provide services to private aircraft coming to India—arranging landing permits, furnishing flights plans, arranging ground transportation and hotel accommodation and what have you. "On an average we handle one flight every alternate day," says Mr Arvind Chadda.

The posh Chadda bungalow in Delhi's exclusive West End shows that luxurty carpets plus private aircraft add up to a lucrative business

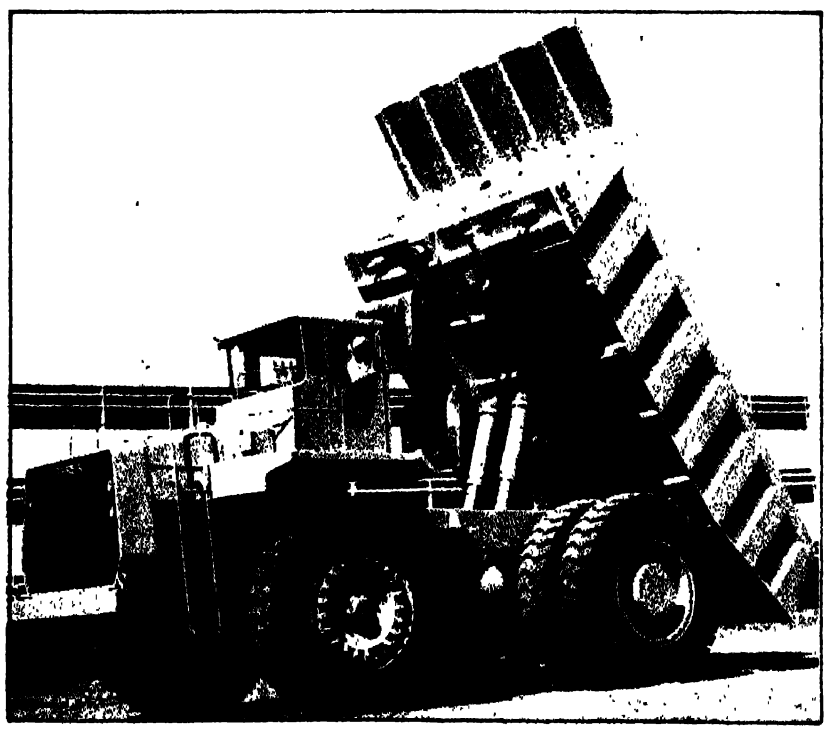
Project Exports

The Engineering Projects (India) Limited's giant housing project in Ardiya, Kuwait, can at last be regarded as complete because the Kuwaiti authorities carried out a final inspection on March 13. Nearly 2,500 housing units have been built over six years at a cost of 5,60,00,000 Kuwaiti dinars The EPI must be heaving a sigh of relief, for the project's chequered progress often found this public sector company in the dock. Even at the tag end there were hassles, if the inordinately long gap between the completion of the last phase and possession by the Kuwaitis is any indication Were the clients dissatisfied? The newly-appointed Chairman of EPI, Mr H C Malhotra, is taciturn about it.

MR H C. MALHOTRA, Chairman, EPI

He would rather talk about something else The EPI is trying for a Rs 200 crore turnkey defence project in Iraq Considering the nature of the project, political acceptability would be the decisive factor, which means that an Indian company stands a good chance Again, EPI is hopeful of getting a Rs 20 crore civil works contract at the Ruwas hydro-cracking project in Abu Dhabi It is negotiating with the Italian firm of Snam Progetti, who are consultants for the Abu Dhabi National Oil Company

A civil engineer, Mr Malhotra is all for the consortium approach in project exports "provided there is no duplication and overlapping"



Delivering The Goods

Statuesque and with the freshness of youth ruffling her tousled hair, Miss Anna-Maria Wiedenbeck looks more like a fashion designer's dream than a business executive, but she is one—the latter What she is doing in India sounds interesting

The inability of Indian garment exporters

MS ANNA-MARIA WIEDENBECK

to keep to delivery schedules and their proclivity to cheat on quality is an oft-heard complaint Otto Versand, a Hamburg-based mail-order house, was having problems on this score So it sent Miss Wiedenbeck out to India to work as a "technical consultant" with Indian exporters and to see if things could be improved Perhaps they have, for otherwise she would have been recalled Otto's imports from India now touch DM 20 million

But with the Indian red-tape's octopus-like quality of keeping businessmen (or women) in a bind, it must be a tough grind "Often, I have to work even on week-ends" Coming from a Westerner, that must be something!

Stock Exchange For Gauhati

The Calcutta Stock Exchange has taken steps to prevent undervaluation of investment companies which usually takes place at the beginning of a new financial year to reduce the tax burden on individual assessees Since investment companies are usually closely held, it becomes easy for them to transact shares at absurdly low prices and thus show fictitious losses This helps to save income tax as quotations on stock exchanges are regarded by the authorities as proof for allowing deductions for tax purposes It has now been decided not to print any transactions of shares of listed investment companies at prices below Rs 4 for Rs 10 shares

The stock exchange has also made conditions for listing investment companies more stringent by stipulating that the minimum number of shareholders should be 1,000 and the minimum share capital Rs 50 lakh The earlier stipulations were 400 for shareholders and Rs 20 lakh for share capital This should check the spurt in the number of investment companies listed on the stock exchange, despite the fact that these have become a still more attractive means of tax evasion in view of the budgetary proposal to tax the income of religious trusts

Representations had been made to the Union Finance Ministry that because of postal and banking delays a period of 14 days for hand-delivery shares was too short. North Block has, therefore, decided to extend the delivery period to three months But market circles think that this would mean substantial relaxation of the ban on forward trading, if not its revocation To guard against such abuses, the stock exchange Division of the Ministry has called a meeting of Executive Directors of the various stock exchanges in the first week of April to evolve counter-measures. One proposal is to impose margins on contracts carried forward from one settlement. Another is to have a two-tier system of making up prices for payment of differences

What is intriguing, however, is the move to offer a sop to Assam in the form of a stock exchange at Gauhati With mayhem ruling the roast in that State, the move, purely from the business angle, is meaningless Bhubaneswar's claim to a stock exchange is much stronger

Pollution Alarm

Some days ago, a few schoolchildren, walking between home and school in the Najafgarh industrial area, suddenly fell sick and had to be hospitalised Doctors diagnosed inhalation of sulphur dioxide and chlorine, two known air contaminants Factory owners honour their obligation to install anti-pollution devices more in breach than in observance Will this incident cause any twinge in the bureaucratic conscience and result in the enforcement of the Air (Prevention and Control of Pollution) Act 1981?

Gigantic Dumper

The Madras-based earthmoving equipment division of Hindustan Motors Limited has, in collaboration with IBH Holding AG, West Germany, developed a huge 85-ton dumper with a horse-power of 840 and a heaped capacity of 65 cubic feet To give you an idea of the dumper's gigantic size its wheels are nearly twice the height of a man First customer, the Rajappa project of Central Coalfields in Eastern India ■

1982 was an eventful year when we produced 80,000 mopeds.

1983 promises to be still more rewarding with our production of largest number of mopeds in India!

Hero-Majestic
Deluxe Moped

An automotive wonder on two wheels all set to set up a new record of performance

We have always been ahead of time on our production schedule. Quality being the essence and economy being the basic factor, we produced and sold 80,000 Hero-Majestic Mopeds in a single year.

Today, we are riding the crest of popularity with a daily production of 400 mopeds. The finest power-packed machine, Hero-Majestic Moped has won laurels for reliability. The attractive looks in a spectrum of colours goes to make it your best buy, besides the several outstanding features like fuel economy, braking efficiency, more load carrying capacity, telescopic front suspension, detachable V-Belt cover and multiple electric switch.

No wonder, people looking for an economically priced moped with minimum maintenance cost are going for Hero-Majestic.

IF YOU DON'T HAVE ONE, GET ONE!

THE country doctor came home all worn out and prepared for a good night's sleep, but no sooner had he retired than the phone beside his bed rang loudly. He nudged his wife· "Listen dear, see who it is, say you expect me soon, or anything you can think of "

The wife answered the phone. "Doctor is not at home," she reported

"Well, this is Mrs. Susheela," rattled a voice in the receiver. "I've got a pain in the chest and I want to see him as soon as he comes in "

The doctor whispered some instructions to his wife, which she repeated to the prospective patient "Do that and I'm sure you'll soon feel all right "

"Thanks very much," said the lady on the phone, "but tell me, is that gentleman who seems to be with you qualified to advise me?"

THERE is only one way to handle a woman The trouble is nobody knows what it is

THE smiling, confident young man entered a New York bank. He stepped up to the manager's desk and began, "Good day, sir. Has your bank any need for a highly-intelligent, college-trained man?"

The manager handed him an application form and offered to assist him in filling it out.

"Your name?"

"Theophile Babinger."

"Experience?"

"Just out of college."

"I see," said the manager. "And what kind of position are you seeking?"

"Well," mused the young man, "I want something in the executive line, such as a vice-presidency, for example."

The manager put down his pencil. "I'm really very sorry," he said sarcastically, "but we already have twelve vice-presidents "

The young man waved a hand, then stated with a happy confidence, "Oh, that's all right, I'm not superstitious."

A HOLLYWOOD starlet, who was more beautiful than brainy, visited friends one day and asked to be shown through their new greenhouse Pausing a moment before one plant, she asked its name.

"It belongs to the Begonia family," was the host's answer.

"Oh," gushed the beauty, "how nice of you to look after it while they are away."

NEIGHBOUR· "They tell me your son is on the college football team. Do you know what position he plays?"

Proud mother: "I'm not sure, but I think he is one of the drawbacks "

THE trouble with being a woman these days is that you've got to look like a girl, dress like a boy, think like a man, and work like a dog

PIANIST Rachmaninoff told this story about his boyhood:

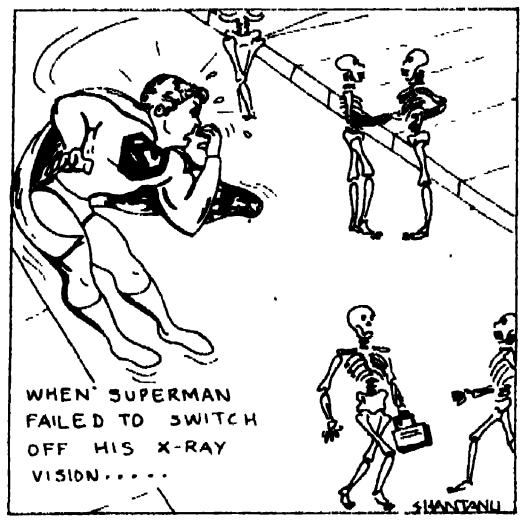
"When I was a very little fellow," he said, "I played at a reception at a Russian count's and, for an urchin of seven, I flatter myself that I swung through Beethovan's *Kreutzer Sonata* pretty successfully.

"The *Kreutzer,* you know, has in it several long and impressive rests. Well, in one of these rests the count's wife, a motherly old lady, leaned forward, patted me on the shoulder and said: "Play us something you know, dear."

HEYWOOD Broun was listening with disbelief to a speaker at a political rally who was giving his own version of the facts.

"How does he get away with it?" whispered a fellow reporter to Broun. "He's murdering the truth "

Broun shook his head in disagreement. "He'll never get close enough to it to do it bodily harm," he said.



JIMMY: "Oh, you're afraid to fight."

Johnny: "No, I'm not, but if I fight, my mom'll find out and spank me."

Jimmy: "How will she find out?"

Johnny: "She'll see the doctor going into your place."

A DISTRICT attorney was having trouble with one of the witnesses, a rather pugnacious old man.

"Are you acquainted with any of the jurors?" asked the D.A.

"More than half," grunted the witness.

"Are you willing to swear that you know more than half of them?"

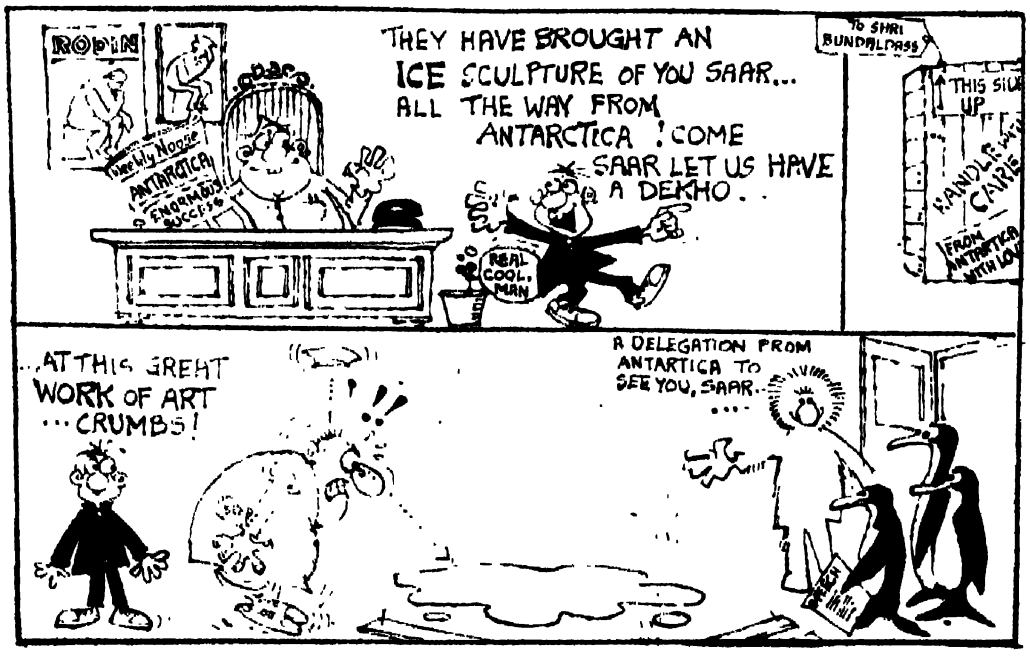
The old man flicked a glance over the jury box. "If it comes to that," he drawled, "I'm willing to swear I know more than all of them put together."

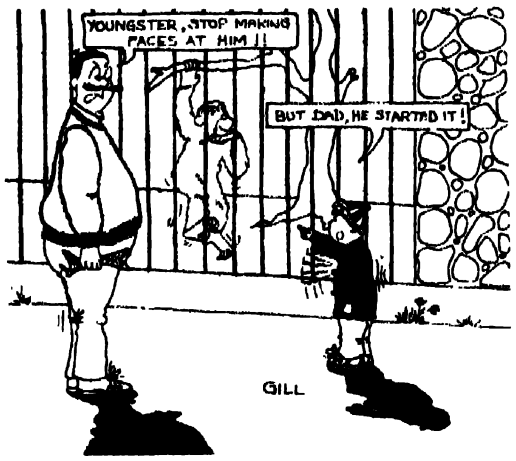
ARTIST: "I'd like to devote my last picture to a charitable purpose."

Critic: "Why not give it to an institution for the blind?"

SIGN on the back of a truck: "Please don't hug me. I'm going steady."

THE HON'BLE MINISTER BUNDALDASS • mario





A FROWNING woman walked up to a little boy she caught smoking.

"Does your mother know you smoke?" she demanded.

"Lady," he countered, "does your husband know you stop and talk to strange men on the street?"

A NEW Yorker, pointing to a hillside field, complimented the New Englander on his corn.

"How do you plow that field? It looks pretty steep"

'Don't plow it; when the spring thaws come, the rocks rolling downhill tear it up."

"That so? How do you plant it?"

"Don't plant it really Just stand in my back door and shoot the seed in with a shotgun."

"Is that the truth?" asked the New Yorker

"Hell, no That's conversation."

A MOTHER brought her four-year-old twins to a store for a final fitting of identical coats Wouldn't the twins like to see themselves in the mirror, the store owner asked.

"Oh, that won't be necessary," the mother replied, "They never do—they just look at each other."

JUDGE· "I am revoking your driver's licence, and you will not be allowed to drive a car for two years. You're a danger to pedestrians."

Motorist: "But your honour, my living depends on it."

Judge: "Yes, and so does theirs."

OFFICER: "Why did you keep on going after I whistled?"

Lady driver: "Sorry, officer, I'm pretty deaf."

Officer: "Well, don't worry, lady, you'll get your hearing in the morning."

YOUNG lady driver (presenting a parking ticket at the police station): "Did one of your men lose this? I found it on my windshield!"

A CONCEITED bachelor was invited to dinner by a lady of consequence. But he didn't accept. Meeting her on the street a few days later, he said in his best manner, "I believe you asked me to dine with you last week."

"Yes, I believe I did," responded the lady, adding, "and did you come?"

MRS Jones was reading a letter at breakfast. Suddenly she looked up suspiciously at her husband.

"Henry," she said, "I've just received a letter from mother saying she isn't accepting our invitation to come and stay, as we do not appear to want her. What does she mean by that? I told you to say that she was to come at her own convenience. You did write that didn't you?"

"Er-yes, I did," said the husband. "But I—I couldn't spell 'convenience', so I made it 'risk' "

ONE of the Sunday school teachers in a large and fashionable church was explaining to his class the significance of the colour white.

"White," he explained, "stands for joy. That is why a bride wears white when she's married. He wedding day is the most joyous occasion of he life."

"Then, why," queried the little boy, "do all men wear black?"

STATUTORY WARNING CIGARETTE SMOKING IS INJURIOUS TO HEALTH

WALLS

by Keki N. Daruwalla

Illustrated by P.B. Kavadi

She wondered at the total lack of anger in her. In fact, she had a sense of relief that the dream-shadows around her had been lanced with light.

MALTI got up and switched off the desert cooler, feeling relieved when its steady drone died down. Now she could once again hear the ceiling fan whir overhead. Opening the front door, she took the paper in, went back and flopped down on the bed, without wasting a look at the headlines. All she wanted was to be alone with her thoughts for a while.

Dreams had been at high tide during the night, wave upon wave sweeping over her like cloud-shadows during a rising wind. She wanted to mull over them and catch this stream of images at the edge of awareness before it drifted into limbo.

She had dreamt of people streaming into the living room, couples most of them, quite a few arm in arm. In the backyards of the dream she heard car-doors bang. The crush in the room became unbearable and she started wondering where to fit in all these people. As more of them came in, she noticed that there was no smile on their faces. In fact they hardly had faces, as they drifted in like silhouettes, to the background music of slamming car doors. Unconsciously she asked herself if they had come to condole. Wild-eyed she had looked for her children. They were there, both of them. The pressure of people seemed to be increasing and she thought that if they all exhaled at the same time, the windows would burst open. She looked for her husband and found he was not there. The inevitable car door slammed. But this time the noise was followed by the sound of tyre-wheels tearing over loose gravel.

She had woken up for a few moments and drifted back into dreams, like a fern reaching for shadow. This time she was in →

a room which was adjacent to a railway station, but at times seemed to be built right under the track There was a sense of *deja vu* about it all, for she had seen the room in earlier dreams, and had heard the symphony of the traffic overhead, as it rumbled past. She could feel floor and roof and walls reverberating to the onset of wheels Then she had felt some difficulty in breathing and woken up

It was only lately that she had started taking stock of her nocturnal visions Malti always felt that in the mornings dreams lie around you like bits of broken mirrors. When you look into them they can't but help reflecting your face as they see it now, in the harsh light of day

Going back to a dream, Malti had always realised, was stripping it of its dreamlight, its penumbral glow She had told a friend once that a recollected dream was as close to the real one as alimony to a marriage Only the figures were left in the morning, a string of numbers, bits of broken statuary which we sought to piece together with our logic

Her gown had slipped over her knees, but she did not bother to adjust it It was a lace-frilled gown, lavender-coloured and made of some synthetic material with a glossy finish She got up and the gown fell in satin-ripples beneath her ankles She looked down and found it was not crumpled

Standing before the mirror she noticed shadowy smears under the eyes, and the forehead furrowed The gown without one false crease, the face lined That nylon should have the better of flesh, ironic though it seemed, made sense to her. In another ten years she would be trundling around with a derelict face.

Walking to the basin she helped herself to a splash of cold water, rubbed the soap into a thick lather and washed her face. She was answering the mirror's questions with a new face now, as she stood there combing her hair, the plastic brush crackling every now and then with an electric charge as it swept down

OUTSIDE, the lawn must have been starred with the white-flowered *champa*. The whole night it kept dropping its floral excesses In the morning she would often pick them up and put them in a water bowl. They had a very faint smell, nowhere near the powerful fragrance of the *mogra*. But she did not feel like going out and collecting them this morning.

Their house faced east Opening the door meant confronting the sun, already gleaming like a radar dish, though it was not yet seven An hour later the gardener would come and lower the bamboo blinds on the veranda. The blinds had a blue cloth on the inside, and once they were pulled down, this portion of the house became moss-dark, almost blue with shadow, and an illusion of coolness stole over the place

The maid came and rapped at the kitchen door None of the servants came from the front, ever The sweeper, of course, entered only the bathrooms, both of which opened into the backyard Even the gardener, when he needed to consult her on buying seeds, or bringing a flowerpot from the nursery came and conversed in the vegetable patch next to the kitchen

Malti opened the door and within a few minutes tea was laid Anil was up, reading the paper, reclining against his bedrest For an hour almost total silence

prevailed, except for the rustle of the unfolding paper as he plodded his way from the front page to the editorial, to soccer forecasts for the coming world cup He noticed her listlessness and the fact that she had not asked for the middle page, as was her wont He had looked at her only once through the corner of his eyes to size up her mood

"You all right, I hope?"

"Yes, I am all right"

"Bad dreams again?" he asked, getting up and folding the paper.

"You wouldn't be interested," she answered rather wearily She had casually mentioned her shuttered dreams to him once when the cycle had started a month back He had given her the brush off then. "Dreams make bad copy," he had said rather enigmatically, "they need professional proof-readers."

An hour after Anil left for office she went into the veranda and nudged the heavy bamboo blind open, knowing exactly where the postman slipped in the mail. She drew a blank

Outside the heat quivered like a hummingbird. Shielding her eyes against the glare she stepped out, watching a vegetable-vendor trundle past on his ram-shackle bicycle, a huge basket slung on his rear carrier, his face half-hooded under a big damp cloth that flapped against his shoulders She never saw his face, and wondered for an instant what it looked like She walked in to get a reprieve from the sun

A small portion of the veranda had been glazed and turned into a study. It was draped with thick yellow curtains, which she drew aside. To hell with the heat, she thought, I want to look out through the glass. The sun now started beating like a gong against the panes. She gazed at the *neem* tree jutting out from near the hedge, and at the wall of glare beyond it, which gave a white sheen to the top branches. Viewed from a distant roof the tree would be one big parabolic shimmer, she thought. Yet the lower branches drooped with shadow.

Casually she thumbed through the first book she could lay her hands upon It was Camus's *Notebooks*, and the first sentence her eyes lit upon was, "Beyond the window there is a garden, but I can see only its walls. And a few braches flowing with light."

She mulled over that for a while, looking out Not a soul in sight What was wrong with being penned in during dreamtime? Why not let dreams stay in their bunkers? What was so great about a no-wall world? If you looked through a train-window while going to Jaiselmer you noticed that all desertscapes streamed past the horizon.

Her thoughts inevitably went back to the first dream in this cycle of hers, which she could still recall in vivid detail, the figures encrusted in her memory as clear and tangible as those carbonised denizens of Pompeii encased in lava-ash

She had dreamt of her parents and herself, all three staying in one room There was no rug on the floor. The room had two beds, one of them as thin as a railway berth. Her father had not shaved for a day at least, and carried a white stubble on his chin, as he shuffled across the room, his gait unsteady Her mother seemed as busy as ever in her chores, dressed, as in life, in a sari, the dream never focussing on her crow's -nest face. And then it was night even by dreamtime, with Malti turning restless on that railway-birth bed of hers, expecting her father to arrive by the morning train. She was assailed by doubts; must she go to the station to receive him or no? He could easily come on his own; after all one only had to take a tonga

It was odd, she had reflected later, that she had thought of a horse-carriage rather than a cab As the night wore on she had convinced herself that he could make it to the room on his own. His shuffling gait started haunting her. She wanted to throw her covering sheet aside and get up, but a paralysis of will seemed to have seized her, and she could not even stir. The anxiety about her father's return became more pronounced. She simply had to go and fetch him. There was no way he could make it on his own. The room now appeared to her as if it was adjacent to the Railway Station, quick with the tremors of passing trains. All she had to do was to go out of that room and she would be on the platform. She fought this icy stranglehold of inertia, threw the sheet aside, and woke up.

THE phone rang. Chaya was on the line. "Why don't you drop by this evening, Chaya? Anil will be so happy to see you"

"And you?"

"I don't have to tell you how delighted I will be."

There was no response from the other end

"Why can't you come, Chaya? I'll get Anil to drop you back, if that is what's worrying you And have dinner with us."

Chaya was firm about having no dinner She could not afford to return that late, she was expecting a call, and her dinner was already cooked. Malti felt a spasm of tenderness for Chaya, not unmixed with guilt

It was she who should have been phoning Chaya. Chaya's marriage with Harish, on the rocks for the past two years, had finally broken up. Malti had considerable regard for Harish, a large-hearted man, very gentle when sober, but a brute of a fellow when in his cups Anil's sympathies were totally with Chaya, especially during the last violent year of their marriage On the face of it Chaya seemed to have come out of it unscathed, with her laughter intact. But the hurt had gone deeper and if you knew her well enough, you could not but help noticing her wincing against the world.

In the evening Malti rang up Anil. "What is keeping you in office so long today? Chaya is here."

"Look darling, I have an important client here. I just can't make it for an hour"

"You better be back in fifteen minutes," she said sternly When she went back into the living room Chaya asked her rather plaintively, "Why did you bother him?" She looked so cool in her *choori-dar-kameez* outfit, sitting on the rug, nursing a tall gin and lime. The sofa-chair she reclined against kept sliding back with her weight. Malti put two cushions against the wall and made her shift. "Willowy as you are, this chair can't take your weight. You know I dozed off in the afternoon and I dreamt I was sitting on a rickety chair. I got down and sat on the floor like you, resting my back against a chair which slid back. Then I leaned against the wall and the wall tilted! It was so unreal!"

"But what did it mean?" asked Chaya.

"It didn't have a meaning, or at least not one that I know of Dreams appear in cuneiform. That's half the fun."

Barely twenty-seven and already divorced, thought Malti. She remembered a remark which Chaya had let drop when her matter was in the divorce courts, "A woman is the patron saint of pain." Recalled now, it sounded pedantic, But in those days it had embodied for Malti all the agony of womanhood.

"What are you thinking of?" asked Chaya.

"Nothing."

Anil came home sulking a little played

at having to leave office, it seemed. That can't be true, she thought.

"Don't pretend you have been dragged against your will. No one minds being with Chaya!" To her surprise Malti noticed him blanching a little. "And don't pretend you are very tired because you have to drop Chaya back. I wouldn't risk her with those taxi-wallahs."

"Let me at least sit down," he said. "I have hardly set foot in the house!"

He went in for a hurried wash. "Don't bother him," said Chaya, "I'll get a scooter or something."

"Nonsense! You are having dinner and going." When Anil came in, she said, "It is ages since we have seen her, haven't we?" Anil did not answer. After some small talk Chaya was on her feet. "I really must go," she said. "I would have stayed on for dinner if I was not expecting that call. Why don't you come and have grub with me? I have cooked heaps of *biryani*."

How can I tell her that this whole day I haven't felt like going into the garden, leave alone Vasant Vihar. There was much bandying about of dinner invitations. Finally Malti solved the problem "I tell you what, Anil can eat with you"

"But why can't you also come along?"

"I don't feel up to it." Another round of protestations which slowly petered off. When they drove away Malti felt a little let down Chaya had been unreasonable

SHE ate her meal quietly. She was about to change when a jeep drove up It was her robust, extrovert cousin, Kishore, who had a farm in Gurgaon He had driven down for an after-dinner coffee at the Oberoi.

"But Anil isn't in."

"Why do you let him loose at night? He won't come to any good." They laughed. "Where's he gone, anyway,"

"Vasant Vihar."

"Then let's have coffee at Qutab or Ashoka. I am not going to sit up waiting for him. Let us give him a surprise and drag his hosts along with him." His enthusiasm was infectious. She got into the jeep There were no half measures with Kishore The jeep groaned and lurched forward each time the gears changed.

"You've got the address, I hope."

"Yes, we are going to Chaya's."

"Chaya"? There was dismay in his voice. His foot came off the accelerator.

"You never told me we are going to Chaya's"

"You never asked. But what is upsetting you?" He was hard put to give a rational answer.

"Well, I was not mentally prepared, for one thing, if you know what I mean" She did not "Well I don't fancy her as the kind who would, on the spur of the moment, dash off for a cup of coffee at midnight. I was thinking of packing a flustered elderly couple into my jeep and go tearing over pot-holes and speed-breakers."

"It would be more fun going over speed-breakers with Chaya," she answered. "She may bounce into your lap"

He drove listlessly now, past the deer park and the tennis courts. As he turned right at the university he stopped and asked, "Are you sure you want to go through with this coffee thing? Don't you think the whole idea is childish?"

What was wrong with the man, she thought. Where had all that enthusiasm suddenly disappeared? Beyond Munirka he turned left into the Vasant Vihar colony, went past the Priya cinema and turned off the engine as the car rolled into the house Anil's fiat was parked there. There was only one light in the house. Kishore cleared his throat. "I wonder if anyone's home."

"There has to be," she said "the car is here." Malti felt her voice getting stuck in her throat, somehwere. She knew the place well. The only lighted room in the house was the bedroom.

"Do we have to go through with this?" asked Kishore gazing down at the steering wheel "I suggest we go."

He knew all along! He knew all along, she thought, noting the residue of pity in his voice, recalling his efforts to prevent her from coming here

Malti got down and rang the bell. There was no answer, no sound of footsteps inside. She got into the jeep and said, "Drop me at the Priya Cinema. I'll take a cab from there" When he started remonstrating, she stopped him with a shrill, "please" At lower pitch, though no less firmly, she added, "I know what I want"

After Kishore had driven off reluctantly from the cinema, barely a hundred yards away, she walked back to the house, feeling a little mean as she kept a vigil from behind the hedge Within a few minutes Anil came out and drove away, after having looked around in a slightly furtive manner She walked back to the cinema and took a cab.

In an Indian movie, she reflected, this journey would have been shown to the accompaniment of gusts of rain, and thunder rolling from end to end like barrels across a tilting roof, when actually she was merely traversing empty, tree-lined avenues, her hand resting on the slightly sleazy rexine of the seat She wondered at the total lack of anger in her. In fact, if she was concious of anything it was that the shadows around her had been lanced with light Things seemed to be falling into place suddenly, his lack of ardour during the last month and his occasional return from his morning squash without a drop of perspiration on him. He was obviously at Vasant Vihar rather than at the club.

As she alighted she was struck by the sudden unaccountable sense of relief she had been feeling for the last few minutes. To Anil's concerned queries she replied, "I got stuck ringing a bell. If I am late it is because someone took ages to answer"

No arguments, no bickering She just changed and went to sleep the moment she hit the pillow. As the dreams overtook her, for the first time in a month that cloistered feeling left her, and with it those shadow-scaffoldings that fenced in her sleeping hours The walls and the hedges disappeared and she drifted with her dreams, browsing on downhill pastures that went shelving away into the river-silt.

And the landscapes swung open like an iron gate ■

Your interests are secure under PSB's Bhagyashali Deposit Scheme.

Ever so often, you are confronted with an urgent need for fairly large sums of money. Why take chances when your interests are at stake? Good fortune is always at your side when you invest your money in the PSB's Bhagyashali Deposit Scheme.

A Rs 5,000 deposit grows to as much as Rs 14,800 in 10 years.

PSB's BHAGYASHALI DEPOSIT SCHEME

You will agree your interests are well looked after by PSB. For our schemes are tailored to your interests.

WANTED — 500 NEW COMPUTER PROGRAMMERS EVERY MONTH UNTIL 1986

Ever thought YOU could be one of them?

Two years ago a British Government Manpower-Report forecast that Computer Programmers would be in high demand, far into the 80s to cope with a tidal wave of new computer devices . ***500 new programmers every month until at least 1986.*** Events have fully confirmed the prediction. We're now into the Compute Age

YOUR BIG OPPORTUNITY?

It could be Computers need people — programmers, operators, data-processing staff, etc Why not you? You may well be suitable for weekend or full-time, hands-on training (No — you *don't* need to be a wizard at maths!)

CTI is the only private Computer training college which is an internal examining centre for the Royal Society of Arts We are superbly equipped with the very latest computer equipment and expert teachers to give you both theoretical and practical hands-on training.

The surest safeguard against redundancy or unemployment is to have a skill that's in great demand Worldwide and a recognised Professional Computer qualification. If we think you're suitable for training and a career in this ever expanding, space-age industry, we'll tell you so. If not, we'll be equally frank Write today, without obligation, for your free illustrated prospectus

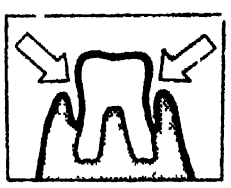
Make your gums strong.
And give your teeth a long life.

Only Forhan's has an exclusive astringent to strengthen gums.

The tingling sensation tells you it's actually working:

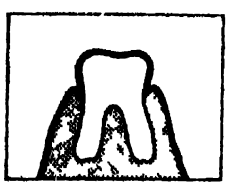
Even healthy teeth need the support of strong gums — if gums become weak and spongy your teeth no longer have a firm foundation. That's why Forhan's is formulated with an exclusive astringent that helps to tighten and contract the gum tissue. The tingling sensation you feel when you brush your teeth with Forhan's is the astringent at work — making your gums stronger, firmer. So that your teeth stay healthy longer.

So give your teeth a firm foundation — Use Forhan's the toothpaste with an exclusive astringent.



If your gums are weak, even healthy teeth become loose

Forhan's exclusive astringent tightens gum tissue



making your gums stronger, giving your teeth a long life

Trust Forhan's It's the toothpaste created by a dentist.

Next Week For You

S.K.KELKAR

CAPRICORN
(Makara)
Dec. 21-Jan. 19

Don't impose your views or opinions on others, otherwise some of your friends will perhaps bid goodbye to you. Await the propitious time to change your policies and views. Road accidents and minor injuries are likely to take place on Monday-Tuesday. Better luck on Tuesday for normal business/vocation.

AQUARIUS
(Kumbha)
Jan 20-Feb 18

Usually, you are patient and have a calm and cool exterior. This week, both these qualities will be put to the test and you may perhaps rudely cut off long-standing relationships and delicate ties. Friday is better for financial matters. Utilise Saturday for organising a social function with friends, guests and associates

PISCES
(Mina)
Feb 19-Mar. 20

Basically, you are much too emotional and sentimental. One of your closest friends or family members may commit mistakes innocently and unknowingly and you will think it was deliberate action. By midweek, you will either criticise vehemently or swear vengeance. By the end of the week, you will repent.

ARIES
(Mesha)
Mar 21-Apr 20

Patience is seldom a virtue in your case. Pool up all your energy and avoid any kind of hostility in and outside your home by midweek. Social and group activities and Government jobs should be postponed this week. Seek adjournment in legal-matters too. Have a small get-together on Friday.

TAURUS
(Vrishabha)
Apr 21-May 20

Enmity, either open or secret may cause physical and mental tension on Monday and Thursday. Ignore baseless and unfounded allegations if hurled against you on Wednesday, curb extravagance on Sunday. Plan a new strategy to defeat rivals on Friday. Saturday is lucky for success. Expect a windfall on Saturday.

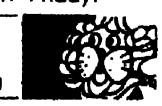
GEMINI
(Mithuna)
May 21-June 20

Expenses on medicine and treatment may drain your purse. Sudden conflicts in the family may take place over property matters. Near and dear ones may develop certain prejudices on Monday. Try to get along with your friends and associates on Friday. Saturday should be utilised for domestic chores.

CANCER
(Kataka)
June 21-July 20

Be tactful and adopt a defensive posture in all your dealings. Politicians and social workers may face a revolt and defections from among their followers and associates, either on Monday or on Thursday Pacify them and accede to their requests verbally. Engineer a new plan for weeding out trouble makers.

LEO
(Simha)
July 21-Aug. 21



A tricky situation may continue to confront you for the entire week. It would be prudent to heed what others have to say without making any final commitment. Ignore the rumours being circulated to malign you on Monday and Thursday. Friday is suited for paying back the opposition in the same coin.

VIRGO
(Kanya)
Aug. 22-Sept 23

Don't ventilate your views before strangers. An embarrassing situation may have to be tolerated by those in service on Monday. Check your trump cards before you appear before an audience and bosses on Wednesday. Make a sound judgement on Friday for pushing up your activities on Saturday.

LIBRA
(Tula)
Sept 24-Oct. 23

Your sense of justice and fair play is likely to be offended due to circumstances beyond your control. Abrupt job transfers may dislocate your activities, on Monday. Wednesday-Thursday may demand courage and tenacity to face awkward situations. Friday is the lucky day of the week.

SCORPIO
(Vrishchika)
Oct 24-Nov. 22

You are an expert in resing your anger and motives. This week your patience may be tested and you are likely to burst out and humiliate others and thus may lose a friend or associate. Tuesday is suited for expecting a letter or news from abroad. Deal with intimates cordially on Wednesday.

SAGITTARIUS
(Dhanu)
Nov. 23-Dec. 20

It is nice to be away from social, philanthropic and religious activities for some more time. Sportsmen and artists should be cautious and careful in displaying their skill on Monday. Guard against possible rift in your rank and file on Wednesday. Generation gap may cause much tension on Thursday.

STAR FOCUS

Halley's Comet 1

Among the vivid and various celestial phenomena, the appearance of a bright comet has attracted the attention of the masses for centuries.

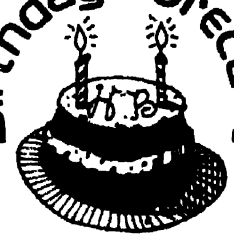
Tycho Brahe, Johannese Kepler and Isaac Newton had carried out extensive observations. This work was continued in Newton's Principia, which was published through the efforts of Edmund Halley. After prolonged study, Halley thought that the comet would return after an interval of 75 years. He predicted that it would return about the end of 1758. Subsequently, French astronomer, Clairaut, felt that the comet would pass its perihelion (the point of its orbit nearest the Sun) around April 13, 1758. The comet passed in perihelion on March 12, 1759.

Thus, Halley's prediction was triumphantly vindicated and it is thus fitting that the comet bears this name.

Since 240 B.C., the comet has appeared 29 times, the last occurrence was on July 11, 1911 when it was 520,000,000 miles from the Sun.

With the improved instruments now available, astronomers are learning more about comets by studying fainter ones that appear frequently. The discovery of another bright comet would accelerate this study. But even if no such comet is found, astronomers expect the return of the comet in 1986. The date is approximately calculated as February 9, 1986 at 9.30 a.m. G.M.T.

Birthday Forecast



Sunday, April 17

Move cautiously in all walks of life till August and thereafter you can do something worthwhile. Last quarter will help to restore your confidence and you can settle down on a sound footing in 1984.

Monday, April 18

Remember, discretion is the better part of valour, in the next couple of months; otherwise be ready to face far-reaching changes in work and your personal life. November-December are good months to plan ahead

Tuesday, April 19

This is going to be a disturbing year from many angles. Maintain status quo and get rid of the ticklish planetary positions till August. The period between October and December is a good one for jobs and business.

Wednesday, April 20

A feeling of loneliness and restlessness is going to continue till September Don't change jobs or partners in the next six months. You can look forward to a better and brighter phase by the end of August.

Thursday, April 21

Conflicts are likely to trouble you upto September Don't cut off existing ties but bear your burdens cheerfully upto August. Rapid and favourable changes may take place in November/December.

Friday, April 22

Despite a number of difficulties and bottlenecks, you can swim in troubled waters successfully on account of your shrewd behaviour and intuitive knowledge. Certain important decisions must be taken in November-December

Saturday, April 23

Your 1983/84 stars are of a mixed character. Drastic changes in August-September may change the course of your life. Financial position shows signs of improvement in 1984.

This Week's Bridge

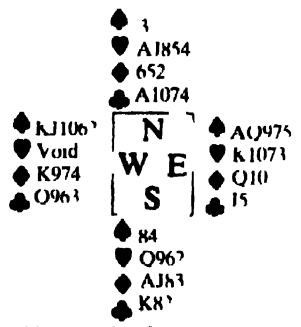
Tolani Masters-I.

THE Team of Four Duplicate event restricted to players with over 300 B F I Master Points took place in February at Bombay This National Masters event the winner of which gets a berth in the Trials to select India's international team is sponsored by Dr Nandlal Tolani the Bombay Shipping and Construction magnate who is one of India's foremost patrons of Duplicate Bridge

This year Dr Tolani introduced a Pairs event in addition to the team event Because of shortage of time players from states other than Maharashtra could not be informed of this in time but from next year onwards this event will be a permanent feature for National Masters from all over India

Jaggy Shivdasani and I were lucky to win the inaugural Pairs event and with it the handsome cash prize donated by Dr Tolani This deal from the two session 60 Board Final gave us one of our many tops It is instructive for matchpoint tactics Our opponents were Dr Tolani and his regular partner Bhagwan Shivdasani

East dealt with East West Vulnerable



The bidding was brief

West	North	East	South
Bhagwan	Jiggy	Tolani	Avinash
		1S	Dble
4S	5H	Dble	P
5S	Dble	All Pass	

Against Five Spades we had three top tricks which we duly took The real point of interest is the bidding At Rubber Bridge or Team of Four Duplicate that South hand does not qualify for a take out Double At Pairs on the other hand most experts tend to get into the bidding as quickly as possible and to compete vigourously for part scores At pairs a take out Double non vulnerable against vulnerable is a perfectly reasonable gamble on this particular South hand The gain came in unexpected fashion when after West's jump to game North had an easy Five Hearts bid—from his viewpoint the contract could even be making Tolani's Double was normal but Bhagwan who could see that defending FIVE Hearts could hardly be a profitable proposition judged to take out Right he was too because at all the other tables East West were allowed to play in Four Spades making so Five Hearts down two or even three would still have been a poor score for him

At Pairs more often than not one tends to play games in No Trump rather than in a minor suit because making say 10 tricks in Three No Trumps for 430 gives you a far better score than for making even twelve tricks in a minor game which is worth 420 These two deals back to back showed up the possible pitfalls in this approach

West opens One No Trump 12 13 non vulnerable and East holds

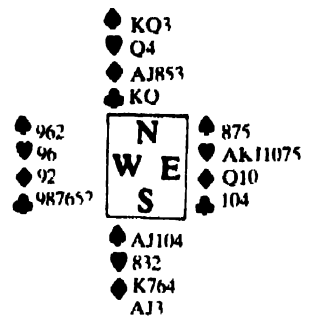
♠ 9
♥ J83
♦ KQ6
♣ A10532

At Pairs most players would bid what I did—Three No Trumps and then would sit as dummy and watch the opponents run off five Spade tricks and the Ace of Diamonds for two down with Five Clubs cold and four Hearts a make Partner held

♠ 1083
♥ AK104
♦ J82
♣ KQ4

This hand provided us with only 1 match point out of 7 The next deal was

North dealer Both Vul



The bidding went

West	North	East	South
	1C (1)	1H	Dble
P	2D	P	2H
P	3NT	P	3NT
All Pass			

North's One Club was Precision 16 up South's Double showed 8 or more points and his Two Hearts bid asked for a Heart stopper North decided to rebid Two No Trumps with his balanced hand and South reluctant to play in Five Diamonds bid the No Trump game Down Two when I was able to cash all my Hearts for 6 points out of 7 to us

North might have rebid 3 Diamonds at his third turn on which South would have bid 3 Spades North Four Spades which would have been the ideal contract Doubtless that's the way they would have bid at Team of Four Duplicate but the lure of Three No Trumps at Pairs proved fatal

Modak and Bhiwandikar the latter playing in his first major tournament played exceedingly well to finish second just ahead of Dr Kher and Balu Ukidave Ukidave incidentally finished second in the 1982 Nationals Open Pairs for the Holkar Trophy with Datar and Ukidave—Datar won the Modi Trophy at the same Nationals This a player of whom we are certain to hear a great deal in the years to come

Laws of Duplicate Bridge-V

Laws extracted verbatim from *Laws Of Duplicate Contract Bridge 1975* promulgated by The World Bridge Federation courtesy the publishers, Waddingtons Playing Card Co Ltd Leeds England (For details of this and other books please write to me)

Procedure after Establishment of a Revoke

Law 64 When a revoke has become established (penalty) after play ceases one trick is transferred to the non offending side if the side that revoked won a trick subsequent to the trick on which the revoke occurred in addition the trick on which the revoke occurred is transferred to the non offending side if it was won by the side that revoked This penalty for an established revoke does not apply

(a) If the side that revoked did not win either the trick on which the revoke occurred or any subsequent trick

(b) if the revoke was a subsequent revoke in the same suit by the same player

(c) if the revoke was made in failing to play any card faced on the table or belonging to a hand faced on the table including a card from dummy's hand

(d) if attention was first drawn to the revoke

(i) after a member of the non offending side has made a call on a subsequent deal or

(ii) after the round has ended

(e) if the revoke was made after the eleventh trick

When after any established revoke including those not subject to penalty the Director deems that the non offending side is insufficiently compensated by this Law for the damage caused he should assign an adjusted score

Communication is our business

The Weekly Pick

Indian Nationalism

Suntharalingan, Vikas, Rs 150

Though the subject may be hackneyed, this book presents a narrative study of the history of Indian nationalism from its origins till 1947. The author attempts to answer and analyse issues that have generated controversy among scholars.

Well researched and documented, this book devotes three chapters to the meaning of nationalism, the approaches to and origins of Indian nationalism. It then goes on to analyse in detail, the role of the Indian National Congress and that of Mahatma Gandhi towards the nationalist movement.

Problems of Indian Economic Development

K.N. Prasad, Sterling Publishers, Rs 200

Adopting a multidisciplinary approach, this book critically studies problems of Indian economic development, from national and regional points of view

Social and political phenomena like caste system, divorce and dowry, centralisation of power, welfare of the weaker sections, etc, are discussed with respect to their bearing on economic development

This book will prove extremely useful to students of Economics, Commerce, Business Management, Sociology and Political Science, but will not be of interest to general readers.

Worship and Conflict under Colonial Rule

Arjun Appadurai, Orient Longman, Rs 75

This book presents a case study of a temple in South India within an integrated anthropological framework. The author interprets the politics of worship and attempts to develop methods and models to study colonialism from a cultural point of view.

Rather dry and boring, this book will definitely not interest the average reader.

Airport Management

S. Ramanathan, SCOPE Publication, Rs 100

An interesting topic and one adequately handled by the author. The management of an airport (the kingpin of air travel) is a complex task, and has now developed into a specialised profession.

The author deals with the various aspects of airport industry, with a deep insight. The chapter, "Airport management in developing countries" is especially noteworthy for its comprehensiveness.

Though this book deals with a technical subject, it is nevertheless fairly easy reading.

Minnie

Actress Phoolan Devi?

A full-length biographical colour feature film, *Bagi Phoolan*, is being planned on docoit queen Phoolan Devi. An urgent communication from the producer has gone to Madhya Pradesh Chief Minister Arjun Singh, seeking permission to allow Phoolan and her paramour Man Singh to appear in the film. The State Government had earlier allowed notorious dacoits Madho Singh and Mohar Singh to feature in *Chambal ke Daku*. The producer has also requested the Chief Minister to allow her to give the two some necessary training in film acting a few days before shooting begins.

—UNI

Royalty Is Catching

Amy Irving, who is shooting for *The Far Pavilions* in Jaipur, says that her role as an Indian princess has inspired in her "a royal feeling. I notice my posture has improved" She has also honed her horseback riding. "Now," says Irving, "I can walk like a princess and ride a horse like a cowboy." Much better that than riding like a princess and walking like a cowboy.

—Time

Another India Location?

For sheer glamour it would be difficult to beat actress Joan Collins who, in spite of her rather ripe age, continues to wow audiences in blockbuster movies like *The Stud* and the television series, *Dynasty* Now she has reportedly been offered a leading role in a $13 million movie called *The Sword*. But what will interest movie fans is that the film is to be shot in Spain and India That is if the lady can find the time!

—Sunday Mid-Day

Burton's Terrifying Disease

Actor Richard Burton says he is still struggling with alcoholism but occasionally falls off the wagon to have "one or two bottles of vodka a day. It's no laughing matter; I am an alcoholic," he said in a recent television interview for the BBC. "It's a terrifying disease; as bad as cancer," he added.

Amitabh Inspires Murderers

Munawar Shah, one of the accused in the Abhayankar murders in Pune: "When I was in Yerawada jail, I remember reading about a judge who was Chief Guest at a *Filmfare* function and who gave Amitabh Bachchan the Best Actor Award for *Don* The same judge has sentenced us to death. He could appreciate good acting but he could not appreciate the inspiration we drew from such acting."

—Sunday Mid-Day

Jackie

Films-Worthy Farooq

While he was in Bombay, the Chief Minister of Jammu and Kashmir, Farooq Abdullah, had many serious official engagements. But he did have one frivolous evening. It was organised by film-maker Ramanand Sagar and the purpose was to introduce the young CM to "the intellectuals of the film industry". Fortunately the evening turned out to be anything but intellectual. Abdullah told the film people that he would henceforth charge them for police protection when they visited his State.

Later in the evening, when the mood was more mellow, Abdullah sang a Kashmiri folk song and those who saw him in action say it was an extra-ordinary performance, replete with mannerisms and suggestive gestures. Some film producers are seriously considering "signing" the Chief Minister

The *Saas-Bahu* Tangle

While Mrs Indira Gandhi is basking in the glory of international attention as the new chairperson of the Non-Aligned Movement, her troublesome daughter-in-law has been out of the public gaze for some time now.

But that does not mean that Maneka has run out of ideas. On the contrary, being the instinctive strategist that she is, proving herself to be Sanjay's widow, she is merely biding her time for the right moment to shoot right back into the headlines.

And, according to present plans, she is due to make her splash in early April, when she will launch her new political party. Already the residence of her lieutenant J.N. Mishra, near Delhi's Willingdon Hospital, has begun sporting a large name board bearing the Sanjay Vichar Manch legend.

Thus, soon after her ego-boosting success at the summit, Mrs Gandhi will have to undergo the irritation of witnessing her rebellious *bahu's* formal entry into politics as a full-fledged opposition leader

Settled Out Of Court

While Arun Shourie is sitting in an American university finishing his book on the *Koran*, his honour "back home" has been vindicated.

Two years ago *Society* published a piece in which it said that Shourie was a CIA agent who made regular trips to the USA under the pretext of his child's medical treatment. All this information, the magazine said, had come from one A.R. Antulay, who possessed documentary evidence of Shourie's CIA connection.

Mr Shourie promptly sued *Society*, even though the editor pointed out that the item had been published in the chatty, gossipy part of the paper. More. in the *Contents* page it had been made clear that all items appearing in that section of the magazine were "wild allegations" Mr Shourie did not think that was much of a defence.

Now in an out-of-court settlement, the magazine has apologised to Arun Shourie and his family and stated that it has the highest regard for Mr Shourie's integrity and his contribution to journalism.

—The Sunday Observer

Goldie

De Beauvoir Honoured

The French author and philosopher Simone de Beauvoir was named the 1983 recipient of the Sonning Prize for European culture. The award, announced by a faculty committee at the University of Copenhagen, is made every two years to a person judged to have made a "great contribution to European culture and civilisation" The committee selected de Beauvoir, 74, because of her "significance in European cultural life—partly as an author, partly as a philosopher and humanist, and not least as an inspirer of the modern feminist movement" It said most of de Beauvoir's books reflect "a universally human moral theme, often in the light of existentialism," the philosophy expounded by the author's long-time companion, the late Jean-Paul Sartre.

—International Herald Tribune

Burberrys: Tailored for Success

The war in the Falkland Islands was raging. But Argentina's foreign minister, Nicanor Costa Mendez, took a moment's break from a bout of anti-British diplomacy nonetheless. He slipped off to buy a quintessentially British product—a Burberrys raincoat.

Costa Mendez is just one VIP with a weakness for Burberrys products. Prince Charles likes to don a Burberry as does his mother, Queen Elizabeth. Churchill used to wear a Burberry, and so did Franco and de Gaulle Peter Sellers bought two Burberrys before the filming of every Pink Panther movie

—Newsweek

The Triumph of a "Larrikin"

In Australia they used to call Bob Hawke a "larrikin", Down Under slang for a mischievous—but lovable—rowdy. For years he was a renowned drinker, and as Hawke himself put it, "a bad drunk". He was a roue and a womanizer—with a bad temper into the bargain. For any other politician a "larrikin" reputation would probably be a disaster, but for Hawke it has been a measure of his success. Countless Australians say they respect his candour for admitting his faults and his success at overcoming them—and perhaps that is one reason why so many voted for him.

PUNJAB STATE AGRICULTURAL MARKETING BOARD POISED FOR BETTER PROSPECTS

Mostly farmers bring their produce to the mandis on tractor-trollies. In the Pic.: A farmer brings his produce to the market on his tractor-trolly for selling it.

Under the dynamic stewardship of S. Darbara Singh, Chief Minister, Punjab, and the able and sagacious guidance of its Chairman, Chaudhry Darshan Singh, the Punjab State Agricultural Marketing Board is implementing various projects and schemes for better agricultural marketing with vigour and dedication by:

A typical mandi scene during marketing season of agricultural produce in the Punjab. Newly constructed Covered Sheds to protect the produce against weather hazards are also seen in the picture.

Presently 623 regulated market-yards are functioning in the Punjab for regulating the sale and purchase of the agricultural produce. This strong marketing network is being further strengthened by establishing more modern markets and modernising the existing ones. The picture shows a typical market scene during peak arrivals at the mandis of the Punjab.

ESTABLISHING new mandis especially in the rural areas, to facilitate the farmers in the marketing of their produce at their door-steps. Work at 75 places for construction of modern markets at a cost of Rs 18 Crore is nearing completion. 60 of these markets have already started functioning

MODERNISING this transection of agricultural produce at the mandis by setting up mechanized units and grading laboratories etc., to speed up the sale and purchase of the produce. 8 Weigh-Bridges of 20 to 30 MT capacity have been installed, and more are being installed in the mandis These weigh-bridges have automatic ticket-recorder with inbuilt tape recording device. 80 Cotton-Sheds have been erected in the mandis to protect produce against weather hazards.

REGULATING and supervising the working of the marketing system to get fair returns to the farmers for their produce, and checking the malpractices in the mandis.

ASSISTING the financially weaker Market Committees in their developmental activities.

The Engineering Wing of the Board has taken in hand the construction of 88 houses for the staff of the Board in Sector 36 and 37, Chandigarh. The planning and designing of a six-storey Marketing Bhawan has also been finalized It will be built in Sector 35 at a cost of about Rs. 2 Crore

LETTERS TO THE EDITOR

Burning Assam

Sir—I appreciate the courageous assessment by your staffer, Sujata Anandan, ("Assam On Fire", March 13): "What Assam faces today, India may have to face tomorrow—invasion by the Arabs and Super-Powers and if the country remains as divided as it is today it will not be in a position to fight back" Bangladesh was also a secular nation when it became independent with the help of India Today it is an Islamic Republic But this has not opened our "secular" eyes

So long as we have secular policy enshrined in our Constitution we have to bow to Muslim pressure and the day is not far off when there will be numerous Pakistani pockets like Mallapuram District in Kerala. The majority community in India is sure to become the minority.

The atrocities in Assam stem from the Prime Minister's imposition of an unwanted election on an unwilling people. And she continues to perpetuate the same folly by allowing her own stooges to carry on with the administration of a State where 85 per cent of the population is opposed to it

My sympathies are with the natives of Assam. Had I been in their position I, too, would also have reacted similarly

R K Kutty
Bangalore

Sir—The article is interesting and informative The Election Commission has long been conscious of the consequences of the influx and had checked the voters list in 1979 when a large number of people were found to be illegal entrants in a parliamentary constituency in Assam. The observation that the people who wanted these immigrants to stay in Assam were tea-garden owners (who needed cheap labour) and politicians (who wanted votes of these minorities) is quite understandable. The recent election has not solved Assam's problem

If the problem of Bangladesh immigrants is not solved it will not be long before Assam's original inhabitants are dominated by foreigners and the State will aspire to the status of an independent Muslim state. Our experience of Pakistan, Bangladesh and Kashmir is not very happy.

S.C. Mathur
Agra

Sir—While quoting my views on the Assam problem you have described me as a member formerly belonging to Congress(I) Party I was a member of the undivided Congress Party, but at no time was I a member of Congress(I).

Dinesh Goswami
Member of Parliament
(Rajya Sabha)

Sir—I can find no justification for agreements like those between Indira and Mujib in 1971. Why should we take care of such a large number of poor "foreigners"? Don't we have enough of our own?

Our leaders are totally unaware of the conditions and feelings of the Assamese. If they were enlightened, would they sign naive friendship treaties?

Prabir Kumar Samanta
Midnapore (WB)

The IITs

Sir—Minnie Vaid's yardstick for judging the performance of IITs is faulty ("Are IITs Any Good?",March 13). Nobody in India or abroad would question the calibre and brilliance of IIT students If the Indian bureaucracy and industry fail to capitalise on the country's technical wealth, why blame the IITs and further conclude that they are a failure?

I have been a victim of this syndrome While working for my M Des degree at IITB, I designed an improved public telephone. All our efforts to get the concerned authorities to take an interest in the project failed The authorities were happy with the existing system which is over 100 years old!

Pradeep Yammiyavar
Dharwad

Sir—The author's contention that despite "enormous amounts" spent on the IITs they are not doing as well as they should, is erroneous. Engineering education (or education in medicine, for that matter) is an enormously costly affair. Although the Government grants seemingly increase year by year, thanks to inflation, in real terms the funds are extremely inadequate.

Coupled with the fact that IITs have to expand their activities to meet challenges in newer areas such as offshore engineering, remote sensing, unconventional energy studies, etc, to fulfil national aspirations makes it increasingly difficult for these institutions to keep in the forefront of expanding fields of science and technology. If resources available to even second-rate universities in the US or UK are compared to those available to the IITs, it is a wonder that the IITs are doing as well as they are. There are some sceptics who cite the example of Dr C.V. Raman whose Nobel prize-winning experimentation set-up cost only Rs 700 to 800. But it must be understood that geniuses cannot be produced, let alone trained.

Dr C S Gurujee
Bombay

Congrats

Sir—I was very pleased with the WEEKLY's new series, "Young Entrepreneurs". I enjoyed reading Mr Ratan Tata's profile ("Heir-Apparent To The Tata Throne", March 13). I found it extremely interesting and educative. I would like to congratulate you and Mr Hashim Khairullah for an excellent article. Such features provide excellent encouragement to entrepreneurs.

A P Mehta
Bangalore

Plumbing The Gap

Sir—In "A Tame Budget" (March 13) your correspondent is incorrect in his definition of the concept of "inflationary gap" and its application to India He writes, "Large investments in long-gestation capital and infrastructural projects results in immediate creation of incomes, but the fruits of such investments always take time to materialise. Thus we have what is called in economic jargon the 'inflationary gap'." According to Keynes "inflationary gap" is the excess of aggregate expenditure over income at full employment level of output. Once full employment is reached, pumping in more currency does not increase the output, it simply leads to inflation. This concept is applicable to developed countries and not countries like India where vast unemployment exists In our country inflation is not caused because of the inflationary gap, but because of structural bottlenecks We have "stagflation" *ie* inflation with stagnancy, the stagnancy being below the full employment level of output

D.R Gulati
New Delhi

Kapil And Calypso

Sir—Raju Bharatan's article "Of Kapil, Calypso And Sunil" (March 13) was thought-provoking I agree with him that it is wrong to say that the "inept marshalling of his resources by Kapil Dev" cost India dear. When we have such serious dearth of bowling resources where is the question of marshalling them?

However, Bharatan's comparison between Kapil and Sunil's captaincy is unwarranted. Although everyone knows that Kapil is an attacking cricketer, yet it is too early to pass any comment on his captaincy. His assertion that India could have saved the Test only with the "Sunil school of cricket captains" is unfair If he is saying that Sunil was defensive, it was the circumstances that made him defensive In fact, the majority feel that it is certainly more honourable to draw a match than to lose it.

Prabha Padmanabhan
Bombay

Sir—We appreciate Raju Bharatan's piece. As a captain, Kapil was at fault only when he tried to get the West Indies out for a low score Greenidge and Lloyd should have been allowed to bat The rate of scoring between them was slow.

K.V. Rajagopalan
Madras

Your Affairs: A Grave New World

Sir—The bespectacled, buck-toothed mousy girl in faded jeans had called ten young men for an interview to select a husband for herself The ad had asked for "handsome, young, fair-complexioned men, not shorter than 5'10", IFS, IAS, engineers, doctors, etc." (IPS was perhaps "too crude"). Of these seven were rejected for various reasons. one could not sing a duet while going round a tree A few failed in the cooking test One could not change the diaper on a given doll And one did not know the "more's position" from the *Kamasutra*. Finally, three were short-listed, their parents were asked to contact the girl's father for settling the "terms"—the amount of gold to be given to the bride, flat, fridge, colour TV insurance, etc. The lucky boy's parents celebrated the wedding with pomp and splendour, with a reception at a 5-star hotel and honeymoon in Kashmir. The couple lived happily thereafter .

That is, for four months Then came the shocking news that the mechanical engineer-MBA husband had caught fire mysteriously and died while lighting a kerosene stove. The indignant parents of the boy sent telegrams to the President, the PM, the CM and others, accusing the girl and her relatives of foul play (the local police were alleged to be in collusion) The "dowry death" was ignored, of course The buck-toothed vixen is interviewing candidates

This "reverse scenario" of female tyranny may indeed become reality if the recent study of two Pune sociologists, Dr (Mrs) A Ramanamma and Dr (Mrs) Usha Bambawale, Dept of Sociology, Pune University, published in the scholarly journal, *Social Science and Medicine* (Pergamon Press) is an accurate indication of the future It is known that many hospitals undertake tests for the determination of the sex of the foetus. Facilities are also available for the Medical Termination of Pregnancy (MTP) on request

From studies covering nearly 500 requests for foetal sex determination, the researchers found that almost everyone with a female child immediately went for MTP. This can only result in a terrible dystopia where the majority of Indians will be males fighting for the few female gargoyles.

These are days of historical justice The sins of the great-great-grandfathers should be made to visit on the great-great-grandsons The male chauvinistic pigs have grunted enough. The female chauvinistic sows will take over. The hens will begin to rule the roost. The dogs have had their day. The cats will now meow. Alark! The Grave New World is coming!

6 COVER STORY: ***Dynastic Rule Is A Myth.*** "In India, it is unthinkable that democracy can ever be replaced by a dynasty, a monarchy or a military dictatorship," says K.C. Khanna. "Even those who are convinced that Mrs Gandhi harbours dynastic ambitions cannot ignore the power, the resilience and the sagacity of the Indian electorate."

8 ALSO: ***Of Politicians, Sons And Perspectives.*** "The question why dynasties are sought in supposedly democratic environments is most relevant in India, for it deals with a very real political situation," says Romesh Thapar, Editor of *Seminar*.

10 ***Of Apostolic Succession.*** "Mrs Gandhi did not invent dynastic rule. She has only tried to perfect it," says K.R. Sundar Rajan.

11 ***People's Choice Will Prevail.*** "The genesis of this myth about dynastic rule is the crudest example of the Goebbelsian technique," says Union Minister Vasant Sathe.

12 ***The Dynastic Debate.*** Nachiketa interviews Lal Krishna Advani, Chaudhury Charan Singh and Kamlapati Tripathi in Delhi while Rina Kamath in Madras talks to M. Karunanidhi.

59 HUMOUR: ***Out Of The Woods.*** Vijay Kumar on the relentless policy of "give-and-talk".

34 POLITICS: ***The States Do Have A Case.*** "The recent meeting of the Southern Ramas is not the first attempt at restructuring Centre-State relations," says G.S. Reddy.

16 ALSO: ***Where Every Drop Of Water Counts.*** Girija Prabhakar on Madras City's worst water crisis.

28 REPORT: ***Afghan Refugees: They Wait With God.*** Anees Jung files a graphic report from Kacha Garhi in Pakistan.

24 VIEWPOINT: ***Punjab Tangle: Hindus Hold The Key.*** "Only with patience and determination can the complex issues be resolved," says P.K. Nijhawan.

19 SPORT: ***Is Sandeep Lost To Cricket?*** Raju Bharatan corners the cricketer who's put on greasepaint instead of a helmet.

38 INVESTIGATION: ***Rs 500 Crores Go Up In Smoke Every Year.*** Aruna Sood on the staggering losses caused by accidental fires in the summer.

36 ART: ***The First Bharat Darshan: In Paint.*** Sarosh Demavent reviews *Picturesque India* on the aquatints of Thomas and William Daniells.

29 HAPPENINGS: ***Letter From Calcutta.*** Sumita Sandilya focuses on the angel on Victoria Memorial; wildlife in the city; the protest against the bus-fare hike; the eternal power-cut and the dhobis' agitation.

32 IN THE STATES: Highlighting the bunglings at the Hazaribagh coal mines; the end of the DMK Congress-(I) honeymoon in Pondicherry.

22 FESTIVAL: ***In Colourful Jhabua: Where Eloping Is Sacrosanct.*** Chakresh Jain celebrates Holi with the Bhils.

51 FICTION: ***Rain Of Fire And Gold.*** Beginning a three-part serial by P. Thomas.

40 THEATRE: ***A Company Called Shakespeareana.*** Asha Suri on Geoffrey Kendal's peripatetic group.

44 PHOTOFEATURE: ***Escape From Reality.*** Text and photographs by Kocai Sitharam.

Dynastic Rule Is A Myth

MR CLEAN Rajiv Gandhi and mother

THE LATE LION OF KASHMIR with cub Dr Farooq Abdullah

SHEIKH HASINA WAZED daughter of the late Mujibur Rahman (right)

by K. C. Khanna

NORMALLY it should not be necessary to nail down a myth By definition it is a fable an imaginary story woven round a fanciful if popular idea person place or thing

But the myth of dynastic rule in India s political context falls in a different category Precisely because it is widely believed in it has become a handy brick for the Opposition and the dissidents to hurl at the Prime Minister More to the point it confuses the intelligentsia tends to alienate it from the Establishment for the wrong reasons and vitiates debate

Rajiv Gandhi s appointment as General Secretary of the Congress (I) and the more recent attempts to refurbish his image—witness his foray into the Dharavi slums in Bombay amid throngs of milling admirers—has again stirred a hornets nest The intelligentsia sees it as one more evidence of Mrs Gandhi s bid to nurture a ruling dynasty and to go about it systematically

Its fears are rooted in certain undeniable facts The rise to political eminence of Mrs Gandhi s second son Sanjay was meteoric at the time of his accidental death in June 1980 he had emerged as the second most powerful political personage in the country And now Rajiv next only to the Prime Minister herself is the most important official in the Ruling Party Everyone knows that its Working President Kamlapat Tripathi and the other General Secretaries do not count for much

Then there are other factors Motilal Nehru (as K R Sundar Rajan pertinently points out in a subsequent article) took a lively interest in promoting his son s career and Jawaharlal Nehru in turn did not hesitate on occasion to thrust Indira Gandhi into the limelight More significantly Nehru was Prime Minister for 17 years Mrs Gandhi has held the post with a break for a total of 14 years Having inducted Rajiv into politics Mrs Gandhi would be less than human if she did not aspire to her elder son getting to the top At least so the argument goes

Mrs Gandhi herself has repeatedly stressed that hers is a political family Comparisons with the Churchills and the Kennedys may seem far fetched But what about Farooq Abdullah being anointed the Crown Prince by his father Sheikh Abdullah or Nusrat and Benazir inheriting the mantle of Bhutto or Begum Hasina stepping into her late father s *gaddi* as Chief of the Awami League? In the Indian subcontinent the laws of inheritance often extend far beyond property They tend to embrace culture talent business and even vocation

The common man in sharp contrast to the Indian elite takes a very relaxed view of it all He is not at all disturbed if told that Mrs Gandhi is trying to groom Rajiv as her successor He sees nothing wrong in her trying to do for her son what others have done for theirs And he effortlessly nods approval when she claims that in the final analysis she cannot nominate her son as a successor—it will be for the people to decide For he knows that when it comes to the crunch the popular will must prevail He has faith in himself In this day and age a dynasty any more than a monarchy cannot be imposed on a people with a modicum of civilisation It is a different matter if the people themselves opt for one -as the Spaniards did not too long ago

The Indian intelligentsia however seems to be less sure of itself By some strange alchemy of double think it has convinced itself that political aspirations of a Prime Minister s son are inconsistent with democratic norms if not morally sinful

In India, it is unthinkable that democracy can ever be replaced by a dynasty, a monarchy or a military dictatorship Even those who are convinced that Mrs Gandhi harbours dynastic ambitions cannot ignore the power, the resilience and the sagacity of the Indian electorate.

In this respect alone the intelligentsia suffers from a mental block It never bats an eyelid if a son takes over his father s legal or medical practice shop or factory No political party is ever criticised if it hands out the ticket for the seat of a deceased MLA to his son brother or widow Learned judges and well heeled lawyers—vicious critics of Mrs Gandhi among them—prostrate themselves with fervour before hereditary gurus and temple priests Belonging to an 'army family" or a family of Civil Servants is still something to boast about But the Prime Minister commits

sticks. By the same token, however, she should be given due credit for overruling Sanjay's advice and calling an election she lost. But she is not.

Likewise, the fact that Rajiv is very different from Sanjay is generally ignored. He is modest and courteous. He wants to restore the decencies of public life and make politics cleaner. Already, he is trying to turn the Congress (I) from a rabble of self-seekers into a cadre of trained, if not dedicated, activists. But his political education is still rudimentary and his exposure to the communal, regional or linguistic passions that move vast masses of our people minimal. He has yet to summon the will to grapple with the pervasive evil of corruption and steer clear of servile sycophants. In fact, he has responded to the growing misgivings in the country about the working of the so-called Kitchen Cabinet at 1 Safdarjong Road by assembling one of his own at 3 Motilal Nehru Marg

How Rajiv will shape his own destiny or how destiny will shape him must, therefore, remain in the limbo of conjecture. But it is clear that, at present, he is less an heir to Mrs Gandhi's charisma than a victim among the intelligentsia of the Sanjay-induced trauma. In future, his usefulness to the nation must depend on how quickly and completely he distances himself from the methods or the values that Sanjay came to symbolise.

In India, it is unthinkable that democracy can ever be replaced by a dynasty, a monarchy or a military dictatorship Even those who are convinced that Mrs Gandhi harbours dynastic ambitions cannot ignore the power, the resilience and the sagacity of the Indian electorate. That is why perhaps Romesh Thapar *(see Page 10)* calls it a "delusion". But, beleaguered as she is, it is at least equally possible that, in turning to Rajiv, Mrs Gandhi is thinking more of today than of the day after. ■

BENAZIR BHUTTO has now donned the mantle of martyrdom after her father's death.

AYATOLLAH KHOMEINI (left) with son Seyyed Ahmad.

in unforgivable crime if she persuades ier other son to join her in the political irena!

In fairness, it must be said that there ire good reasons for this gut feeling The way Sanjay conducted himself dur-ng his few years in politics was, to put it nildly, chilling He threw all canons of ublic morality to the winds, created a oterie of sycophants and hangers-on, ubverted the intelligence and other ervices to inspire fear in friend and foe ind reduced his own party to a sham-les He was an "extra-constitutional" uthority if ever there was one Mrs Sandhi had to pay a heavy price for her ailure to rein him in. Both had to spend hree years in political wilderness, en luring the scorn of old enemies and ecent apostates in consequence.

The way the collective wisdom of the lectorate asserted itself during the ateful elections of March 1977 might ave set the mind of the intelligentsia at est about the re-emergence of the anjay phenomenon in a differe:it incar-ation. It has not. For all thinking ndians know only too well that the hoice before the voter is seldom be-ween good and bad, it is usually etween bad and worse. In 1977, the anata had the benefit of a negative ote. In January 1980, Mrs Gandhi, anjay and his retainers cashed in on it. On the eve of that poll, Sanjay once told ne that "an unknown candidate is a trong candidate". His strategy of put-ing rootless nonentities against the vell-known wheeler-dealers of the Jana-a and the Lok Dal paid off.

The fear that it may be no different in 985 still haunts the Indian intelligent-ia. It sees no hope of a viable alterna-ive to the Congress (I) emerging in the ext two years. Nor is it persuaded that Mrs Gandhi has sufficiently changed ier style of functioning to restore "in-ier-party democracy", the autonomy of he Civil Services, the independence of he Judiciary and the role of Parliament is a watch-dog of public interest. So what is the answer?

The stark truth is that it is impossible o provide one. One has only to recall the days when *After Nehru, Who?* was the big question that bedevilled Indian politics and no one could predict what eventually happened. Lal Bahadur Shastri was a dark horse. The thought that Mrs Gandhi may occupy her father's post crossed no one's mind, least of all her own. Lena Jeger, a columnist of *The Guardian*, London, once told me a revealing anecdote after a chat with Mrs Gandhi on the sunny lawns of the British High Commission during a visit to New Delhi in the winter of 1966. Mrs Gandhi, then a Minister in the Shastri Cabinet, complained bitterly about how things were going wrong. "Why not an alternative—you, for example?" Lena suggested helpfully. "Whoever will think of poor me!" was the short reply.

In retrospect, it is incontrovertible that destiny would have taken a different turn if Mrs Gandhi had not grown in the job to which she was artlessly drafted by a bunch of calculating "kingmakers" And, during her first year in office, there was no sign that she would. She surrounded herself with a coterie of "learned advisers" who were too preoccupied with their own intellectual gymnastics to grapple with any of the country's horrendous problems meaningfully. She devalued the rupee and inflicted a grievous damage on the economy. She seemed uncertain and confused at press conferences. Her performance in Parliament was so appalling that the late Ram Manohar Lohia nicknamed her *Goongi Gudiya*—a dumb doll.

Today, the scenario is very different. Those who dub Mrs Gandhi an Empress or accuse her of nurturing dynastic ambitions have long forgotten that till about a decade ago, when both her sons were well past adolescence, neither had shown the slightest inclination to get into politics. One was settling down to a career as an airline pilot; the other had grandiose ideas about being a genius in the realm of automobile engineering. This does not by itself establish Mrs Gandhi's democratic credentials: the stigma of the Emergency still

Of Politicians, Sons And Perspectives

"Rising sons" are casting terrible shadows all over the global political horizon, says Romesh Thapar, Editor of *Seminar*. Indeed, they are positively proving to be environmental hazards "because in the shadows they breed the military-police complexes which politicise rapidly and consume the open society leaving humanity with no alternative but the rigid authoritarian/ideological State and its inevitable dynastic overtones. All this is very much a part of the reality we live with in this enlightened age".

R. B BEDI

"IT IS PATENTLY ABSURD to attempt to rule a complex subcontinent from a single point of power, let alone a dynasty." Picture shows Mrs Gandhi with her daughter-in-law and grandson.

THERE is a profound contradiction between democratic processes and dynasty-making. Why are dynasties sought in supposedly democratic environments? The question is most relevant in India, and it deals with a very real political situation.

Long before the Emergency took shape, we witnessed a studied effort to use the personality cult to dominate the levers of power. First, the Ruling Party was split, torn apart on mythical issues, socialist and not-so-socialist. Then, the carefully balanced inner-party elections were suspended. Independent political personalities were compromised and replaced by sycophants. The press and mass media were interfered with. The Judiciary was softened by compromising the accepted norms for the appointment of judges. And an atmosphere of conspiracy for vague progressive goals was promoted to dissolve genuine doubts and fears. The smashing of the Pakistani military in Bangladesh fed the personality cult. The leader became the party. And, then, the gates were wide open for dynasty-making.

It is only natural that this kind of political ethos nurtures the cult of family and of dynasty. There is too much privilege to be lost. The plebian becomes patriarch. Indira Gandhi, at the height of her power, pushes her boys. The nationalist Chiang Kai-shek leaves us his son in Taiwan. The Communist Kim Il-sung pledges to do the same in North Korea.

In Haiti, a father and his son perform with political voodoo, Mujib in Bangladesh is destroyed, together with his family, just in case—but, the daughter returns to revive his followers. In Pakistan, former President Bhutto is indicted for murder, but his party's vacant leadership is taken by his widow, and then his daughter. And so it goes on all over our world.

There are papa-docs, mama-docs and baba-docs casting terrible shadows over the political horizon. Indeed, they are becoming very much an environmental hazard because in the shadows they breed the military-police complexes which politicise rapidly and consume the open society leaving humanity with no alternative but the rigid authoritarian/ideological State and its inevitable dynastic overtones. All this is very much a part of the reality we live with in this enlightened age.

I am very deliberately generalising because this political environment is not merely a manifestation of under-development. It is global and has striking variations. Not so long ago, there was an easy erosion of democratic norms in a country like France on the plea of national will or interest *a la de Gaulle*. The calculated misuse of the levers of power and patronage around the presidency of the USA by "the military-industrial complex" was heavily underlined by General Eisenhower himself. Tribal tyranny and gangster control is inherent in so many of the African and Latin American regimes based on either ethnic dominance or *coup d'etat*.

Then, there is the acceptance of massive corruption by tiny elites in countries like Indonesia and the Philippines. And let us not forget the crude monopolisation of jobs and perks by small, cynical coteries linked by feudal loyalties as in the lands of Islam. These environments, dressed up in attractive slogans and catchwords, are the breeding grounds of authoritarianism and dynastic ambitions at all levels of political and economic power.

Basically, from what lessons the Indian experience holds, it is the psychology of illegality which ultimately overwhelms the open society. It is initially sparked by the politician's apparently innocent interference with the codes and norms of governance to obtain minor advantages for friends and supporters. Then, the system is politically penetrated at all levels. Very soon illegalities are condoned. They build up. They are then sought to be covered up or defended on various grounds by misusing government systems and even independent institutions. No fundamental corrections are sought.

A kind of continuing confrontation between a tattered authority and burgeoning anarchy develops. The growth of money-making mafias demands a protecting godfather, a godmother, a totem. And, then, in the context of future security and continuity, dynasty-making becomes imperative.

Small wonder, too, that these developments are accompanied by intense astrological speculation and tantric rituals, with the Prime Minister prostrating herself before temple deities.

It is very necessary to understand the inter-connections in the conduct of public life or else we imagine that some special charisma is at play to project a Sanjay or a Rajiv. There is a vicious system of profit and privilege which builds the concept of a leader and a dynasty. The mobs that howl their hallelujahs are also rented, and those who are not are persuaded either that the dynasty is relevant or that there is no other viable alternative. The stake is immense: some 20 million supported by the urban population and living off the rural hinterland where 320 million scrape an existence below the poverty line. Two nations in one, cemented hopefully by charisma or dynasty! May be, this is why all those who seek to replace Indira Gandhi search for charisma, to begin with.

What happens when corrupt, incoherent and totally ineffective governance drives the people to despair? The charismatic leader, the ruling family, the dynasty become irrelevant. The vote banks cannot be held. The political hangers-on become insecure. Factionalisms rock the party. The minimum disciplines crumble. This phase is punctuated by overpublicised efforts to revive the image of the party, the leader and the dynasty. They have become inseparable and, therefore, mutually destructive. We are well into this phase, and it will persist so long as a viable alternative does not form. If it is visible regionally, as in Andhra Pradesh, a sudden uprooting of the old party takes place. Continentally, the crystalisation is slower.

Charismatic leadership and dynasty-making are global phenomena, but in the Indian setting the scenario is more complex. We are an old civilisation, a sprawling, multi-cultural sub-continent, not an uncomplicated, single-nation State. Our mindless politicians, working within the framework of a small, inter-connected elite, tend to skirt this very stubborn fact in their short-cuts to total power. And they come a cropper, doing immense damage to the progress of our people. It is strange how a person as experienced as Indira Gandhi can so isolate herself from the new momentums visible in this sub-continent that she suffers from the delusion that her sons will rule after her. First, Sanjay. And, now, Rajiv. Can India be declared the private property of this family?

What is quietly forgotten is that this property is now seven hundred million people at various levels of affluence and deprivation—and becoming increasingly unmanageable under highly centralised rule. When we speak loosely about the breakdown of the system under which we have been living, we are in fact saying that power has to be effectively decentralised and ways have to be sought to encourage public participation in its exercise. Only then will we be able to make the democratic process relevant to the rising hopes and aspirations of our people.

The political and economic stirrings now visible are essentially around this problem and we are likely to see much experimentation in forms and movements. We certainly have the potential for pioneering many significant federal concepts and structures.

It is patently absurd to attempt to rule a complex sub-continent from a single point of power, let alone through a dynasty. In the early years of our freedom, this was possible and even necessary. Today, the aspirations which once motivated a tiny elite are shared by rising elites in the regions. They resent the endless visitations to Delhi to get the smallest things done. An admittedly vague but powerful urge exists to evolve a system which is responsive to India's new level of continental development. Naturally, the stupid ambitions of Indira Gandhi and her family to equate the stability of India with a centralised exercise of power have come under an increasing number of question-marks.

If there are still large numbers of people who tend to drift along with the present unsatisfactory state of affairs, it is because no purposeful continental alternative has formed. The rise of regionalism in various parts of the country, and with varying textures, will keep spreading as an act of self-preservation. Ultimately, these regionalisms will certainly coalesce into a continental formation which represents a careful, non-extremist consensus. But it is important to focus on this problem and to speed the transition. Dynastic rule, myth or reality escalates the damage to the democratic process the longer it lasts and must be removed. In a sense, this is the first step in salvaging our federal polity.

It is surprising how extensively dynastic aberrations pursue us. In politics, at so many levels, wives, sons and daughters imagine that it is their historic right to command the power that their husbands or fathers did. In the area of economic activity, in business the same passion rules although one family after another is torn with dissensions and really unable to throw up professional managers. In culture, so much of the scene is shadowed by the cultivation of family expertise and exclusivity. All this dynasty-making is making us very much a part of the human condition. It is a reflection of uncertainties and insecurities in our society. Unless professional systems and institutions develop deeper integral roots, and strengthen the necessary accountabilities, there is a stubborn reluctance to submit to genuine "democratisation".

Leaderships based on corrupt politics, practise, on gangster mafias and on dynastic tactics and strategies cannot lead today's social transformations which demand new value systems and totally different attitudes to development. We now know that in an old civilisation, where many centuries are telescoped into one, economic growth does not automatically bridge the gulfs between the rich and the poor. In fact, it accentuates them. The very compulsions of the situations prevailing in India and China will make them experiment in alternatives covering education, health, housing, transport, employment, science and technology, modernisation and what goes under security systems, national and international. So many of these vital areas of human development are the most neglected in our thinking and governance—indeed, the first to be axed when funds are short.

A structural transformation of our society to make it relevant to 1,000 million people requires sensitive organisations and institutions able to reflect the interests of these people at every level of governance. This means that collectively they should be able to insulate our society from the disruption of ambitious individuals and families. In other words, we have to seek a participative and just society with all its healthy responses and institutions.

Our local dynasty-makers, or supporters, are in direct opposition to these perspectives. I believe that they are a very real source of danger to the future of India and must be reduced to an ugly memory in the shortest time possible. Any compromise will dismember this land, and ultimately disintegrate it for the benefit of those who seek global influence and power. ■

→

Of Apostolic Succession

K.R. Sundar Rajan puts forth the view that it was Motilal Nehru who was the real originator of the Indian experiment in dynastic democracy, when he pleaded with Gandhiji to make his son, Jawaharlal, the Congress President after him.

WRITING in the *Weekly* more than a quarter century ago, Nirad Chaudhuri, that infuriating demolisher of myths, observed that "there is no greater risk in India today than the absence of outstanding politicians. To deliver the government of the country to the common man is to hand it to the lowest adventurers, men who have the predatory urges of the beasts of prey but not their strength or claws and fangs. It is to opt for anarchy, for in India the sole alternative to the hero is the faction."

Chaudhuri pointed out that the really dangerous prospect for the country was that there would be no person big enough to be the object of the personality cult. He considered the possibility of a continuation, as he put it, of "the present politico-spiritual dynasty by apostolic succession."

I am sure Chaudhuri does not like the idea of Indians handing over their problems to a dynastic leadership. What he meant in his article was that the Western-type democracy, with its emphasis on reasoned choice, is not good for India and that the people would instinctively opt for what he called "plebiscitary dictatorship" which, according to him, was the system under Nehru.

Mrs Gandhi did not invent dynastic rule. She has only tried to perfect it. The concept is not alien to the Indian psyche or ethos. At the same time, it would be an oversimplification to say that as a people we "crave" for the return of kings and queens. If it were so, we could as well wind up the present democratic system, revive the old monarchical order and begin to enjoy a sense of ever-lasting security. That would mean the undoing of whatever democratic advance we have made in a hundred years, a facile solution rooted in utter despair and cynicism.

Fortunately, things are not that bad. Indeed, while Mrs Gandhi's dynastic experiment is not a myth any more, it has run into some hopeful trouble.

A well-established dynasty fascinates many Indians mainly because it is regarded as a focus of stability and security. Gandhiji did not plan to foist Nehru on his countrymen in the dynastic sense but he did designate him as his successor. Thus, he subconsciously answered the question "After me, what?" It is also well known that Motilal Nehru insistently pleaded with Gandhiji to make Jawaharlal the Congress President when his (Motilal's) term expired. Some observers have argued that Motilal Nehru was, therefore, the real originator of the Indian experiment in dynastic democracy!

"A WELL-ESTABLISHED DYNASTY fascinates many Indians mainly because it is regarded as a focus of stability and security."

Did Nehru groom Indira for the prime ministership? Nehru was too much of a democrat to think in terms of a dynasty. Had he any such intention, nothing would have stood in his way since he was vastly popular and, in the last years of his life, most Indians were tormented by the question "After Nehru, what?"

But Nehru did visualise a leading political role for his daughter. In 1959, he agreed to the proposal to make Mrs Gandhi the Congress President. Whether he inspired the proposal or it originated from Kamaraj, Lal Bahadur Shastri and others close to Nehru is not known.

When the Chinese invaded India in 1962, Nehru set up a Citizens' Council in which Mrs Gandhi played a key role. Since the council included the Chief Ministers of States, Mrs Gandhi got an excellent opportunity to operate in the power structure at another intimate level.

But in fairness to Nehru it must be pointed out that he did not create a situation in which Mrs Gandhi could have found it possible to function as an extra-constitutional authority. No senior Cabinet Minister kowtowed to her and no Chief Minister journeyed to Delhi to take orders from her on behalf of her father. And no bureaucrat considered it worthwhile to "cultivate" her friendship.

At that point of time, it is doubtful whether Mrs Gandhi herself seriously toyed with the ambition to become Prime Minister some day. While the prospect might have been tempting, there were many stalwarts still around and the undermining of inner-party democracy was far from Nehru's mind. Thus, when Nehru died, it was Shastri who succeeded him. He took Mrs Gandhi into his cabinet and this is when her ambitions began to crystallise. The sudden death of Shastri in Tashkent paved the way for Mrs Gandhi to rise to real power.

Mrs Gandhi's dynastic experiment could not be compared to Motilal's desire to see Jawaharlal as the head of the Congress or to Gandhiji's preference for Jawaharlal or to the latter's desire to see his daughter as a politician in her own right. These were all entirely legitimate desires stemming from natural human impulses and political considerations.

But what Mrs Gandhi began to do around 1971 was to groom Sanjay as part of a systematic, deliberate succession plan. This has been written about so extensively and in such detail that it is astonishing that some people still want proof! Perhaps these well-intentioned people would like to clutch at something to assuage their fears about Mrs Gandhi's real intentions.

By the time the Emergency was clamped down Sanjay was operating as the unofficial Deputy Prime Minister and often as the Prime Minister. Mrs Gandhi often asked Ministers and senior officials to discuss important matters with her son before seeing her. Though he held no position in the party or the government—he was not even a Member of Parliament—he made key policy statements. It is common knowledge that Sanjay was also privy to the government's financial policies including tax proposals.

In the party, Sanjay enjoyed even greater powers than in the administration. Realising that their future fortunes depended on him, party stalwarts (if they could be so described) worshipped at his altar with the kind of abject servility not witnessed even in the court of the Mughals.

According to Mr T.A. Pai, who was a Central Minister, Mrs Gandhi declared the Emergency partly to facilitate the rise of Sanjay to unbridled power and to prevent press publicity for his costly misadventures, including the Maruti fiasco.

I wonder whether Mrs Gandhi herself believes that she did not deliberately groom Sanjay to be her eventual successor!

When Sanjay died, Mrs Gandhi could have made a clean break with her dynastic experiment and begun the process of restoring

party democracy. But she now turned to Rajiv to fill the vacuum. The more Rajiv was tormented by doubts about his political potential, the more Mrs Gandhi goaded him to give up his flying career.

In fairness to Rajiv, it must be said that he entered active politics with the utmost reluctance. In retrospect, he must be repenting the decision. The electoral debacle in the South in which he played the second leading role showed that it is *not* entirely in Mrs Gandhi's power to create a durable political dynasty. As they say, there is many a slip between the cup and the lip!

The defeats in Andhra Pradesh and Karnataka provided yet another opportunity to Mrs Gandhi to abandon her dynastic exercise. But she made Rajiv one of the General Secretaries of the Congress (I). The next step will surely be the installation of Rajiv as the Congress President. But the journey from that point onwards is not going to be smooth. Mrs Gandhi may return to power again in 1985 but she will find that holding on to the prime ministership is going to be an increasingly difficult and uncertain job, not to speak of grooming Rajiv for it.

In a sense, Mrs Gandhi's dynastic experiment has already been doomed. The only thing clearly within her power is the grooming of Rajiv as the Leader of the Opposition within a decade, if not earlier.

One wonders whether Mrs Gandhi or Rajiv has drawn any inspiration from the dynastic experiment in Kashmir where, shortly before his death, Sheikh Abdullah managed to make his son Farooq his successor. The "Lion of Kashmir" had worked on the project for some three years in the course of which he even threw out of his party Mirza Afzal Beg, his life-long colleague and mentor, because of the suspicion that the latter was trying to sabotage the experiment. It is anybody's guess how long Dr Farooq Abdullah will be able to keep the ruling National Conference united under him. Intrigues against him are brewing and G.M. Shah, his brother-in-law, is busy organising his own clique. The first test for the Abdullah dynasty will come when elections to the State Assembly take place later this year.

Mrs Gandhi told a foreign journalist recently that no dynastic exercise is taking place or has ever taken place under her. She described the Nehrus as a political family. What she meant is that politics came to Sanjay and Rajiv naturally as it came to her when her father was the Prime Minister. In this connection, she referred to political families in the West like the Churchills and Kennedys.

But the important difference is that Winston Churchill and John Kennedy rose in politics the hard way. They did not become virtual Prime Ministers or Presidents even before they began their apprenticeship in politics. No sensible person would have objected if Sanjay had started public life as a member of the Delhi Municipal Corporation or Rajiv had contested a seat in the Delhi Metropolitan Council. But, thanks to their mother, they became instant national leaders.

Mrs Gandhi has tried to ridicule the debate on her dynastic experiment by repeatedly pointing out that in a democracy it is the people who decide who is to be their Prime Minister. But in her brand of democracy, a situation must be created in which the people have no choice.

Perhaps, Mrs Gandhi is right after all. The people may formally decide that there is no need for a dynasty and that the kings and queens should be confined to the history books and to fairy tales. ■

People's Choice Will Prevail

Having a political leader in your family tree is no disqualification so long as no undue favours are asked for, says Union Minister for Chemicals and Fertilisers Vasant Sathe.

THE crudest example of the infamous Goebbelsian technique of repeating a lie hundred times and fostering a myth is the genesis of this myth about dynastic rule. Strangely, even our newspapers sometimes create myths and fall prey to their own creatures, so much so that for them dynastic rule has become an issue to be hotly debated. It is just as well that the WEEKLY has taken up this topic for discussion, now once and for all the lies can be nailed.

We must first consider the meaning of dynastic rule. The simple meaning is that the rule must devolve on the heir as a right. In a monarchy, dynastic rule is taken for granted. In the case of owners of industry or a business or vocation, succession by an heir is not only presumed but acclaimed. It is only in democratically governed countries that the debate on dynastic rule becomes meaningful. The basic question to be asked on this issue is: Do we have faith in democracy? Because, if we do, then the concept of dynastic rule gets nipped in the bud. Once we say that we have faith in democracy and faith in the people that they are sagacious enough to choose not only their leaders but also the political parties to govern the country, then to question the people's choice is to question democracy itself.

NUSRAT BHUTTO accompanied by daughter Sanam before boarding an Airfrance flight to Paris where she was to undergo treatment for suspected cancer following the Pakistan Government permission to leave the country.

The people of India have amply demonstrated again and again their intelligence and capacity to take independent decisions without fear or favour. Very often even the vocal media, newspapers and magazines, has not been able to anticipate the mind of the common voter. The people of India have shown that they have imbibed both the letter and spirit of democracy. Under these circumstances, how can we postulate that the people will accept and elect a person as a leader even if they do not like or want him or her?

Now let us consider the context in which this bogy has been raised. No one, it is hoped, seriously contends that being a son or daughter of some important political leader is by itself a disqualification. What is objected to is the so-called *imposition* of such a person.

Take an example from one of the biggest democracies, the US: no one has questioned the selection of one Kennedy after another.

In Pakistan or Bangladesh if democracy were to be restored tomorrow and if members of Bhutto's or Sheikh Mujibur Rehman's families were elected by the people, no one in his senses would question or condemn it as dynastic rule. I am sure that even the most vociferous critics of Indira Gandhi would not raise their voice in protest if Nusrat Bhutto in Pakistan or Hasina Begum in Bangladesh were elected leaders.

In India, after Jawaharlal Nehru, the Congress Party elected Lal Bahadur Shastri as its leader and Prime Minister. Again, it was the Parliamentary Party of the Congress under eminent men like K.Kamaraj which elected Indira Gandhi leader. When people talk →

oosely on this subject they are unthinkingly casting aspertions on the intelligence and ntegrity of some of our renowned leaders.

But, apart from the fact that Indira Gandhi was elected leader by democratic parliamentary process, the point that the people of India endorsed the choice is being conveniently ignored by the breastbeaters obsessed with the dynastic cult-phobia. The very people, often dismissed as illiterate and gullible by these champions of democracy, did not hesitate, when they were dissatisfied, to reject the leader mercilessly through the ballot box. Having given a whole-hearted opportunity to others, when the people saw that their hopes and aspirations were betrayed, they had no qualms about punishing these self-seeking men and rejecting them at the first chance they got to register their votes. Has it not been sufficiently established that no political leader or party can take the people of India for granted? All theories of money, power, caste and communal combinations, etc, have proved false. If the politicians in their narrow self-interest betray the people and in the process discredit the whole political system, they can blame no one but themselves for the consequences.

Hence, as long as leaders are responsible enough to place proper choice before the people, we can rest assured that the people will play their part in preserving democracy in this country. But if the political leaders, blinded by narrow selfishness, fail, the democratic structure of the country may succumb to divisive and fissiparous forces and in the process the entire civilian authority will get discredited. If this happens, as has been witnessed in all other countries where democracies have failed, in India also the military may be tempted to step in. Fortunately, the military has the noble tradition of keeping away from party politics in India. Secondly, India is too big a country to be controlled by the military which has a heterogenous composition. In such an event, India will just get balkanised. But in that case the question of dynastic rule will also not remain relevant.

Thus under no circumstances has the fear of dynastic rule, where someone belonging to a family can be imposed on the people of India against their wishes, any foundation.

Let us consider the case of Rajiv Gandhi. True, like the son of a doctor or a lawyer or businessman, he has the advantage of being born and brought up in a family where both his parents were totally involved in politics: right from the freedom struggle to the period of national reconstruction as an independent nation. Such a background would naturally influence the mind and character of any person. As said earlier no sensible person will consider this to be a crime. To be fair to Rajiv, he has displayed a sober and balanced temperament, an intelligent understanding of the problems and capacity for dedicated work. He is a person with a modern scientific temper and understanding of technological needs, something highly essential for any developing country which wants to achieve a faster rate of growth. A leader with these qualities from any other political party would have surely been eulogised.

And yet, with all this, no one can say (other than fortune tellers!) that Rajiv will be accepted by the people of India as their leader. Much will no doubt depend on how he can mobilise the Congress Party and inspire confidence in its rank and file. But much more will depend on how he becomes a symbol of unity and hope for freedom from poverty for the people of India.

In the meantime, it would be better for the opposition parties, both in their own interest and in the interest of democracy, to set their own houses in order; to try, if they can, to rise above personal self-interest and provide a viable alternative at the national level.

All elections, including those of Andhra Pradesh, Karnataka and Delhi, have shown that politics of personal criticism and abuse hardly cut any ice or bring any dividends.

Think of something better, Mr Goebbels! Sorry, Mr Vajpayee! ■

The Dynastic Debate

Nachiketa interviews Lal Krishna Advani, Chaudhury Charan Singh and Kamlapati Tripathi in Delhi while Rina Kamath in Madras talks to M. Karunanidhi on the emotive subject.

"THE ROOT OF IT ALL lies in Mrs Gandhi's incapacity to trust her colleges," says Lal Krishna Advani (seen at an exhibition of advertising and visual publicity).

Lal Krishna Advani, General Secretary of Bharatiya Janata Party: I don't think there is any doubt now that Mrs Gandhi is grooming Rajiv as her successor.

I recall that during the Emergency a very perceptive article on the mental make-up of autocratic rulers appeared in *Quest* (November-December, 1975), a quarterly from Bombay. The censors perhaps missed the article or else the journal would have been banned (or was it?). In this article, author Ashish Nandi observed:

"The first characteristic of such a ruler (autocratic ruler) is an inability to trust deeply and wholly. Though his flamboyant style may hide it for a long time, he lives in an inner world peopled by untrustworthy men. Even when he trusts some, it is transient. A chain of lieutenants comes in and goes out of his favour in a manner reminiscent of people getting in and out of a railway compartment.

"The ruler suspends this suspiciousness only in the case of his family members, men recruited from outside politics to act as commissars and politicians who have no independent bases and are fully dependent on him..."

If today Mrs Gandhi is grooming her son Rajiv Gandhi to be her successor, it is not

"FOLLOW MY LEADER," SAYS KAMLAPATI TRIPATHI.

—N K SAREEN

"I WON'T!" SAYS CHARAN SINGH.

—PRAVEEN KUMAR

M. KARUNANIDHI

because she regards him as one most qualified for the job, but because he is the only person in her party whom she can trust, or rather, as Nandi put it, in whose case she is willing to suspend her suspiciousness.

Indeed, her incapacity to trust colleagues is Mrs Gandhi's biggest failing. It is, therefore, that she keeps imposing Chief Ministers on the States. It is this again that makes her unwilling to delegate authority. Decision-making, even in the matter of trivia has become concentrated at 1, Safdarjang Road. Mrs Gandhi's commitment to the concept of dynastic succession also has its roots in the same failing.

Whether this bid for dynastic rule will succeed or not is still an open question. Enlightened public opinion abhors the idea. It is repugnant to democratic values. But the Ruling Party has willy-nilly accepted it. This also must be acknowledged that in the masses at large there does exist a feudal streak which the Ruling Party hopes to exploit in favour of the dynastic concept. In fact this must have been an important consideration which, way back in 1966, weighed with the Congress bosses when they backed Mrs Gandhi as against Morarji Desai for premiership.

Pandit Kamlapati Tripathi, Working President of AICC (I), MP: I don't want to say anything on this subject. There is no such thing as dynastic rule. All this is a conspiracy to malign a very great person. Yes, Mrs Gandhi.

Mrs Gandhi is my leader, I am her follower, her strongest follower at the moment.

Don't ask me these questions. I have myself been a journalist for 25 years. I have interviewed all the big people. So I know all the tricks.

What about Rajiv? He is a General Secretary of the Party. I am the Working President. I appointed him as General Secretary. He is doing well. Everything is all right. There is no dynastic rule.

Chaudhury Charan Singh, MP, President of Lok Dal (C): Yes, Mrs Gandhi seriously believes that Rajiv Gandhi can be her successor. Because she believes she can fool all the people all the time. So the grooming of Rajiv is on.

To achieve her goal Mrs Gandhi might try to become the President herself and make Rajiv the Prime Minister through a constitutional amendment. This is one of the possibilities that I can see. What exactly her *modus operandi* will be I cannot say.

However I do not think she will succeed. (The country as a whole, the masses will never accept.) Though the sycophants in her party may try to do her bidding but all this will depend on the totality of circumstances.

Rajiv has no qualification for the job. His advantage lies in the fact that his mother is Prime Minister of the country. My feeling is that her sycophant party leaders may hail him at the moment but when it comes to an immediate choice between him as the Prime Minister or somebody else from among them, they would not opt for him. The Congressmen themselves would not allow this to happen.

There is no doubt that one of the reasons for her success has been the fact that she was Nehru's daughter. The surname Gandhi attached to her name has also been a factor.

This has been helped by the ignorance of our masses, two-thirds of whom are illiterate. That is why this concept of western democracy which is the most difficult form of government has not been assimilated by them. They have not been allowed to become enlightened and educated because their ignorance suits the Congress Party.

At one time in our history we had our own democracy. We had republics: kings were elected. Panchayats were the strongest units of government but hundreds of years of foreign domination have eaten away those traditions from our polity. We are now hero-worshippers. Monarchical traditions have taken roots. But still I believe people abhor it (Rajiv's succession), they dislike it.

His voice has a soft rasp after the punishing campaign for the Tiruchendur by-election, where the DMK suffered a stunning reversal after an encouraging lead. M. Karunanidhi, the firebrand DMK chief, proved to be a seasoned politician, pleasantly but deftly handling the sensitive question of dynastic succession with shrewd caution;

A leader cannot be forced from the outside; leadership qualities have to come from within. In Mrs Gandhi's case, no doubt the fact that she was Nehru's daughter appealed to the North, and because she was backed by Kamaraj her succession was accepted in the South as well. But she has proved herself and that is why we supported her in 1980.

I had occasion to move with Sanjay Gandhi a few days before his death. Yes, I was conscious that he was being well groomed but I felt that he would be capable. I don't know about Rajiv Gandhi. To my mind, it does not seem important if there is deliberate attempt to groom him. One may get an opportunity, but one has to prove oneself. If Jayaprakash Narayan had chosen Jagjivan Ram instead of Morarji Desai, who knows? Things may have been very different.

Our electorate is largely economically deprived and illiterate which is why they are unenlightened. This is why you cannot compare it to Western democracies. In the present Indian conditions, anything may happen. It is impossible to prophecy. ■

Nation's Destiny

Mrs Gandhi Must Think Big

In India, as in Nehru's case in his lifetime, there is no alternative to Mrs Gandhi—as yet But P Ramaswamy feels that her task has gone beyond merely holding power and responsibility She has to secure a new destiny for the country, in other words, she has to fulfil her duty to history

ONE of Mrs Gandhi's *obiter dicta* is victory or defeat in elections is irrelevant to an individual's or a political party's service to the country Jawaharlal Nehru used to say that, too Nevertheless, they won the elections all the time

But times have been changing Mrs Gandhi did see defeat and lose power though she won it all again Andhra Pradesh and Karnataka have shown that it can happen Everyone knows that the Delhi Metropolitan Council elections are not the complete answer

In India therefore, as in Nehru's case in his lifetime, there is no alternative to Mrs Gandhi—as yet Behind the facade of her image, however, a new picture is emerging One has only to take a look at the decade 1970 80 to see that Frightening shadows of a new power trinity are slowly spreading from one end of the country to another, threatening the constitutional government over which Mrs Gandhi today presides If one is inclined to rhetorics, one may say national polity is in the melting pot

The Indian Constitution projects a democratic society and a system of government which embodies the popular will It contains the framework for adequate checks and balances, with regard to both the people's rights and the limitations to these rights It has created institutions through well-structured devices like an elected Parliament and State legislatures, a multi level judiciary, autonomous authorities like the Auditor-General, the Union Public Services Commission (with similar bodies at the State level), the Vigilance Commission, and so on Rules and procedures have been laid down for the conduct of government departments and the public services If these are implemented in the letter and spirit in which they were created, the country should have a well-balanced and progressive society

Three decades after elections were first held under the Constitution, what is the picture this society presents? The old leaders have all gone, and the only noteworthy link we have with that school is Mrs Gandhi, who was nurtured in that tradition and today stands at the junction between the past and the future There has been, therefore, some

PR TISHNAIDY

continuity and, on the whole, the record of history has run smoothly There has been multi faced development, there has been growth, industrial and otherwise, and there have been mighty big efforts to achieve the social aims of the Constitution

But, if any student of history rests at this point, he will be making a grave mistake During the last few years, there have been trends and events which call for deeper analysis During the days of the British Raj, too, there were crimes, the police and the courts, and there were cases of corruption and offenders were tried and punished In recent years, while all this corrective machinery has existed and, in fact, been expanded to cover larger areas of public activity, social offences have been increasing and have alarmed thinking people They have not only increased in numbers and dimension, but are taking the shape of a malaise which threatens to thwart the task of government and, since government is the manifestation of the Constitution at work, the Constitution itself

Take the Judiciary for instance An eminent jurist (Mr V R Krishna Iyer, a former Judge of the Supreme Court) said recently that justice is administered in the public view (which is one of the ways by which the integrity of the Judiciary is ensured) when either party places its case before a judge, with supporting evidence subject to cross-examination of witnesses and so on The judge has to give his decision on the basis of facts presented in court When lawyers fight for individual clients, it is a battle of wits based on facts and the law But when it is a case between a citizen and the state, be it a case of culpable crime or a citizen's right, it acquires the significance of a constitutional issue, directly or indirectly, and the larger public is affected The fundamentals of jurisprudence come into question The judge, in such cases, is in a difficult situation He can make a judgement only on the basis of facts presented to him In spite of his being an able and independent judge, the fallibility of the Judiciary can be called into question if the administration (say the Prosecution) does not, deliberately or otherwise, place the full facts of a case before the court and the other party has no access to them Who curtails the independence of the Judiciary in this case? Obviously, the Executive, which, according to this great jurist, means that unless the Executive is independent (and impartial), the Judiciary cannot *ipso facto* be independent

The role of the Executive is indeed extremely important All the more so, since the Judiciary is helpless without its support If a presiding judge is threatened with physical danger, his defence lies with the police and other instruments of security

Why should the Executive not be independent? An administrator at any level has only to administer He has no axe to grind His obligations are defined in the Constitution and the rules framed thereunder Why, then, should he disclose some facts and conceal others before a court of justice? In recent years, investigating journalists have exposed deliberate distortions, suppression of facts, etc, by the Executive and even *suppressio veri* and *suggestio falsi* to Parliament, to ensure that an Executive lapse does not come before a court of law Where is the independence of the Judiciary or the sovereignty of Parliament or the sanctity of the Constitution?

Let us take a more general case One of the objectives laid down in the Constitution is the gradual elimination of economic disparities between the rich and the poor, more popularly termed the prevention of the rich becoming richer and the poor poorer Every department of government is geared to this function They have been given powers, extraordinary powers, to which democratic-minded critics have often taken exception, as in the case of departments exercising powers of control to regulate and channelise economic growth or to collect revenue from sources like income tax, customs, excise, and so on Unless these departments function with rectitude, the legal or

constitutional machinery of the state is made ridiculous.

Cases of how funds are collected by politicians in practically every State, partly for the party, partly for urgent election expenses and partly to fill personal coffers, and the devices employed to mobilise funds (it is doubtful if any political party is untainted in this regard) make a mockery of the moral values the leaders of the freedom struggle fought for.

There are two views about such an assessment. One, believed to have been tacitly accepted by leaders like the late Sardar Vallabhai Patel and his friends is: What does it matter if a few clever people make some money so long as a city improvement scheme or multi-storey building project gets implemented? Pandit Jawaharlal Nehru did not subsribe to this view as far as we know. His "temples of tomorrow", at least to his knowledge, did not allow political intrusions. Nehru frowned on them Today, the politician does not collect money He "earns" it

The net result is that political power is won through nefariously earned money. An edifice is built up which sustains, and is sustained by, a framework of corruption. It is a continuous operation, a continuing game. If such a body of citizens come to wield power, any good they are able to do is incidental, and is due to the benignity of their leader Mrs Gandhi's objectives have still the weight and character of her father's philosophy But this is the only extent to which the Constitution is sustained by the party, for, in the process of accumulating political power, most of its objectives like socialism, fair play, equality and social justice are violated The politician who, on his election, vows to protect the Constitution, thus becomes an instrument which undermines it.

The result is that while the charismatic leader continues to save the Congress, the organisational mechanism, under the surface, has deteriorated so that politics has acquired an ugly connotation. The politician, as an institutional individual, has become largely suspect. However, there are still some, both in the ruling camp and in the Opposition, who have survived with their traditional values intact. But they have become effete in the operational arena.

The second of this emerging power group is an able but ruthless and unscrupulous bureaucracy.

It is logical that in this process the bureaucrat ceases to be a "public servant" (to give the right meaning to the term) and becoms a little *satrap* in his own empire or, if he is different, a nuisance to his conforming colleagues. Either way, he becomes a weak institution if not an accomplice and an accessory to the politicians. It must be mentioned that these comments are made in relation to bureaucracy as an institution as it works today and not to individual bureaucrats, some of whom are shining examples of integrity.

On the whole, however, a system is taking shape by which an official's talent is judged not by his ability and integrity but by his willingness and drive to accomplish projects which a politician in office has set his heart on.

Then there is a third core of authority which is developing a stake and share in this power game He is the muscleman, the criminal, the thug, the smuggler, the dacoit, who is at hand for any "tough" job for those who want his services. Politicians and their partners in the financial game draw their bodyguards from this cadre. If a police station is raided and even arms are stolen and if the culprits are not traced, you should know why. Wherever these cases occur, more often than not they are well shielded by authority. An honest official—we still have such people—who is deemed recalcitrant has often to make the supreme sacrifice to save his honour. His family has to go underground, at least figuratively.

In many cities, and even in some villages, there are such people who rule with the might of the muscle and are ready to offer their services to those who need it. Such "strong men" have developed ambitions of being the power behind authority and thus become another factor to nullify the Constitution.

This is the merging state of the nation over which Mrs Gandhi today presides. She wields enormous power, which implies a tremendous load of responsibility, and she represents an image on which the strength and unity of the country and the stability of the Government depend. Power and responsibility are not, however, the end of the road for Mrs Gandhi. For one thing, in the increasing complexity of the political power structure, a stage has been reached when it is extremely difficult to continue in power without being an accessory to the deteriorating crisis if not a factor in it. Her political acumen, which has been universally acclaimed as tantalisingly unique, has enabled her, to our perplexity, to overcome crisis after crisis. The recent setback in the south may have alarmed many hardened politicians, but she took it in her stride and kept her poise, attributing these developments to obstacles which could (and would, no doubt) be met. And when the Delhi Metropolitan Council results came, her equanimity was vindicated.

In the mean while, as political leader and head of the Government, she has announced remedies like toning up the administration as well as certain political adjustments. There may be two views about the Non-Aligned Summit, as there were about the Asiad, one as a distraction from national priorities and the other as an opportunity to strengthen the authority and image of her leadership. At the same time, it has a vital validity in the international context which is a matter of deep concern to the country, both short term and long term. Whatever it may be, these developments have little relation to the simmering political crisis except to sustain the image of the leader as one with imagination, vision and ability.

Two facts follow from the analysis of this situation. The first is Mrs Gandhi's own identity as the best available safeguard to national stability. The second is that the constitutional set-up, despite all the ravages it has suffered, still holds. But how much longer is the question.

The answer to this question can be given, perhaps, only by Mrs Gandhi. For she alone has the strength to keep her feet on the ground and look ahead. Her task has gone beyond holding power and responsibility; she has to secure a new direction for the country—in other words, her duty to history.

The instruments for this task are, of course, her power and responsibility, but the means as well as the goal have to change. Answers have to be found for the malaise.

Perhaps an answer is implicit in the manner in which the crisis developed. It grew when the perspective of politics changed from one of service to one of power. The gap between those who govern and those who are governed has widened. It is obvious that with the present instruments of authority, corrupted by various circumstances and causes, it is impossible to fill this gap, because the instruments have lost their use. The whole system has lost credibility.

The answer lies not in a political facade of a Kamaraj plan but in a genuine return to organisational work through the Congress which, fortunately, still has deep roots all over the country It is worth remembering that it was from 1969 onwards, that is, from the first split, that the social disruption of the great national organisation began. Most of the democratic forces now opposing Mrs Gandhi's Congress are composed of ex-Congressmen, a good majority of them (at least at the lower levels) different from the type which has given birth to the "power trinity" mentioned earlier.

A parallel mass movement—a courageous move which only Mrs Gandhi could attempt—has to be started without the slightest delay to reshape the Congress and overhaul the political machinery in order to bridge the gap between the masses and the leaders, restoring political credibility at every level—the panchayat, the taluka or farca, the district and the pradesh—so that the masses see their leaders not as wielders of power but as servants of the people. The men who have made money and flaunted authority have to give way to make wealth and muscle irrelevant. Centralism, to be stable, has to have the widest base possible and not a few spikes at vulnerable points.

Mrs Gandhi has to take a look, beyond the horizon of power and responsibility, at what she owes to history and the traditions and values for whose resurrection she is the sole hope today. Only those who have the strength can help the weak. Likewise, only those who have great power can make great sacrifices. ■

Where Every Drop Of Water Counts

by Girija Prabhakar

MADRAS: One week in Madras and I am both thankful for the blessings of running water and conscious, almost guilty, of the many litres I may waste in a single day, here in Bombay For three successive years the North-East monsoons, Madras city's major source of water, have failed and, now, its 4 5 million inhabitants are weathering the worst water crisis ever

Madras, even at the best of times, has never boasted of plentiful water supplies But, on no other occasion has the problem been especially as acute as it is today The city lies prostrate Of its three main reservoirs -Red Hills, Poondi and Cholavaram, Poondi and Cholavaram are practically dry Consequently the city's supplies have dwindled from a normal of 53 million gallons of water a day to 40 million gallons of water every alternate day The situation, is indeed desperate and dangerous

To combat this sad predicament, the Madras Metropolitan Water Supply and Sewerage Board, has sunk over 10,000 tube wells across the city Metrowater has also erected some 1,441 steel tanks, with capacities ranging from 1,000 to 3,000 litres, in different parts of Madras And lorries (the Metrowater fleet comprises about 150 of them) are used to fill these tanks at least once a day A point to be noted, however, is that these tanks have largely been placed in the slums and other "vulnerable" areas Schools, with the exception of the + 2s, were closed on March 31 at the Government's insistence Hospitals have been requested to perform only the most pressing operations, those which hold a threat to human life And, by the middle of June, water supplies to industries, decribed as non-essential, may be shut off as well Already, Central Government undertakings like the Port Trust and the Railways have been told to make their own arrangements for water Interestingly, this move has coincided with the Railway Minister's announcement that Madras be supplied with water by rail, the first consignment of which—of ten tankers carrying 50,000 gallons—has just reached the city

Advertisements, sponsored by private companies, advocating the careful usage of water and cautioning against waste appear frequently in both the English and vernacular magazines and newspapers The popular *Indian Express* columnist Harry Miller, though, reserves his words of appreciation for the efforts of the Parrys and Murugappa groups

Still, the activities of private companies are not restricted to the printed word Many, especially those with land in the Tiruvanmiyur-Mahabalipuram belt, have sunk or leased wells and borewells and they fetch water in lorries to the city (Not surprisingly, even petrol tankers have switched to carrying water) Individuals, fortunate enough to own land in this same lucrative belt, have also turned to water for profit They run tankers to the city too But all such water is very dear—an entire tankerful can cost as much as Rs 200 to Rs 300 (transportation charges which are determined by distance) Yet, if prudently used, these supplies can last up to a week, for the capacity of a single tanker is about 8,000 litres Nevertheless, as Metrowater is confined to every alternate day, this private supply of water, by individuals and companies has become both vital and indispensable to the people of Madras

One off-shoot of this supply of water in lorries is the opportunity it affords the crew, of both private and Metrowater lorries, of some easy extra income And, they are really very quick to avail of it Some of them sell water at around 30 paise a pot Still others, with more daring, offer bucketfuls at Rs two each But lorry drivers and conductors are not the only ones to make a living off water Enterprising labourers and even urchins offer to fetch and carry water from the numerous pumps, around the city, to private houses One family in Mylapore which collects its water thus estimated its expenses at around Rs 450 per month (Rs 20 for the labourer and Rs 10 for cycle charges, for each day) But, of course, the most favoured ones are those, who, by sheer chance, have pumps just outside their homes

KEEPING VIGIL Rows and rows of people with their pots stacked beside them wait for water in various parts of the city

—SUBHA NEWS PHOTO SERVICE

SUBHA NEWS PHOTO SERVICE

AN UNUSUAL RIDE AT AN UNEARTHLY HOUR This picture was taken at West Mambalam, an area of Madras city where the problem is especially acute

In an effort to prevent trafficking in water, police protection has been provided to Metrowater lorries and a squad of officials, headed by an executive engineer, has been formed to oversee the movement of lorries in the city There is no doubt that the Government means business For, the driver, cleaner and timekeeper of a Metrowater tanker who were detected supplying water to a cattleshed in parched Nungambakkam were suspended forthwith Also, the public, at the Government s request, have been advised to cooperate and limit their use of the water from their taps and tankers for drinking and cooking alone, as far as possible

If the poor are guilty of malpractices, the rich are even more guilty Metrowater has discovered that water, in some houses, is drawn directly from the mains, by using electric pump sets Raids, naturally, have followed, and, in some cases, the water connections have been cut off But, the exigencies of daily living have led the irresistible temptation of drawing water, without any difficulty, from the mains to prevail over the fear of detection And, a distraught government is now contemplating making water theft a penal offence

All these measures, however, have in no way resolved the crisis The needs of the poor have, to a fair extent, been looked after, and, the affluent look after themselves But the middle class has borne and continues to bear the brunt of so little water

Rows and rows of men, women and children, with rows and rows of empty pots alongside, queueing up in front of public taps and water tanks is a common sight And, what is more, they have to contend with Metrowater's odd pumping schedule which

ensures high pressure in the pipes at around 4 am Worse, the pressure eases towards daybreak and in a majority of areas, the taps run dry as early as 7 am Sometimes the long vigil yields but a bucket of water It is almost a whole year, now, that the city has not been receiving any water supply in the evening The areas of the city that have been affected the most are Nungambakkam, West Mambalam, Ashok Nagar, Gopalapuram, Mahalingapuram, Chintadripet, etc The list is endless Greenways Road, the home of the elite, Triplicane and Mandavalli, a low-lying area whose level is now a boon, however, are faring considerably better than the rest of the city

Since December last when the services of violin maestro Kunnakudi Vaidyanathan were enlisted—he played special ragas at Red Hills—to invoke the favour of the rain God, prayers and mantras continued to be offered And confounded by the hopelessness of the situation, the Government has proved willing to try any means, if there is even a remote chance of its working It is to fund experiments to be conducted at the Poondi reservoir to minimise evaporation looses, by spreading a layer of a chemical like cetyl alcohol on the water's surface If this method is effective, it is estimated that it will save about five to six million litres of water a day There is also a greater emphasis on the conservation and recycling of water The alternative of evacuating Madras city is also out of the question For, drought conditions exist elsewhere in Tamil Nadu as well The districts that have been severely hit are Kanyakumari, Ramanathapuram, Madurai, North Arcot, Pudukottai and Chingleput Even Thanjavur, Tamil Nadu's "rice bowl", which normally escapes "the clutches of drought", according to the White Paper presented to the State's Assembly by the Revenue Minister, has not been spared

All said and done, Madras, for the present at any rate, will have to learn to live with less water Recriminations against the present and previous governments for having abandoned the Veeranam project, after having spent Rs 22 crores on it, and for having failed to implement the Kattalai project to tap the Cauvery waters, due to escalating costs, are futile and serve no purpose And, despite the agreement with Maharashtra, Karnataka and Andhra Pradesh, whereby each has agreed to yield 15 TMC ft, the Krishna waters are still a long way off The best hope, now, lies in Madras' "ample ground water potential", to which UN experts have testified, the Government's proposed Rs 90 lakh scheme for exploiting this water south of Tiruvanmiyur and, of course, a good monsoon this year And God forbid that it should fail, for failure would be an extraordinarily frightening prospect for the city's 4 5 million people! ■

The Quiz Mountain

Words, Words, Words

Hamlet, I think it was, or should have been Words hide and they expose They are convenient, clumsy, effective, exasperating Sometimes they mean a lot, at other times they mean nothing More often than not they don't look like how they sound George Bernard Shaw spent a lifetime trying to set this right Finally he gave up in pain With a capital P as in Psychology The Americans have fared somewhat better How much do words count with you? Try this Quiz and find out

Score 2 marks for each correct answer The Quiz is mostly Uphill, so don't worry overmuch if you fall off the Mountain

A Noun for all Seasons

What is the meaning of
Aglet, Berm, Cissing, Dottle, Kerf, Harp, Kick, Tang, Snath, Placebo? Do not be obvious on Harp and Kick, please

And Nouns, Collective

A what of owls? And crows? And rhinoceros?

The Commonest Error

Logophiles say that the commonest spelling error, amongst simple words, is "ah-kom odet" Spell it, without writing it down

And Common Fears

What is "triskaidekaphobia" the fear of? And "agarophobia"?

Acronyms

What do the following stand for CREEP, SNAFU, KGB, GATT, TWER

And Other Diversions

You remember Mississippi? Three twin-letter groups? Now spell a word which has three twin letter groups, but following each other with no letter intervening It's so easy, you ll feel like cutting your throat when you see the answers

Answers

A Noun For All Seasons

Aglet The little plastic tip on a shoelace
Berm When you dig a hole and pile up the mud on to one side, the space between the hole and the mud pile!
Cissing The spotting and the separating of wet varnish when you apply it
Dottle Sludge remaining at the bottom of your pipe-bowl after you have smoked it fully
Kerf The first small groove the carpenter makes before sawing
Harp The metal thing that holds a lampshade on a lamp
Kick Indentation in the bottom of a bottle Fast vanishing
Tang The end of the knife-blade which fits into the handle
Snath The handle of a scythe
Placebo Harmless pill administered more for psychological effect on the disease Now jargon for "to soothe"

And Nouns, Collective

A parliament of owls Coined, I'm told by Ben Jchnson.
A murder of crows You see now, do you not?
A crash of rhinoceros Closer to truth

The Commonest Error

It's spelt ACCOMMODATE I am prepared to bet that you will forget it by next week Everyone, except stenographers

And Common Fears

Triskaidekaphobia is the fear of the number thirteen
Agarophobia is the fear of open spaces No chance

Acronyms

CREEP Committee for the Re-Election of the President This was set up by Nixon's aides and had a direct involvement in the Watergate affair
SNAFU An expression coined by the American Army, but is very relevant to our condition It reads, Situation Normal All Fouled Up Except that the American Army used a far stronger and more descriptive word for Fouled
KGB Komitet Gosudarstvennoi Bezopasnos ti KGB is somewhat easier In other words, the Committee for State Security President Yuri Andropov comes from the KGB
GATT General Agreement on Trade and Tariff Very much in the news these days
TWER Trade Weighted Exchange Rate Economic gimmick to demonstrate true exchange values Can mislead

And Other Diversions

Twin-letter-groups, three in succession? Very simple BOOKKEEPER How are you feeling?

—Partha Basu

Scoring

Our Score	32
Below 10	What did you say a CAT was?
Upto 25	A CAT is something which dogs chase up trees
Upto 35	A CAT means a small, domesticated feline
Above 35	A CAT means either Clear Air Turbulence or a Brain Scanner

"HAATHI AUR HOLI". An elephants festival was organised by Rajasthan Tourism on the occasion of Holi at Jaipur.

THE WORLD AROUND US

TASTING TEA DOWN UNDER The India Tea House Pavilion, put up by The Indian Tea Board, Sydney, in the city's Royal Easter show. March 25 to April 5 Visitors were offered the Darjeeling, Assam and Nilgiri varieties. At right is Dr N.P. Seshadri, Director, Tea Promotion, Sydney

PRESIDENT ZAIL SINGH receives a letter of credence from Vassily N. Rykov, USSR's Ambassador to India, at Rashtrapati Bhavan.

REVERING ST FRANCIS. Archbishop Angelo Fernandes releases a stamp to commemorate the 800th birth anniversary of St Francis of Assisi. Also present is the Union Minister of State for Communications, Mr V.N. Gadgil.

Sandeep Lost To Cricket?

ALL was over bar the clouting when it happened The Final Karachi Test between Pakistan and India had ceased to be a contest except for interest in whether Skipper Imran Khan would proceed to bag his 40th wicket in a series he had already wrapped up for Pakistan The Pak skipper was walking back to the top of his run when there came the chant in a chorus from the Women s Stand *Zeenat Aman ka ek hi bhai Imran Bhai Imran Bhai!*

This accord ng to *Dawn* of Karachi was the Pakistani women s sardonic way of referring to Zeenat s reported desire to marry Imran But Imran added *Dawn* had reportedly said he did not like fat women and hence would not marry the Indian film star Whereupon Zeenat is said to have gone on a crash diet

Which at least explains why her films have been crashing with such monotonous regularity at the box office As far as I known Debashree Roy s not so far gone on any such crash diet in an effort to make herself more presentable to Sandeep Patil hero of *Kabhi Ajnabi The* The media focus so far has been on Poonam Dhillon vis a vis Sandeep Patil But the key character in the film is Debashree Roy who enables Sandeep to rediscover himself as a cricketer after he has lost faith in himself and Poonam Dhillon

It is Debashree s big chance to make an impact and I pointedly asked Sandeep whether it had ever occurred to him that he was being merely *used* by certain people in the film industry to *build* themselves Sandeep the simpleton still said that if indeed they were using him they were welcome to do so for his part he remained as sincere in his approach to his role as to his game

This sincerity still comes through in Sandeep s talk there is no acting at least not up to now Nothing has hurt Sandeep more than my suggestion that he opted for films because it is easier to face Poonam Dhillon and Debashree Roy than Malcolm Marshall and Mike Holding—because there is more money in films (a couple of lakhs from a single movie) than the mere Rs 50 000 he would have got for the West Indies tour

Tell me have I ever gone after money during the brief period I ve been in Tests when my reputation s been good enough to cash in on the fact? he asks ' And I do definitely resent the suggestion that I ve shied away from confronting either Malcolm Marshall or Mike Holding No I ve never shied away from mere pace my Test record is testimony to that In fact what worries me is swing not pace Let someone bowl at 150 miles per hour I'll still stand up to him but swing it really puts me off I can t throw my bat at it like I can at pace!

'But what I asked "is the conclusion you expect followers of the game to draw when after having negotiated neither the pace nor the swing of Imran Khan too well you suddenly announce that you re unavailable for the West Indies tour?

I m sorry if the timing of my announcement led people to draw such a conclusion says Sandeep ' but what I ve found is that *no* time is the right time for me to draw away from the game and concentrate on my personal problem of seeking a speedy divorce As you know my divorce papers are pending in court and the next six months are crucial I wanted to finish with the whole thing earlier but they then said that England are touring India under Keith Fletcher and I mustn t miss the chance to take a crack at them Next when I tried to get the thing through they said I now had the opportunity of my first tour of England and was I going to be foolish enough to forgo the chance After that came the tour of Pakistan and again they said I was very definitely wanted to counter the pace of Imran Khan Therefore when in the process of countering Imran & Co I discovered that I had major fitness problems I said this was it—this was the time to attend to my shoulder injury and at the same time get the divorce proceedings off my chest

Once the divorce comes through I asked what are your plans?

I ll marry again the moment the divorce comes through! said Sandeep with an emphasis there was no mistaking

It was on the tip of my tongue to ask Marry whom? but better manners prevailed The grapevine has it that it is no one from films but a girl in Bangalore Match winner Chandrasekhar s marriage went on the rocks because he wanted to marry a Maharashtrian girl now we have Sandeep casting his eye at beauteous Bangalore So much for the Maharashtra Karnataka boundary dispute!

Boundaries they still flow in a thrilling cascade from Sandeep s bat Take his

WITH DEBASHREE ROY in producer music director Vijay Singh s Kabhi Ajnabi The Sandeep Patil here rebuts point by point the suggestion that he is now more concerned about the hour glass thin waist of Debashree Roy or Poonam Dhillon than the hour glass thin middle of India s batting!

PSIEC: Helping to grow Growing to help

Punjab Small Industries & Export Corpn. Ltd., ever since its inception in March, 1962, has been like the legendary tiny plant growing into a giant tree, extending its numerous branches in different directions to bear multiple fruits. Distribution of raw materials, provision of infrastructural facilities, marketing and technical & export assistance are some of the services rendered to stimulate the growth of small scale industries in Punjab.

Cutting across the borders of the State, PHULKARI, Emporia wing of PSIEC, is capturing the hearts of connoisseurs of brassware, ivory, cut glass, silks, wools carpets and the lot at Delhi, Calcutta, Bombay and Kanpur.

A special Handicrafts cell has been created within the Corporation for the planned development and promotion of State handicrafts.

Goods produced in tiny workshops of Punjab are now finding their way to sophisticated markets in USA and the Western World through PSIEC. Engineering skills acquired through generations are being passed on to developing countries through the export of turn-key projects.

IN PSIEC WE THINK BIG
OF WHAT YOU MAY
CONSIDER SMALL IN INDUSTRY.

THE PUNJAB SMALL INDUSTRIES & EXPORT CORPORATION LTD.
BATRA BUILDING, SECTOR 17-D,
CHANDIGARH - 160 017.

batting in the recent Karnataka-Bombay Ranji Trophy Final, when the Sandeep Explosion rocked the Wankhede Stadium.There were 14 fours and 4 sixes in his 121 not out that time. And those 121 runs came off 96 balls—his second 50 being taken off 24 balls in 25 minutes.

It was the kind of controlled aggression which made Henry Blofeld predict on the tour of Australia, as Sandeep hacked Lillee and Pascoe, that Patil will go on to win Test matches for India. What was Patil then doing at the Wankhede Stadium when he should have been at the Queen's Park Oval, taking on the big guns of the West Indies rather than the light ammunition of Karnataka? The way Patil fired away that day, the idea of any shoulder injury seemed a myth.

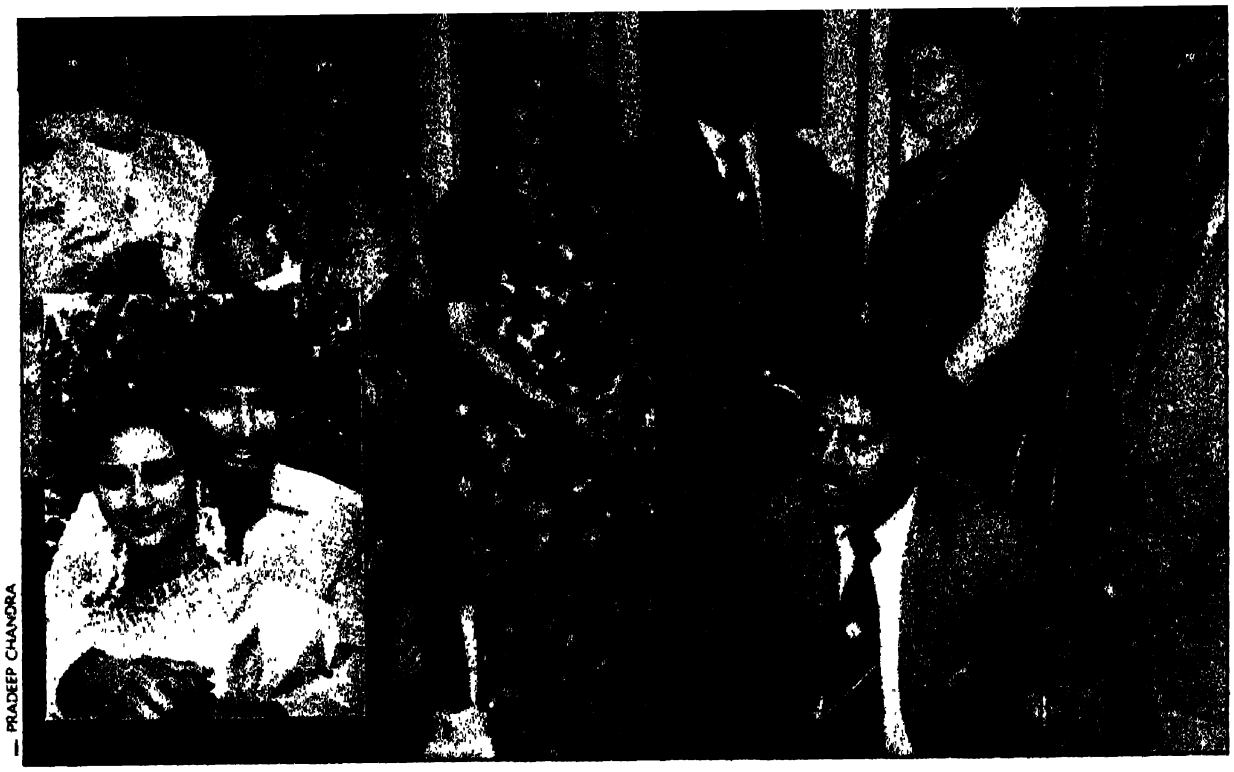
"No, I'm not fully fit," Patil says when you ask about his shoulder "What you need at *Test* level is peace of mind and this is just what I don't have at present I know you wrote that, when I go to the middle, I must be professional enough to leave all my personal worries at home, but I'm sorry, I'm not made *that* way I'm an instinctive cricketer, I never plan my game I've tried hard, but I can't be my normal self in the middle while there's this divorce case weighing on my mind And I *do* have fitness problems at the moment, whether you believe me or not I'm just not in a position to give of myself cent per cent, mentally and physically Once I feel up to it, I'll be back "

"But what makes you think they'll want you back at the time?" I asked. "India's middle order is already overcrowded Now that you've made room, naturally there are others to occupy your place."

"Such thoughts never bother me," says Sandeep. "Once I feel I'm ready for it again, I'll strike out for my place. If they want me they'll pick me—otherwise no regrets. It's a great honour to play for India, but I'm happy playing *anywhere*. Even today, as I come out of my home, when I see the boys in my neighbourhood playing tennis-ball cricket, I join them in the game—you can check on that if you like And I enjoy tennis-ball cricket as much as I do Test Cricket For my principle is the same whether it be tennis-ball cricket or Test Cricket: *Go and have a whack!* Why, I even considered taking part in the Himalayan Rally as a driver. For me, it's the thrill of adventure that matters."

"But, no matter at *which* level you play, this is a game that demands a certain fitness," I said. "Now that you're in films, can you expect to maintain this fitness? Remember, late-night parties are a must on the film beat."

"I like to enjoy my evenings," says Sandeep. "Even on the cricket beat, there *are* parties. And I've invariably stayed late into the night at such parties. After doing that, I've played well enough next day. I want to enjoy life. That's why I plan to give up the idea of Test Cricket after three or four years at the job. For, tell me, which player's stayed at the *absolute* top for longer than that? But why talk of others—for myself, I don't think I can be at my Test peak for more than three-four years more That's if I get back to Test Cricket at all"



PRADEEP CHANDRA

CRICKETERS' WIVES ARE SHOWPIECES TODAY· seen with Prime Minister Indira Gandhi (from left) *are Ramani (Mrs Kapil Dev), Kavita (Mrs Vi.wanath) and Marshneill (Mrs Gavaskar) with their husbands Sandeep Patil here talks of his marriage, movies and Malcolm Marshall*

"You may or may not get back to Test Cricket, but the target now is the World Cup, something for which they are bound to want you back," I said. "Only, the World Cup style of cricket demands, in a sense, even greater physical fitness than Test Cricket Can you hope to maintain *that* level of fitness, now that you've strayed into films where the lifestyle is the reverse of that required for cricket?"

"But what makes you think I'm in films for keeps!" Sandeep comes back. "Do you know that I've had seven to eight offers since I signed on for *Kabhi Ajnabi The*, but I've rejected each one of them. In *Kabhi Ajnabi The*, I play a cricketer—I'm therefore acting Sandeep Patil, no one else. I've just to be myself in the film."

"But if the film succeeds," I said, "do you mean to say you won't be tempted to sign on more movies?"

"Even today, as I come out of my home, when I see the boys in my neighbourhood playing tennis-ball cricket, I join them in the game. And I enjoy tennis-ball cricket as much as I do Test Cricket."

"I can't say what'll happen tomorrow!" said Sandeep. "It's my policy never to think of the morrow, whether it be cricket or films! Whatever the field, I just go out and do my best. All I can, therefore, say is that, as of now, there are no plans to continue in films, otherwise I wouldn't be playing this Ranji Trophy Final just now, would I? As for the lifestyle in films, my lifestyle is what it is—it is never to think of my cricket after the day's play. Similar is my approach to movies. The shooting for my film will be over by September. In between, I've kept myself free for the World Cup—if they want me. As to what'll happen after September, as I told you, I'll be available to play for India again. But, if they don't want me for India, I'll still be available to play for Bombay If they don't want me for Bombay, I'll still be playing for my club! If they don't want me for my club, there's still tennis-ball cricket in my neighbourhood! Please don't get me wrong, but *this* is my outlook on the game—on life. So many people have told me I can achieve so much more if I applied myself to the job. But it's not in my nature to summon *that* kind of application I never *plan* an innings, an innings by me just *happens*. The assault on Dennis Lillee, on Bob Willis, it was never planned, I just went there and played my natural game Sometimes it comes off, if it's my day. Sometimes it doesn't come off, then it's not my day, that's all. So much, for instance, is made of the fact that I failed to hit Imran off his length. But it was Imran's length that was his strength! He wasn't as fast as some others I've played, but he bowled a superb line and length—and that's what proved my undoing."

"Who's the fastest bowler you've faced?"

"It's not Imran, nor Willis, nor Hadlee, it's Jeff Thomson!" said Sandeep. "But, as I told you, sheer speed never did worry me: for, the faster they come, the quicker they go off the bat! The man who's really worried me is Ian Botham. Playing swing is much more difficult than playing speed. I'd therefore any day prefer to face Thomson and Willis than Botham and Lillee! If Imran worried me in Pakistan, it was because he now moved the ball much more than he did when he toured India. Ask a player of even Viswanath's calibre: he'll tell you that swing is any day more difficult to negotiate than speed."

But Viswanath cannot tell us how to negotiate a 'swinger' like Debashree Roy That only Sandeep Patil can do. The first reports of Sandeep's shooting are very favourable· he is supposed to have come off on the screen incredibly handsomely

Handsome Sandeep is in whatever he does. He insists that he is by no means lost to cricket "Cricket is in my blood," he says. "My father was a cricketer, my mother, as a sportswoman, encouraged me no end. You say the two, cricket and films, don't mix I say they do, if only because my approach to *both* is the *same*. But of one thing be certain: that the day I cease to enjoy doing something, I'll give it up."

That is Sandeep all over. He *must* enjoy what he is doing and the onlooker must *equally* enjoy it One theory is that Sandeep drifted into films because he found that, where other Indian Test cricketers had 'glamorous' wives, he was handicapped in this regard.

But all this will remain mere theory in the case of Sandeep Patil. You may be very angry with him for having virtually renounced cricket in favour of films. But the moment you meet him and talk to him, all anger evaporates. You realise that here is a man whose instinct dictates his action.

Sandeep to this day remains the Simple Simon he was when I encountered him in the reserves of the India team. That is to say, there is not a trace of put-on. Humility is his hallmark. And one hopes Sandeep remains that way, whether or not he returns to big cricket. For one can never imagine any actress saying of Sandeep Patil what Suraiya said of Dilip Kumar: that "he continued to act even after the director said 'Cut!'"

Raju Bharatan

In Colourful Jhabua

Where Eloping Is A Way Of Life

Chakresh Jain travels to the interiors of Madhya Pradesh to share the Holi festivities with the Bhils.

LONG ago the Labanas were the rulers of Bhagor village, which produced the most delicious watermelons, greatly favoured by the neighbouring rajas.

One of these rajas once made an unseasonal demand for the mouth-watering fruit. Enraged, the Labana sardar hollowed out the few available melons, stuffed them with earth and sent them to the raja. When they were cut, the raja flew into a rage at the sardar's insolence. His mother calmed him: "Beta, the earth has come to you, do not dishonour her. Get ready at once to attack Bhagor." The The raja assembled his Bhil army and set forth to conquer the Labana village. He was victorious, of course, and in celebration he ordered his men to select a maiden for him from Bhagor.

Bhagoria is derived from *bhagana* which means to run away with or to elope. And even to this day marriage by eloping is common in the Jhabua district of Madhya Pradesh. The Bhagoria *haats* (bazars held a week prior to Holi) serve as a meeting place for young Adivasi boys and girls. It is an eagerly-awaited event for them and many a match is finalised here. When the parents of the boy or girl oppose the marriage for some reason, they meet at the *haat* and spend the entire day singing, dancing, partaking of *paans* and *sherbets,* enjoying a ride on the ferris wheel. Towards dusk they quietly elope to the jungles to start their "live-in" life. Later, a search is made, the bride price fixed by the tribal *Panch* and the marriage performed. But this practice is on the wane now.

I journey to Jhabua to visit the Bhagoria *haats* and to celebrate Holi with the Bhils. This is their most important festival. Eighty-seven per cent of Jhabua's population comprises Bhils, Bhilalas (offspring of an alliance between immigrant Rajputs and Bhils from MP) and Pateliyas, a sub-tribe of Bhils. I am told Valput Bhagoria is most colourful, untouched by civilisation. The area is predominated by Bhilalas. Driving through the hilly region from Alirajpur to Valpur (about 35 km), I am struck at the quiet beauty of the green forests and hills.

Women in gaily-printed *ghaghoras, kanchalis* (blouses) and *odhnis,* rows of bead necklaces hanging from their necks, silver ornaments glistening against their swarthy bodies in the noonday sun, their faces tattooed, present a wonderful sight.

Men in bright shirts and dhoties, *safaas* (turbans) in rainbow hues, wearing *kundals* and *kadas;* young boys with red kerchiefs tied around their necks, silver chains dangling from their ears, sporting pompoms in their ears and shirt collars, are a dazzling sight.

Some are tipsy. It is customary to drink on the journey to the *haat*—men, women, children, all partake of liquor. The Bhils are addicted to liquor distilled from the *mahua* flowers. It is an essential part of their rituals and ceremonies as they believe that the deities are appeased by an offering of this drink.

I spot a group of Adivasis resting under a shady tree after a long journey by foot. I approach them and strike up a conversation. They offer me the *daru*. Rupa informs me that he and his family have been walking for two days from their village to reach the Bhagoria.

I do not see any Adivasis carrying bows and arrows. These are prohibited at the *haats* lest quarrels break out among them under the influence of liquor. A serious problem of the area is the high incidence of crime, particularly around the town of Alirajpur. It is highest after the month of March when *daru* is available in plenty. The quarrels are usually over petty disputes, at times due to superstitions, illiteracy and easy access to bows and arrows.

I approach Valpur. Bullock carts, sleek imported cars and jolting jeeps disgorge their load. Most of them are government officials and some camera toting French tourists. The obscure, sleepy village suddenly comes alive with hectic activity. An incredible kaleidoscopic array of colours, song and dance.

The *haat* fulfils certain social and economic functions. Like most Indian village fairs, it serves as a meeting place where friendships are forged, enmities dissolved. It offers amusement and diversion in the monotonous life of the Adivasis. Here is an occasion to meet relatives, to indulge in gossip to gaze at aliens like myself. In the absence of shops for procurring ones requirements the villagers rely on *haats* for most of their buying and selling.

I weave my way through the bustling *haat.* These open-air bazars have an old-world charm where traders from nearby villages assemble to sell their merchandise. Rows and rows of men and women squat on the ground, their wares spread out in front of them. I wander around losing myself in the melee. I eye the fresh-from-the-fields papayas and assorted vegetables, orange temry fruits. On sale are roasted grams and puffed rice, lumps of jaggery, piles of red chillies which the Adivasis consume in large quantities, baskets, ropes, crude iron implements and what have you. Poultry is also occasionally offered for sale as also livestock.

Side by side ugly plastic toys, chappals and other items shine with a commercial vengence. These glossy, synthetic curios from the city are as much a novelty to them as their handicrafts are to us. A young girl is delighted with her buy of a gaudy plastic bag—a symbol of modernisation.

Several stalls display candy in the shape of large discs in bright red and yellow.

The *sherbet* and *paan* stalls brim with bustling crowds. The Bhils and the Bhilalas eat *paan* by the dozen at the *haats*—this is considered auspicious. Both men and women like to redden their lips with the betel.

Further away are *haldi* powder and *gulal* in heaps. Coconuts are in great demand and everyone buys them, generally as offerings to the deities.

Attired in all their finery, flaunting their lovely handmade accessories, young Adivasi boys and girls strut about, vying with each other to invite attention.

I spot the most beautiful tribal ornaments spread out on a red cloth gleaming in the sun A few yards away is a bangle-seller surrounded by hoardes of women.Business is brisk. I am fascinated by the Bhil bangles fashioned from coconut shells and covered with thin aluminium or silver strips. I too squat among them, waiting for my turn. I am the cynosure of all eyes. The admiration is mutual.

Reluctant to leave, I linger on and make myself comfortable under the bangle-tent watching the enchanting world of the Adivasis pass by

A newly-married couple came here looking for bangles The girl is tall, graceful, fair-complexioned with well-chiselled features I am struck by her beauty She is loaded with silver from top to toe I make enquiries about her with the bangle-seller.

"She is a Bhilala some of the women are extremely good-looking," he informs me "And the weight of her silver is nothing less than 10 to 12 kg"

Another gossip at the *haat* is the tattoo artist The men too have the crescent moon design tattooed on the outer corner of their eyes In olden days, the designs were pricked with babul thorns and coloured with indigenous dyes

I encounter another handsome pair I focus my camera on them but they are swifter than I and instantly melt into the crowd I am told that they are wary I might capture them in my camera and perform some kind of magic on them!

Sartorial fashions are in evidence at the remote Valpur *haat*. A few Bhils have given up their traditional loincloth and jacket in favour of polyester shirts and trousers. The younger ones also sport cheap plastic sunglasses, dingy tennis shoes and carry briefcases. The forces of urbanisation are at work...slowly but inexorably.

The sun shines brightly, the *haat* is at its peak. Sounds of the *nagada* waft across Groups of men and women have assembled under a tall neem tree. The drummer strikes the *nagada*, momentum gathers, feet begin to move unbidden They dance vigorously to the pounding beats of the drum, the jingle of brass bells interspersed with the limpid melody of the flute. Old men with grey beards,women with babes in their arms, some in *ghunghat*, happy children (one of them is perched high on his grandfather's shoulder who sways to the *nagada* beats)—the mass of moving figures sway gracefully around the drummer. More join in, the circle expands Music and dance are the very life breath of the Adivasis—a recreation shared by all

From among the silent spectators emerges the village *sarpanch* clad in spotless white *dhoti-kurta* and *safa*. Tipsy, dancing gently to the rhythmic beats of the drum, he comes towards me and smears my forehead with *gulal*, and vanishes immediately In a while he reappears and again smears me with *gulal*

I look at the revellers dancing non-stop for hours at a stretch, as if in a trance Sitting on the parapet, the minutes seem timeless, and the hours speed by. The *haat* soon comes to a close towards the end of the day. Gradually a silent calm descends. The Adivasis are homeward bound—along roads, along jungle paths. The sights, smells and vibrant colours of the spectacle linger on.

At the fixed *muhurat*—9 pm—the *tadvi* or village headman arrives. He performs puja in front of the pole and makes an offering of cooked rice and coconut to Holi Mata. Others too make similar offerings I too follow suit and squat beside them.

The *puja* over, the *tadvi* lights the bonfire. The assembled crowd bows down in reverence to Holika with folded hands. There is an unprecedented joy as the flames leap up. Pindrop silence prevails for a while.

A few steps away from the bonfire the drummer strikes his *dhol* A small group of men, women and children form a circle and start dancing and singing *Holi* songs in monotonous strains, in their untrained, rustic voices. Some men dance in a frenzy with bows and arrows in their hands—a truly memorable sight At their request, I too join them. Incongruous though, sari-clad as I am

The *Holika* is never left alone, the singing, dancing and drinking continues throughout the night Next morning water is poured over the smouldering fire The festivities continue for five days after *Holi* But the Bhils do not play *Holi* by splashing coloured water on each other. This custom is prevalent only among the non-Adivasis

Sensitive, lively, a vibrant colourful people, the Bhils live in an isolated world of their own. And in their own way, have nurtured and preserved their distinctive tradition and culture, inextricably woven into the rich tapestry of life in Madhya Pradesh. ■

The Punjab Tangle

Hindus Hold The Key

P.K. Nijhawan, looking at the Punjab problem from a fresh angle, says that, if the Akali position today looks desperate, it is the Akalis themselves who are to blame for it.

THE apparent failure of the long and protracted Akali-Centre talks, the resignation of the Akali legislators from the Punjab Assembly as well as Parliament, the near unanimity in Punjab today about the economic and even the political demands of the Akalis (barring, of course, the Anandpur Sahib Resolution); the Union Government's decision to involve the States of Haryana, Rajasthan and Himachal Pradesh in resolving the whole question which is seen by many as putting a premium on an indirect veto; the Akali decision to exercise the collective social pressure of the community on the non-Akali Sikhs holding various elective positions—all these factors go to indicate how very complicated the Punjab tangle today is. The men of goodwill (including well-placed politicians, ex-Generals and journalists) are sounding warning after warning that, in order to serve Punjab and thereby India, no party or individual should stand on mere prestige. But no one exactly knows where the solution lies and what it would achieve even if the main political and economic demands of the Akalis were conceded!

The atmosphere is such that each move, howsoever well-meaning, generates distrust. For example, when the Prime Minister unilaterally announced before a huge Sikh congregation in the Gurdwara Bangla Sahib in New Delhi the acceptance of some of the religious demands of the Sikhs, it was described as a calculated move to drive a wedge between the so-called moderate and extremist Akali factions A clean-shaven senior Sikh Civilian, who apparently has nothing to do with the Akali politics, described it as wrong tactics His point was that, even when you are seeking a solution to a labour dispute, it is wise to reinforce the credibility of the labour leaders.

What he meant was that the Government's effort to weaken the Akali leadership would not be conducive to producing the desired results. And lo and behold, only the following day, Sant Longowal, dictator of the Akali agitation, termed the Prime Minister's pronouncement as a fraud on the Sikhs.

Another view was that the unilateral announcement by the Prime Minister was calculated to strengthen the non-Akali Sikh leadership to resist the Akali demands. It came only some days before the Akalis were to wait in deputation upon President Giani Zail Singh. But, if the non-Akali Sikhs are as numerous as 40 per cent of the Sikh population (a figure seldom contested), then how is it that the Akali Dal invariably emerges as the sole champion of the Sikhs and yet Congress Sikhs continue to rule the State?

A discerning Sikh scholar, a thorough pagan at heart, observed that no Congress Sikh ever wants that the Akalis should lick the dust! His thesis is that, through this bipolar leadership, the Sikh community has got what it would never have got—the best of both worlds! According to this theory, the Congress Sikhs themselves want the Akalis should continue to agitate and escalate their demands so that the Hindus in Punjab continue to look to the farmers for production and succour. Be that as it may, the Akali leadership views with concern the ability and the tactics of Indira Gandhi to diffuse the situation by prolonging the talks, trying all the time to look as reasonable as possible but, in fact, letting all kinds of issues be raised. Chandigarh and the River Waters question are even now as complicated as they ever were, if not really more complicated, particularly after all the views have been voiced. The Haryana Chief Minister is back at the starting-point, demanding a division of Chandigarh in the ratio of 60:40 between Punjab and Haryana. The local Hindu population (including all the Hindu employees of the Punjab Government) unreservedly declare that 80 per cent of the Chandigarh population is Hindi-speaking! Everyone knows that this is a white lie. But, then, the Punjab problem is a compound of such lies The type of political arrangement under which Chandigarh is ruled by the Centre makes it an ideal city for blackmailing by every trick in the book.

However, now the Akali position looks really desperate. For this, the Akalis are themselves to blame. When, in 1966, the demand of Punjabi Suba was conceded, no Akali leader worth the name bothered about how the boundaries of the new State were to be fixed. It was left almost entirely to the Union Home Ministry to decide this most vital issue. At that time, the victorious Sant Fateh Singh could have really got a much better deal for Punjab had he thought of visiting Delhi. But, then, victory was too heady a wine to think of anything else. At that time, it was enough that the Sikhs formed 62 per cent of the population of the new State and that the Akalis could hope to rule there indefinitely. At last, the long-cherished dream of the Sikhs to have a State of their own, after the eclipse of Maharaja Ranjit Singh's kingdom, had been realised!

But it was not to be. Indeed, except for two brief periods when the Jana Sangh and the Akalis got together (first under Justice Gurnam Singh and later on in the Janata Government), they have not been able to see eye to eye with each other. And their failure has been the Congress's opportunity. Thus Akali frustrations have been mounting, so much so that now they are thinking of asking for a "nationhood" for the Sikhs or special rights for the Sikhs in Punjab.

The Akali dilemma, it must be said in fairness, is compounded by the fact that, in the State of Punjab, the Sikhs are fast losing their majority. From the overall figure of 62 per cent in 1966, the Sikh population has declined already to 52 per cent—a very nebulous situation indeed! It is not the Congress that has beaten them at the hustings; nor has the wily Hindu played foul. The truth is that the Sikhs themselves have been turning their back on Punjab.

How? The Sikhs have an all-India—nay, an all-world—view. They are ever in search of greener pastures and, therefore, are ready to migrate or emigrate (as the case may be) at the first opportunity, whether to other parts of India or to the vast world outside. Those who go away send a lot of money back home, which gives Punjab the appearance of an exceedingly rich State. It often causes indolence, if not also drug addiction. The vacuum in the labour force thus caused is filled by the cheap seasonal labour from Eastern UP and Bihar. Many of these workers stay on in Punjab. Besides many Sikhs, who got disgusted by the two spells of Akali rule, have migrated from Punjab for political reasons and those who were left behind have been voting against the Akalis. In fact, the Akalis can never hope to come to power in the given circumstances through elections.

Then what is the strength of the Akalis? During the past two years, their agitation has progressively been gaining momentum and their demands have escalated. The reason is that the Akalis have, over the past 60 years, developed a very special technique of keeping the community in a state of perpetual unrest. Whether the issues are imaginary or real, they so pose the challenge that, to the common Sikh, the Panth appears to be always in danger. The success or the failure of the movement is commensurate with the challenge and how it is concretised. The greater the perception of challenge, the greater are the sacrifices the people are prepared to make in the cause of the Panth. This theocratic approach to issues has a built-in mechanism for exciting the Sikh masses to great acts of heroism and martyrdom.

The present agitation has some very complex causes. A common Punjabi, whether a Sikh or a Hindu, does feel economically deprived as a Punjabi even though he is the most affluent citizen of India. The River

Waters issue is quite a real issue over which the Punjab peasant feels greatly concerned and agitated. Then there is the issue of Chandigarh. A common Sikh in Punjab does feel that the Prime Minister's arbitration award over the issue of Chandigarh was motivated. That a common Hindu does not feel so is, to him, a grave provocation. That the Hindus in Punjab are not Punjabi chauvinists is another factor which makes him feel insecure culturally, economically and politically. When the Hindu still records his mother tongue as Hindi and 45 per cent of the people living in Amritsar are said to be Hindi-speaking, what would happen if the present Hindu minority turns into a majority? Would the Sikhs then become second-rate citizens in their own home? If this were to happen, why was the bigger East Punjab vivisected in the first place?

A common Sikh does not bear religious or political persecution. But, culturally, he is mighty afraid. He does not want to lose his identity in the oceanic Hinduism!

It is this instinct for cultural survival, above everything else, which gives strength to the present Punjab agitation. The issues of Khalistan and the Anandpur Sahib Resolution gain significance from this basic fugitiveness. A senior Punjabi writer told me that, during the last five years or so, the question of identity has become very acute. He explained: "Before, there used to be only one *Shivala* (Shiva's temple) or gurdwara in the village and it served both the communities equally well. But, now, almost every village has a *Shivala* and a gurdwara; and they seem to be vying with each other as respective religious symbols of two exclusive communities."

"The crux of the Khalistan problem," a very senior Jat Sikh litterateur says, "is that the Sikhs know the futility of this demand. But, supposing somehow... the issue is internationalised, then Khalistan would be a reality sooner or later.

Well, the extremists in the movement seem to be working just for that. Murders, bomb attacks, hijackings, desecration of religious symbols—all fall in line once this is understood. The Hindu retaliation, in whatever form, just amounts to playing into their hands!"

What is the solution? Apparently, there does not appear to be any. The Government perhaps hopes that some day, sooner or later, a bloody showdown would take place between the extremists and moderate Sikhs. But it is a cynical approach. Punjab is a sensitive border State. Nothing should be done to undermine the patriotism of the Sikh community and its devotion to Mother India.

Then how to break the present impasse? My recent trip to the North has more than confirmed me in the view that the solution to the Punjab problem lies neither with the Akalis nor with the Central Government but with the Punjabi Hindus. There are already some signs—very feeble as yet—that the Punjabi Hindu has started thinking in terms of being a Punjabi first and last. Perhaps the example of Telugu Desam has shaken him out of his slumber. But the Punjabi Hindu has yet to assert his Punjabi identity in full measure. If he finds his roots again in Punjab and himself owns the cultural, linguistic and territorial heritage of Punjab, the Sikh fears can be allayed in no time.

No one is perhaps more conscious than I am that strong vested interests among the Punjabi Hindus would try to thwart such a movement. But it is time the Punjabi Hindu came out of his shell to save Sikhism, Punjab and even India.

Has the Punjabi Hindu become culturally anchorless? No, I do not believe that anything of the kind has happened. But it is true that, by denying Punjabi and owning up Hindi, he has lost his natural medium of expression. He is mute, no doubt, but extremely restless within, more so due to his sense of loss of history. If you ask a Punjabi Hindu to name a hero he (the Punjabi Hindu) has produced, the man he may name is Porus who fought Alexander the Great—some 2,200 years ago. In the centuries since, whoever attained fame in Punjab does not belong to him! Not a single saint, not a single poet, not even a great martyr, not one man of destiny did the Punjabi Hindus wedded to Hindi produce! "We're no more than an abstraction named *Namasteji*!" said a psychologist who was a good student of Sanskrit in his day.

In sum, the Punjabi Hindu today feels physically uprooted, culturally and emotionally voiceless and historically bankrupt. But, surely, all is not lost; he can still redeem himself, as he has before.

There are three Kshatriya movements in India's history. They embodied a revolt against a very complex dehumanising ritual, they signified the rise of the spirit of man after his crucifixion, so to say. These movements are: Buddhism, Jainism and Sikhism.

Now it is the Punjabi Kshatriyas who gave rise to Sikhism as the finest expression of their own spiritual yearnings. Whereas Buddhism and Jainism constituted a revolt against Brahmanism in search of a simple but profound way of restoring man to his spiritual destiny, Sikhism was the response of a virile but spiritual community to two opposing challenges with no possible meeting point between them. It had not only to free the spirit of man from the Brahmanical tyranny of the lifeless ritual and superstition but had also to steel it against the overpowering onslaught of Islam. And it was wholly a Punjabi resurgence of faith—a total resurgence of the spirit of the Punjabi Hindu.

Naturally, therefore, this religion of Nanak, one of the greatest redeemers of mankind, spread in no time to NWFP, Sind and all the four corners of Punjab. Guru Nanak's poetry is so exalted and his metaphor is so new that he comes close to the singers of Rig Ved. His message rejected the strait-jacket of both Sanskrit and Arabic and used only Punjabi as the vehicle. That the Punjabi *Monas* (those who shave their hair) are not Sikhs is, therefore, a wrong interpretation of history!

Even when the 10th Guru gave birth to the Khalsa, it was not at all the birth of a new community or a faith. Certainly those who chose to enter the new order—the Guru himself called it the "Khalsa Panth"—had to go through a simple baptismal. But so what? My old Sikh (Khalsa) uncle, who was quite a Hindu in that he saw to it that he completed the pilgrimage of all the four *Dhams* of the Hindus before his death, told me once: "All that Guruji did was that he made the brave among the Sikhs into professed revolutionaries, which means that they now had to die for the defence of *Dharma*—the Hindu *Dharma*—in any onslaught on it."

It was like the Rajputs in their desperate last struggle donning saffron robes in a do-or-die resolve. And the Guru gave the Sikhs the protection of *Bhawani* Herself—the Goddess Durga: the name given to the sword.

One can understand what kind of psychological advantage it must have given to the Khalsa in the battlefield! Guruji's call for the defence of *Dharma* was such that each Mona Sikh family for generations would baptise the first-born into the Khalsa.

I also discussed the question of the Devanagari and Gurmukhi scripts with a Professor of Linguistics. He said that both these scripts—as most other Indian scripts—developed from a common source: the Brahmi script. Now, supposing the Devanagari script is better, why can't the Hindus establish its superiority by bringing out books, magazines and newspapers in Punjabi but in the Devanagari script? The irony of the situation is that the entire Hindi-Punjabi controversy has been raging in Urdu!

The mass of the Punjabi Hindus now know all this to their own cost. They are prepared to make amends. "We want to save Punjab at all costs," a young graduate told me in Chandigarh and asked: "What would happen if all the Hindus say they are Sikhs?

I said: "To be a Sikh (Khalsa) is a very hard drill."

He said: "So what? Shall I thereby remain a Hindu?"

The answer is certainly in the affirmative. All Hindus are Sikhs to the same extent as all Sikhs are Hindus.

It is good that a man like Dr Karan Singh was in Amritsar the other day. He can certainly do much to heal the wounds. Punjabi Hindus need a strong new leader who must emerge from within them and make a bid to resolve this tangle on a cultural and religious basis. And this leader should *not* be a politician.

Is there such a hope? Yes, when such a ferment obtains among the mass of the people, a leader is not long in coming. ■

And the
two monarchs
will owe
their throne
to the Sikhs.

Progress is prosperity And prosperity means happiness

Punjab Anand Batteries ltd

More smiles to a smiling land.

Punjab Anand Batteries manufacture India's largest selling metal jacket batteries and India's first Silver Oxide button cells.

But we like to think of ourselves as more than just that.

For in providing packaged power, our industrial and technological activity generates employment to millions of people—workers, dealers and distributors.

Letting happiness and prosperity walk into their hearths and homes.
Our partnership in the country's progress.

Afghan Refugees:

They Wait With God

Anees Jung, who visited an Afghan refugee camp, discovered that the atmosphere there is quietly charged with the presence of God; the men who bear their wounds and privations silently are "icons of determination and self-confidence".

"It is cold. The sun has gone down. The mullahs have gone in and their pupils with them. The lustre has gone from the blue towers and the green corn. Their shadows have gone. The magic scent has gone, and the twilight brings back the spring, cold and uncertain. Goodbye Herat..."

—Robert Byron

NO soaring minarets. No shining domes. No arched *mihrabs*. Just the sound of the *azan*, at dawn and at dusk—loud, resonant, steadfast. It rises out of a low concrete building that now serves as a mosque in Kacha Garhi, one of the 250 camps that house 2.2 million Afghan refugees in Pakistan's North-West Frontier. All along the dusty road to Khyber are sprawled miles of desolate habitations — tentage villages, clusters of mud huts; in each a rope bed, a blanket, some utensils, a lonely goat, some chickens, bare essentials to sustain life. And yet, even in such a wilderness, signs of normal human activity — shops of meat and vegetables, small provision stores, a barber at work with a wobbly table, a chair and a broken mirror, a vendor with a tired pile of oranges and pink sweetmeats—proclaim the fragile presence of man's heroic efforts to provide himself with things that give him a sense of physical togetherness. Visiting the camp I get a strong feeling that there is a level beyond the physical which is integral to the life of this refugee community. Yes all has been lost here except God, the one single force that keeps the uprooted spirit from disintegrating.

Each camp has a central mosque, usually a nondescript building with walls of mud or brick. Inside, on frayed cotton carpets, crowd men at prayer with a fervour that is undiminished. And in the benign precincts of the mosque that casts no shadows, there is often a school under the open sky and sun, vibrant with wide-eyed children squatting on the ground with tattered books and slates lined in front of them. In the school yard stand two black boards on which are written lines in Urdu. One reads: *Hum musalman hein, hum patange hein Islam ki rah mein.* The other: *Chuna na ab phut jayenge, Bulbule chote badey.* Violence is like bubbles. It will disappear explains the Urdu teacher, a Pakistani. Except for those who teach Urdu, every other teacher is an Afghan. Usually bearded, turbaned, dressed in dirty white stands one, rugged in looks, gentle in demeanour. He teaches the children to sing Islami *taranas*, recite verses from the Quran and quietly tells them that they are little men who will grow up to be big soldiers, to carry on the *jehad*, the crusade against the *kafirs*. "Why have you come here a boy of seven?" Someone once asked in a camp. "We have come to escape from *kufr* and we have taken *hijra*, the little boy said. "When your identity, your values, your moral being, your vision of life is in danger, a Muslim is compelled to leave, to take *hijra*. It becomes his moral compulsion," explains the bearded scribe. "When the Prophet found it difficult to preserve the basic independence of the Muslim community, he left Mecca."

This is no ordinary camp, I tell myself. Though scenes of human deprivation abound, the atmosphere is quietly charged with a presence, no less than that of God. There are chantings, *naras*, a spiritual resurgence, spontaneous, unhindered. The philosophy of the ritual, I am told, is to inculcate a special aura in the environmental distress that the children find themselves in, help keep them in the mainstream and see that their psychological links with their land and their faith are not weakened. "Refugee camps do not generally make a good scenario," says Abdullah the highly articulate, fiercely committed Commissioner in charge of the Afghan Refugee operations. "Here you see men carrying on without even talking about their misery or displaying their wounds. They are icons of determination and self-confidence. They are men of honour involved in a very difficult mental exercise — to balance their misery with their honour."

Letter From Calcutta

Wind Of Change

THE story used to be told that the British engineers who built the white marble edifice of the Victoria Memorial were at their wits' end as how to instal the 16-ft bronze figure of Victory above the dome. The angel weighed more than three tonnes and had to be perched at a height of 184 ft. So the experts decided to mull things over during a leisurely lunch at the Bengal Club or, perhaps, it was Firpo's, when they tottered out after claret, port and coffee, it was to find that the workmen had done their job for them. Blowing her trumpet, clasping a laurel wreath, the winged angel stood against the skies.

It is a pity those workmen are not still around, for they might have solved a problem that so baffles the Memorial's secretary and curator that he recently inserted an anguished announcement in all Calcutta dailies Set on ball bearings in a bowl of mercury, the figure used to turn with the wind; it suddenly stopped doing so in 1978 when, it was discovered that mercury and grease had both disappeared. Queen Victoria would not have been amused. But anyone who can make Victory revolve again is promised a reward of Rs 10,000.

Whatever ingenious idea is now tried out, the angel really stopped turning because the wind in West Bengal blows in only one direction. It would be best really to wait until the State's next elections when Victory might change direction of her own volition.

Birds Of A Feather

WILDLIFE enthusiasts were not the only people to be relieved when the zoo recently announced that life had returned to normal. Despondent beyond belief in December and January when only a sad trickle of the customary annual flight of birds from Siberia, the Caspian Sea region and the Himalayan foothills arrived in our city, spirits soared in the zoological gardens in February and March when at least 10,000 migratory birds swarmed belatedly into the lake there. The news brought cheer to all those who have reason to fear that Calcutta is nowadays inhabited only by folks who have nowhere else to go. Derelict and declining this city might be, but it has not yet been forsaken by our feathered friends from abroad.

On The Road

THOUGH Mr Rabin Mukherjee, the Transport Minister, assures us that Calcutta commuters pay only 40 paise for the first 10 kilometres of bus travel against 70 and 75 paise respectively in Madras and Bombay, the month of March was disturbed by a series of fierce protests against the fare increase. Roads were blocked, buses burned, an irate Mr Jyoti Basu rudely barred from entering Writers' Building and a particularly rowdy member of the Assembly suspended.

Mr Mukherjee pleads that the higher charge is inevitable: fuel costs 152 per cent more, spares and tyre prices have gone up by 78 per cent and wages by 85 per cent, while revenues have increased by only 60 per cent. This may sound plausible enough. But even if it is accepted that it takes no less than 14,226 men to keep 700 buses on the road every day (as the Minister claims, though there seems to be far fewer vehicles) it is incredible that the State Transport Corporation should pay Rs 2.18 crores in incentives and another Rs 70.22 lakhs for overtime in addition to an already inflated salary bill.

Little wonder that mini buses, those daredevil pirates of the highway, are clamouring to raise the minimum fare from 65 paise to Rs 1.30. Taxis will follow suit, and no one can blame Mr Ghani Khan Chowdhury if he decides to cancel his magnanimous 25 per cent cut in the increased cost of second class railway commuter tickets.

Spare The Rod

WHO ever said that corporal punishment is officially frowned on in this country though it is the norm in Pakistan and may become so in General Ershad's Bangladesh? Two learned judges of Calcutta High Court, Mr P.C. Borooah and Mr Ashamukul Pal, have decided in their wisdom that the police have no business beating up undertrial prisoners since the mere fact of being arrested and charged does not deny them of their constitutional rights Which would seem to indicate that the law will not bat an eyelid if prisoners who have been tried and convicted are thrashed within an inch of their lives.

The justices meant well of course, and it might be unfair to pick holes in their statements. But comes a point when stating the obvious seems almost to condone aberrations. Such rulings are, in any case, utterly futile The Bench might as well decree that women should not be raped, banks should not be looted and Harijans should not be tortured. The need is for firm deterrent punishment rather than pious homilies.

Struggle For Power

HAVING questioned one piece of the judiciary's handiwork, I must hasten to make amends by complimenting another. However important or sensational they might be, newspaper exposures do not usually persuade the authorities, grown callous over the years, to bestir themselves. Not so, however, with a series of complaints against the Calcutta Electric Supply Corporation published in the *Telegraph* under the heading "What is the CESC up to?"

After hearing a petition challenging the right to subject people to long hours without electricity, Mr Justice B.C. Basak, also of the Calcutta High Court, ordered the CESC to inquire into charges and submit answers. And for good measure, he invited other consumers—domestic as well as industrial—to approach the court with their own complaints.

Unfortunately, the judiciary cannot generate power. But investigations by it, strictures and orders might yet induce criminally negligent officialdom to make some effort to discharge its responsibilities. As has been said many times before, the courts remain the last and only protector of public rights in India—for those who can afford them.

Wise Owls

ALL Indians are of an inquiring bent—Shaw and Evelyn Waugh had something to say, albeit not very flattering, on the number of letters they received from the sub-continent—but Bengalis are, perhaps, among the most persevering in their quest for often quite useless knowledge. The latest edition of *Fodor's Guide* makes an oblique reference to the trait when it talks of the heady intoxication of heated conversation over cups of tea in Calcutta's eating houses.

The Oxford Word and Language Service, appropriately enough OWLS for short, will cater to that taste. Run by 30 members of the Oxford University Press, OWLS promises anyone who invests in an Oxford dictionary, authoritative answers to questions on all aspects of the origin, meaning and use of English words. There are bound to be many takers among young and old, hungry to widen the dimensions of their learning.

Dhobi's Itch

TIME was when a Bengali who had the misfortune of inviting society's ire was deprived of the services of the washerman and barber. The ban might not make much difference to today's upper echelons whose drip-dry clothes are no longer sent to the *bhatti* while hair stylists long ago took over from barbers. But the middle class cannot do without the *dhobi*, and the West Bengal Sabha Sunder Samiti is up in arms over the latter's neglected plight.

Problems have arisen not only because water has suddenly become such a precious

A nutritionally complete feed should contain all the nutrients in the right proportion...

Cerelac provides a nutritionally complete feed –in one delicious form.

When your baby is about four months and ready for solids, consult your doctor about Cerelac. You'll find it reassuring to know that every Cerelac feed you give your baby is nutritionally complete.

Which means every Cerelac feed has all the necessary nutrients, proteins and calories he should get from a single solid feed. You do not have to supplement it nutritionally.

Cerelac owes this nutritional completeness—and taste—to its delicious blend of wheat flour, full cream milk and sugar. Cerelac provides proteins for body building, carbohydrates and fats for energy and all the essential vitamins and minerals for all round development.

Give your baby Cerelac—for his full, healthy growth.

Cerelac is so easy to make. Just add it to pre-boiled, warm water. Mix, stir and serve.

Cerelac®

Already contains milk

Page 28 Continued

I see the truth of his statement as I go around the camp and talk to some of the young men who have stayed back. Most of them are away on the front fighting. The camp population consists of 48 per cent children, 28 per cent women and 24 per cent males, most of them aged and infirm. In a tea shop in Peshawar's Kissakhani bazar, I find a young man on crutches with a round green brocade cap sitting squarely on his head. He is a refugee from Kabul, I am told. His one leg was blown off when a bomb burst over his field, shattering his limbs. The boy talks little, as if he has been stunned into silence. Are you afraid to talk I ask him. Why should I be afraid of you if I was not afraid of guns and tanks, he mutters, lapsing back into silence. He is one of five brothers. Two of them work in the tea shop while two stay and fight with the Mujahedeens. They take turns to work and fight. This is the general pattern in most families where there are young men, I am told.

They have not come here to find jobs, make money or settle down. Those who work—in bazars selling blankets or rugs, working in shops or driving trucks—do so only to keep the families sustained while they equip themselves to fight. "They are self-respecting people," says the Commissioner. "If anyone suggests that they be given job opportunities and helped in settling down they resent it. We can't stop them from coming or from going. The moment the conditions are right they will go back."

Does he see that moment in the forseeable future? "The refugees seem to be very confident that they will go back to their country. What they base their hopes on they only know. Perhaps their spirit, their efforts, their truthfulness, their cause, their history. I have met thousands of refugees, individually, collectively. I have yet to meet one who nurses despondency or who is not hopeful. Despite differences among themselves (they come from different regions, speak different languages), they voice one sentiment. Every single Afghan is a Muslim. Our rationale has been that we are a country of Muslims. If any Muslim anywhere feels a threat to his identity, he is welcome here."

According to Abdullah, who speaks more as an ideologue than a civil servant, this is a very special identity. It is not an identity in terms of economic freedom, nor an identity of the house you occupy or the land you till and live on. "Our identity transcends all this. It is an identity based on one's relationship with God, what you owe to him and what he has ordained you to do. When that basic contract is not respected everything is irrelevant. This sentiment has been the life force in the making of this country. In Urdu there are two definitions for the word refugee — *pannahguzeen* are those who seek shelter and *mojahirs* are those who take *hijra*. Afghans are *mojahirs*. They have come to a Muslim country with their aged, their women, their children, fleeing from extreme distress and brutalisation. They are our guests whether they come in hundreds or millions, whether they stay for two years or twenty years. Our people have welcomed them, deeming it their moral duty. Moreover they share the same ethnic roots, the same language and culture, the same faith. The line that divides our frontiers is only a political boundary. It has no relevance to our social and ethnic realities. The people's response has been an inspiration to the government, strengthened our hands in handling a very sensitive and volatile problem, its ideological content being the primal force...

"We are receiving the refugees as they come. The sites of the camps are selected by the refugees themselves. Wherever they found some land and water they settled down. The organisation came much later. We are following the logic of events. We are not authors of that logic. We did not construct camps and reception centres as was done some ten years ago in another part of the same subcontinent. We have not contributed to the phenomenon. We are only the recipients. Our hope is that the interest of people in Afghanistan is kept alive and that there is no fatigue in compassion. The wait perhaps will be long but it is heroic, the stuff that creates history. And the Afghan has decided to make history." ■

Page 29 Continued

commodity here but also because of the new-fangled notions of organisations like the Calcutta Metropolitan Development Authority and the Calcutta Improvement Trust which are trying to change the way of life. They have not only forbidden washermen access to the usual lakes and tanks which used to abound with *dhobi ghats*, but also not provided them with alternative sources of water.

The Samiti wants the injustice remedied at once. It is also demanding family quarters for 1,700 washermen in the Tiljala suburb, extension of the Minimum Wages Act to cover 55,000 laundry workers and security of contract and fixed wages for the *dhobi* round the corner who washes, starches and irons your shirt and brings it back the next day.

Heart Of The Matter

HIGH-POWERED executives who boast of their cardiac ailments as evidence of the stress and strain of having constantly to take crucial business decisions will not thank Dr Manash Bhuniya, a Congress (I) MLA, for lumping them with the common herd. For Dr Bhuniya blames the recent spurt of heart problems on something as mundane as the rice and mustard oil supplied by ration shops.

In its early days rationing was blamed for a number of illnesses including beri-beri and potential third generation blindness. Now Dr Bhuniya cites a survey carried out by Professor C.C. Kar, head of the Cardiology department at the SSKM Hospital, to claim that poor storage of rice and mustard oil breeds a fungus which, when consumed, forms uricic acid leading to cardiac blockage. What he overlooks is that the high and low must be separated even in matters of disease. After all, only the poor steal. The rich suffer from kleptomania.

Clio Restored

THERE must have been something wrong after all with the Left Front Government's Class VIII history syllabus. When the West Bengal Headmasters' Association first protested that prescribed books played down the Freedom Movement and national leaders to exalt the Soviet and Chinese revolutions and their heroes, it was said to be Congress (I) propaganda. The CPI (M) was cock-a-hoop when Mr Justice Monoj Kumar Mukherjee dismissed the association's petition under Article 226.

But two other judges, Mr M.M. Dutt and Mr C.K. Banerjee, have now upheld the headmasters' appeal, struck down the new course, and decreed that the earlier syllabus should be restored. They have also ruled against the Education Board's circular allowing books that are not prescribed, and which was said to permit committed teachers to preach their own ideology.

Welcome though the decisions may be these swings only underline the true dilemma of education in West Bengal. It is not so much a question of what kind of history should be taught as to whether history—or any other subject for that matter—can at all be taught by the crowded confusion of our schools.

Area Of Darkness

WHEN illness forced Mr Jyoti Basu to leave his paternal house and take refuge in Raj Bhavan, where a lift that is never disrupted by power cuts spares him the effort of climbing stairs, his former neighbours in Hindustan Park apparently promised bodily to carry the Chief Minister up and down as many times a day as he liked, if only he would return to their midst. Let it not be supposed that this touching offer was inspired by affection for Mr Basu or fervour for his politics: it is just that his abode in the area spared it the gruelling power cuts that inflict such agony on the rest of the city. An embarrassed CESC, perhaps acting under orders from above, quickly saw to it that even though the Chief Minister had abandoned Hindustan Park, the neighbourhood's relative immunity to the laws of load-shedding was quickly restored.

Sumita Sandilya

In The States

Varsity In The Red

BOMBAY: A fee hike (amount yet undefined) in post-graduate studies in the Bombay University is imminent in view of the financial crisis that the University is facing this year, according to its Vice Chancellor, Prof Ram Joshi. The prestigious 125-year-old University, comprising 32 depts and 136 affiliated colleges is saddled with a staggering deficit of Rs 45.8 lakhs, of which Rs 28.8 lakhs is on the recurring amount and Rs 17 lakhs on the non-recurring account. Furthermore the University's budget estimates for 1983-84 reveal that the cash balance in the general fund is Rs 58 lakhs which is a meagre 7.6 per cent of the annual outlay of Rs 759 lakhs.

According to Mr S.V. Ghatalia, a member of the Senate who has been in charge of the University budget for several years, the general fund is a significant index of resources available for financing and coping with the day-to-day operations of the university and as such there *has* to be some co-relation between the proposed cash outlay and the cash balance in the general fund. Instead, the ratio of this balance to the total expenditure has declined from 20 per cent to 8 per cent in the last ten years, despite a 58.1 per cent increase in the number of affiliated colleges, a 45.5 per cent increase in the number of University departments and a 203.3 per cent increase in the number of students of the University depts during the same period.

Moreover the higher education depts also show huge deficits. For example, the J. Bajaj Institute of Management (there are only 5 such institutes in India) has a deficit of Rs 10 lakh, the Computer Science dept—Rs 10 lakhs. The reasons for this depressing state of affairs are not hard to find. Though the Vice Chancellor is not unduly pessimistic, both he and Prof Ghatalia admit that the situation could become serious. Both also concur that the University resource structure is extremely inelastic.

There is an extreme paucity of government grants which do not and never have taken into account the rising costs (due to inflation), over the years, of equipment and materials—the prices of books, stationery, chemicals, etc, have risen threefold over the last 6-7 years. The situation is unusually grave this year due to the introduction by the state government of the salary payment scheme in 1981-82 to replace the earlier 9 assorted grants given to the University.

Though under this scheme the State government undertakes the entire responsibility with respect to salary, of teaching and non-teaching staff *approved* by government, its salary expenditure is to the extent of Rs 35.5 lakhs, while it has discontinued several items of grants to the tune of Rs 51 lakhs, thereby necessitating a further Rs 15 lakh loss for the University. Prof Ram Joshi reiterates that this scheme has definitely accentuated the University's financial problems due to certain inherent and glaring shortcomings:

1. The scheme provides for "approved" staff only and so as per the Bombay University Act, persons appointed after 11.8.1978 will have to be the sole responsibility of the University. It is illogical to ignore the teaching and non-teaching staff that the University may have recruited since 1978. The rub is mainly felt for the clerical staff—on an average 400-500 recruits are taken in each year, according to Mr N.N. Naik, a member of the University Senate.

2. The team salary excludes gratuity, and abolishes the depreciation grant—the latter being an absolute "must" for the adequate maintenance of the University. Upholding of traditions apart, the older the building, naturally the larger the cost of its upkeep.

3. The scheme further excludes the salaries of six so-called self-supporting schemes—University hostels, University press, Computer Centres, Dept of Computer Science, Directorate of Correspondence Courses and J.B. Institute of Management Studies. Five of these 6 units, however, show deficits, according to Mr Ghatalia. Prof Joshi also wonders how a students' hostel, which is basically an amenity, can be termed a self-supporting scheme.

Furthermore, since the Bombay University has steadfastly refused to rely on overdrafts, the only options left to it, with respect to this year's crisis are to a) curtail expenditure as far as possible—this would mean the discontinuation of certain new projects which were earlier funded till the plan stage by the UGC and later relegated to the State government, but which now lie in the University's domain—unless additional compensatory grants are given, says Mr Naik, and b) to generate resources through fee hikes (the last one was as far back as in 1964), or to request the State government for additional untied grants, more in the nature of an endowment.

A suggestion made by Prof Ghatalia to introduce an income-index based fee schedule so that wealthier students pay higher fees was shrugged aside by the Vice Chancellor who feels that differential fees cannot be charged for the same education. He cited the similar experiment carried out by Poona University some time ago which failed.

The Vice Chancellor in turn suggested the following measures to earn additional revenue:

1. Commercialisation of the University printing press, and Computer Centre, on an administrative and salary scale comparable to the market outside.

2. Formation of a State University development finance corporation which could subsist on contributions from colleges, universities, State govts, etc, from which needy institutions could draw finances at lower rates of interest.

3. A five-yearly review of the free structure (both under-graduate and post-graduate), to fix fee rates which are more realistic in terms of unit cost of higher education. For instance, why should science and art students pay the same fees, if their cost of equipment, material, etc, varies?

4. Encouraging of private munificence and private donations *a la* those given to foreign universities which thus render private donors eligible for certain tax exemptions. Such trusts could form a "cushion" for the University's needs.

5. Better use of investible funds which should be allowed to be transferred from the government's low interest bearing securities to fixed deposits in banks or even to high interest paying public sector enterprises.

These are all valid and beneficial proposals that should be considered, but their acceptance or outcome will obviously take an appreciable amount of time.

The immediate course before the Bombay University is admittedly to press the State Government into revising some of the objectionable clauses of the salary payment scheme, and to allocate additional grants to meet the burgeoning demands of a premier university, which, in the words of Prof Naik is being meted "step-motherly treatment".

In fact, Prof Ghatalia is quite justified in saying that since education is basic to the progress of the economy, there can be no talk of productivity or technical skills, if low priority is given to it.

Prof Ram Joshi has since resigned as Vice Chancellor to take up visiting professorships at the University of Texas, Austin and the University of Pennsylvania. His resignation comes into effect from June 1, 1983. At the time of going to press he was not available for comment.

Minnie Vaid

Bunglings At Coal-Fields

HAZARIBAGH: With a view to ensure development, the Central Government nationalised the coal industry assuming full right, title and interest. Seven hundred and eleven coal mines were taken over under the Coal Mines (Nationalisation) Act 1973, while 464 more mines were acquired under the Coal Mines (Taking Over of Management) Act 1973, to prevent the ruthless exploitation and destruction of the coal wealth of the country by vested interests which were minting money at the nation's cost.

However, with loot and bungling by the coal-fields' managements becoming the order of the day, the workers' lot was hardly ameliorated. Now with unexpected radical changes brought about at the top echelons of Coal India Limited, workers, staff and officers are hoping for an improvement in the financial and personnel managements of Central Coalfields Limited, a subsidiary of Coal India Limited controlling the coal mines of this region.

The CCL authorities are claiming a "pure profit" of Rs 121.49 crores during 1981-82 and are boasting of a record production of 25.56 m tonnes of raw coal and 3.40 m tonnes of washed coal (from April 1982 to January 1983) as against 23.82 m tonnes and 3.33 m tonnes in the previous year, showing an increase in production by 7.3 per cent and 1.8 per cent respectively. However, according to a highly reliable source, the production figures are inflated and allegedly manipulated with the connivance of General Managers and Project Officers of different areas.

The false propaganda apparently is a ploy to gain cheap popularity and hide the loot and bunglings prevalent in the coal industry. On 27th August, Parliament was rocked with the alleged report of pilferage of three lakh tonnes of coal worth Rs six crores from Kedla Open Cast 4 TB Quarry in Hazaribagh Area, subsequently an announcement was made on the floor of the House that experts would verify the coal stock of Kedla mine. No action at all has as yet been taken against the authorities involved in this major bungling.

Likewise, the vigilance cell of the CCL itself nearly a year ago detected a bungling of Rs 3.50 lakhs in the handling of stack coal at its Giddi Washery in Hazaribagh district. According to the report, stack coal from the washery site is shifted to the washery dump site with the help of CCL pay loaders but the Superintending Engineer allegedly passed a bogus bill of Rs 3.50 lakhs submitted by a coal transport contractor for the alleged rehandling of stack coal from the site to the washery dump. However, following the expose, the matter is being hushed up—the lower staff is being victimised even when involvement of senior officers is apparent.

It is alleged that the management of CCL itself has created "Mafia" gangs which are vigorously operating in most of the collieries. Black Diamond Carriers and Red Ball Carriers, two leading transport agencies, were started two years back with an advance of Rs 3⅓ crores without any security merely to provide jobs for the ex-servicemen from Punjab. This has caused great resentment among the 300 drivers and cleaners who had no work but were still drawing wages to the tune of Rs 4 lakhs every month.

A year ago the tribal and rural populations revolted in unison against the allegedly oppressive measures adopted by the CCL management to acquire a large portion of their ancestral lands without compensation or employment.

The Topa mine disaster on July 16, 1982 in which 16 mine workers, including one mining Sardar, were killed has exposed the CCL propaganda that safety measures are being implemented. Although the Mines Safety Inspectors Office is located at Naisarai, 10 kms from Topa underground mines, no staff ever visit the mines.

The "Mafia" gangs have virtually taken control of coal sale and contract works, this has caused a spurt in inflated and bogus bills. Thousands of trucks pass daily from these areas and these gangs realise Rs 150 to 200 from each truck owner as "Babugiri" tax—shared with CCL officers.

A £ 60 million (Rs 100 crore) deal of purchase of junk machinery from the United Kingdom for Amroli project in Singharauli area in the recent past by the then acting Chairman of CIL has demoralised our talented engineers who are competent enough to manufacture the same here. This purchase was made, the rumour goes, only for the sake of the huge commission money

Rajendra Pratap Rana

DMK–Cong-I Honeymoon Over

PONDICHERRY: When the DMK party, a consistent proponent of the Congress-I Government at the Centre, walked out of the Lok Sabha on March 17, the first signs of a split in the Congress-I—DMK ministry of Pondicherry, became all too evident. Though the walkout was staged to protest against the Speaker's ruling, which refused to allow any discussion on the acute water scarcity in Tamil Nadu, the act strengthened the impression that the rift among the ruling partners of this Union territory is total.

For some time, the ruling partners—the DMK and the Congress-I—have been crossing swords on various issues. The latest issue to spark off the split is the decision of the Congress-I to go ahead with departmental or penal action against government employees who participated in the all-India strike on January 19, 1982. So far, 10 government employees have been convicted with a month's simple imprisonment, besides a fine of Rs 150 each. Another 300 employees have had to suffer break of service. Reacting strongly to this victimisation, the DMK president Mr M. Karunanidhi has warned that his party would be constrained to reconsider its alliance.

Writing in a recent issue of 'Murasoli', the official party organ of DMK, Karunanidhi blamed the Congress-I for the split in the ruling front. He recalled that the Congress-I has been repeatedly saying that it will go it alone in future elections, delinking itself from the DMK. Ridiculing the statement of TNCC-president Margatham Chandrasekhar, who attributed her party's defeat to the DMK in the recent Tiruchendur bye-election, the DMK president said that his Party, which polled 30,000 votes, suffered because of the Congress-I's presence in the contest. In fact, Karunanidhi has publicly criticised the Congress-I for not supporting his Party in the Periakulam and Tiruchendur bye-elections. With such hard feelings, the split in the Union territory's ruling front has not come as a surprise.

On the advice of the Party president, the Pondicherry unit of DMK wrote a letter to the PCC-I president P. Shanmugham MP, wherein the DMK Party requested that Congress-I legislators pass a resolution opposing the anti-labour and anti-government employees measures. As expected, the Congress-I decided to ignore the letter.

Pondicherry is plagued with several problems on various fronts. Power failures have become the order of the day, vexed with frequent breakdowns, many business establishments have installed generators. The transport industry, totally owned by private operators, is having a field day. Recently, the government allowed the transport operators to increase fares; the move brought forth a strong public protest backed by all six opposition parties.

Given the deep seated suspicions and rift among the ruling front partners, the budget session of the assembly is poised to throw up quite a few challenges to the survival of the ruling coalition in this Union territory.

G. S. Reddy

The States Do Have A Case

G.S. Reddy says that the recent conference of Southern Chief Ministers at Bangalore has served its purpose in that it stirred the conscience of New Delhi into announcing the setting up of a commission to review Centre-State relations.

IF the *entente cordiale*, so splendidly demonstrated by the Southern Ramas at Bangalore on March 20, 1982, does not fizzle out in course of time, the day will go down in history as the day that ushered in genuine federalism in India.

This, of course, is not the first time that an attempt was made at restructuring Centre-State relations. Owing to some historic compulsions, India has almost become a unitary state, in spite of the pious declarations on federalism

An opportunity to strengthen the federal structure was provided on a platter in 1967 when the Congress lost power in Uttar Pradesh, Bihar, West Bengal, Orissa, Punjab, Rajasthan and Kerala But the Governments in these States were so preoccupied with their struggle for survival that they hardly had time to take a fresh look at the Centre-State ties.

Another chance was lost in 1977, when the Janata Government dethroned the Congress (I) at the Centre. But, again, the Janata Government, like its predecessor, expressed its reluctance to concede regional demands. In fact, Morarji Desai flatly refused to discuss the question of granting more powers to the States.

The conference of the Southern Chief Ministers at Bangalore recently succeeded in stirring the conscience of the Central Government. Hardly three days after this meet, the Prime Minister announced that the Centre will set up a commission to review Centre-State relations. In a way, this move by the Centre has nullified the demand of the Southern Chief Ministers, who have made a strong plea for the appointment of a Fiscal Commission: with adequate representation for the States and statutory powers to review Centre-State fiscal relations. The participating Chief Ministers felt that the commission should recommend amendments to the Constitution and enactments for a more equitable distribution of resources between the Centre and the States.

Basically, the Bangalore meet was held to evolve a common approach to the Eighth Finance Commission, which will be visiting the Southern States soon The Ruling Ramas have made many promises to the people and are not unaware of the fact that their power will be ensured only if they are as good as their word. But this will be possible only when these States are in a strong financial position. They feel that the existing dispensation has placed funds at the disposal of the Centre and the functions with the States. So the Southern Chief Ministers, barring Kerala, had no choice but to impress upon the Centre the need for a review of the present fiscal relations.

The Bangalore conference demanded transfer of resources to the States more on a statutory than on a discretionary basis. The demand reflects the widespread assumption that grants under Article 272 are politically determined. The conference called for an objective appraisal of the needs of the States, according to criteria to be evolved by the Council of Chief Ministers. (The Council of Chief Ministers of Southern States is intended to be converted into a Council of all the Chief Ministers.)

The Chief Ministers of Andhra, Karnataka, Tamil Nadu and Pondicherry have also stressed the need for modifying the Gadgil Formula for the distribution of Plan Assistance by the Centre to the States. According to this Formula: *(1)* The needs of Assam, Jammu & Kashmir and Nagaland are to be met through *ad-hoc* assignment out of the total Central assistance; *(2)* the balance is to be distributed among the other States as follows: *(a)* 60 per cent on the basis of population, *(b)* 10 per cent on the basis of per-capita income only to those States whose per-capita income is below the national average (the lower the per-capita income the higher the allocation); *(c)* 10 per cent on the basis of per-capita tax effort in relation to per-capita income; *(d)* 10 per cent on account of continuing major irrigation and power schemes; and *(e)* 10 per cent on consideration of special problems of States (chronically drought-affected areas, desert areas, tribal areas). As the per-capita income has a significant bearing on the Central Plan assistance, the Bangalore meet pleaded for a five-year average while calculating the per-capita income.

While allocating resources, the Centre metes out preferential treatment to the less-developed areas in the country. This is in consonance with the objectives of the National Development Council (NDC), constituted in August 1952. One of the objectives of the NDC was to recommend measures for achieving the aims and the targets set out in the National Plan, including measures to secure the active participation and cooperation of the people, and ensure the full development of the less-advanced regions.

In a way, this objective of the NDC, though a laudable one, puts a premium on backwardness: a rapid note of economic progress deprives the progressive States of their due share. The Bangalore conference, pointing to this paradox, said that the formula should be evolved in such a way that the resources' transfer should not only help the backward States but also provide adequate resources to the more developed States, if only to sustain their growth.

About the revised overdraft regulations, the Chief Ministers felt that the new rules perpetuated injustice in respect of States which had managed their finances satisfactorily earlier. To meet the increased credit requirements, they suggested that the limits on ways-and-means advances to all States might be raised by 50 per cent over the quantum fixed for States in July 1982. Further, they added that those States which had an overdraft on June 30, 1982, might be afforded term loans, as was done for the States which had overdrafts on March 31, 1982.

The States, however, are perhaps protesting too much. Under the Constitution, they have the power to levy many more taxes than the Centre. They complain that they are saddled with inelastic sources of income and that the money-spinners—like income tax, corporation tax, excise duty and customs—are controlled by the Centre. But they have, by and large, absymally failed to exploit their own tax potential. In fact, there is much greater scope for increasing the revenue from irrigation and power tariffs but, in order to curry favour with the rural voter, they deliberately turn a blind eye to it.

At the moment, the gripes of some of the Southern States—M.G. Ramachandran of Tamil Nadu, for instance, was reportedly a reluctant participant at the Bangalore meet—are mainly directed at the dominance of the Planning Commission. And, ostensibly, they have a case of sorts. The Chairman of the Fourth Finance Commission had spared no words in taking the Planning Commission to task. In a supplementary note to the Finance Commission's Report,he said·

There is no provision in the Constitution for a body like the Planning Commission. It was established by a resolution of the Government of India. Neither the strength of the Commission nor the qualifications of its members was prescribed. The Government retained complete freedom to vary its strength at will and to appoint anyone as a member. There was no limit to the duration

of the Commission when it was constituted, possibly it was meant to be a temporary body and, in a sense, it continues to be so, though obviously it has come to stay The composition of the Commission is unusual It has as its Chairman the Prime Minister, and, among its members, there are Cabine' Ministers When compared to a statutory body like the Finance Commission, which is quite independent of the Government, the Planning Commission may be described as a quasi political body There has been, from time to time, variation in the strength of the Commission and in the appointment of its members Though its role is advisory, it has come to occupy a very significant and important place in the economic development of the country and vis-a-vis the Government, it is not easy to describe its status In spite of its importance, it remains, to this day, a body without any constitutional or legislative sanction

Be that as it may, at the suggestion of the Planning Commission, the National Development Council was set up in 1952 Following the recommendations of the Administrative Reforms Commission the Government reconstituted the NDC to include as members Union Cabinet Ministers (in addition to the Prime Minister), Chief Ministers of the States and members of the Planning Commission Karnataka Chief Minister Ramakrishna Hegde feels that the NDC is predominantly a Central forum where States do not get adequate opportunities to put forth their views

Now, with the entire South (barring Kerala) going out of the Congress (I) fold, a review of Centre-State relations has become imperative The ground for the Bangalore meet was prepared by the Karnataka Chief Minister when he visited Andhra Pradesh in February N T Rama Rao okayed the idea immediately The Tamil Nadu Chief Minister, M G Ramachandran, though not very keen in the beginning, joined the fraternity in a show of solidarity Not to be left out of the Club of Ramas, the Pondicherry Chief Minister, D Ramachandran of the DMK, also fell in line K Karunakaran of Kerala, apparently on instructions from fear-struck Delhi, decided to stay away from the historic event

Even before the meet, however, the Southern Chief Ministers made it clear that the Bangalore forum will ultimately strengthen the federal structure of the country There is no reason why anyone should doubt the intentions of the non Congress (I) Chief Ministers With the changing political complexion, an event of this nature is a natural fallout Even New Delhi cannot deny the fact that it took the States for granted all these years In fact, Mrs Gandhi implicitly acknowledged as much when she announced the institution of the Sarkaria Commission to review the Centre-State ties

Though the terms of the Sarkaria Commission had to be finalised at the time of writing, it will serve its purpose only when it takes a realistic view of the existing political realities There are several powers vested with the Centre as of now which defeat the very concept of federalism In view of the past experience, the Constitution should be suitably amended At present, Parliament can legislate on any matter in the State List, if authorised by a two thirds majority of the Rajya Sabha The Constitution also provides for President's Rule in a State and this power is said to have been misused several times

Again, there are emergency powers which have been invoked when there was no emergency in the true sense of the word.

While the Sarkaria Commission is expected to take a comprehensive look at the entire gamut of Centre State relations, it should also heed the views expressed at the Southern Council of Chief Ministers They have triggered off fresh thinking among other States also The Jammu and Kashmir Chief Minister Farooq Abdullah, is keen on holding a similar conference of Northern States as soon as possible Maybe Jyoti Basu, a vociferous proponent of State autonomy, is also thinking on similar lines

If these councils materialise, then the All India Council of Chief Ministers, as envisaged by the Southern Chief Ministers, will soon become a reality ■

The First Bharat Darshan: In Paint

Sarosh Demavent on the Daniells

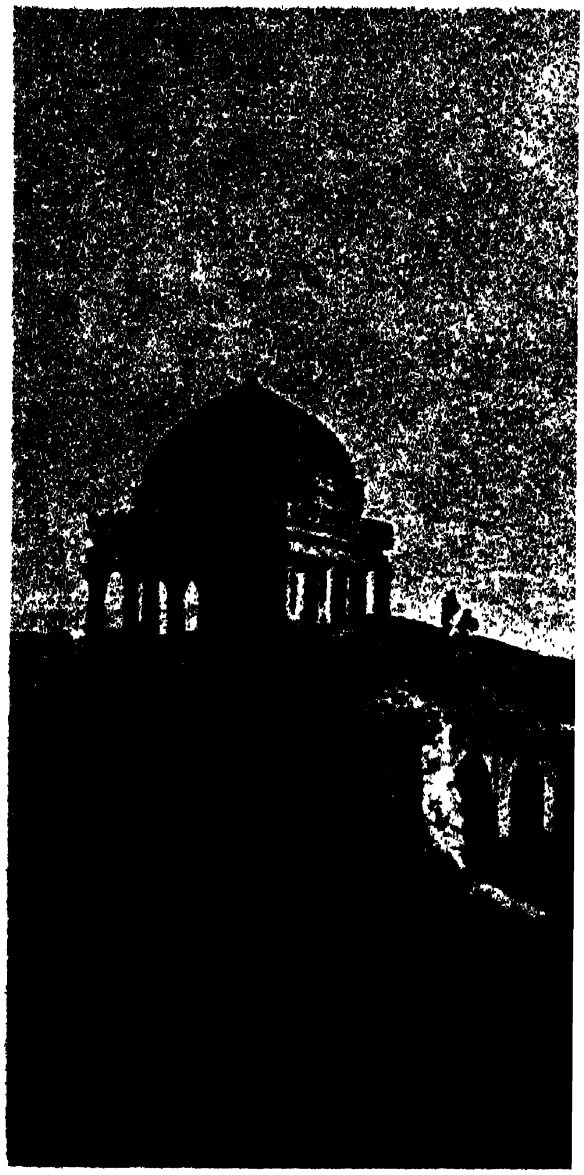
IT was the British who first painted our landscape. Indian painting is notably deficient in representation of architecture and nature and, in consequence, there had been virtually no visual record of the country till the late 18th century.

Landscape painters were not doing particularly well in Britain at the time. For most of the 18th century it was to Europe that most patrons turned when they desired a landscape: the picturesque scenes of Poussin, Lorraine, Panninni and Canaletto were the high watermark of contemporary English taste.

So the British painters came to India. It was not an easy passage by any means. A painter who wished to go to India had to first submit an application to the directors of the Company, backed by acceptable securities in England. The permission granted, the painter then had to secure a passage on one of the infrequent East Indiamen and priority was naturally given to the Company employees. But the lure of a fortune to be made in the land of the Great Moghul was not inconsiderable. Hodges in 1780 was the first landscape painter to travel to India and for the next fifty years several dozen came here; but the Daniells were undoubtedly the most successful. Perhaps the most energetic, too.

Thomas Daniell and his nephew William spent seven years in India, from 1786 to 1793, they invested their stay with an effort that was unparalleled. On their arrival at Calcutta in 1786, the two immediately began work, making sketches of the city. Two years later they had published their *Views of Calcutta*, as a series of twelve views of Calcutta, priced at twelve gold mohars a set. The aquatints were the first published views of the principal public buildings of Calcutta. They were an instant success and, with the money they received, the Daniells began their first Grand Tour of the interior.

The two left Kidderpore on 29 August 1788. They took a boat up the Ganga. They reached Rajmahal on October 9, Bhagalpur on October 18, Ghazipur on November 25 and Benares by early December. Allahabad, Kanpur, Fatehgarh, Agra. They spent three days there, marvelling at the Taj. Sikandra,



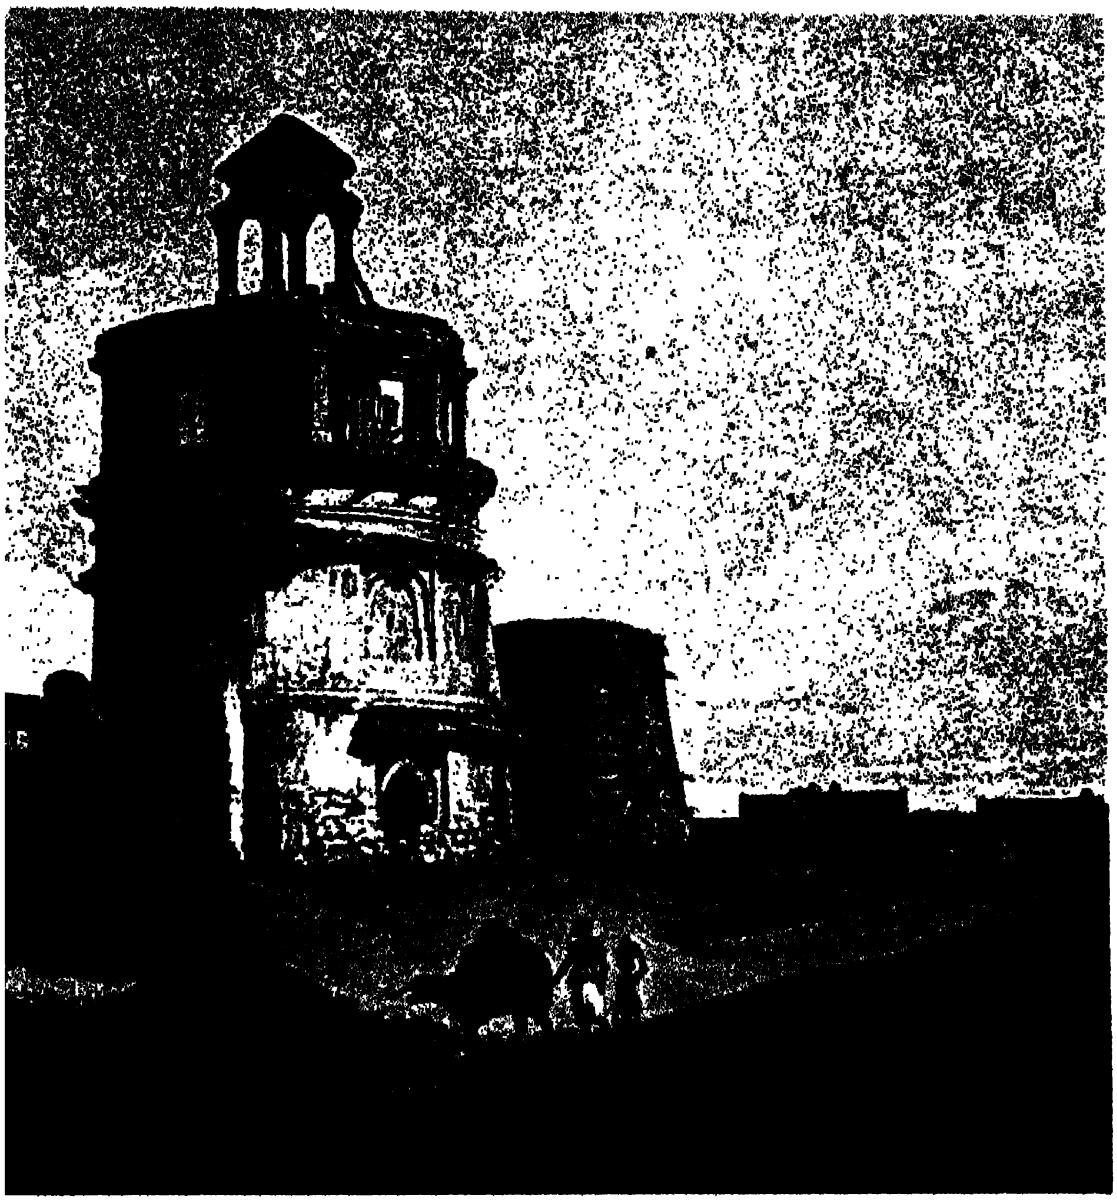
View on the Chitpore Road, Calcutta.

Fatehpur Sikri, Mathura, Delhi. On March 6, they left Delhi for the North, Hardwar, Anupshahr. They waited around for permission to visit the Gharwal Himalayas and finally obtained it.

On April 22, 1789 they entered the Gharwal Himalayas, the first Europeans ever to do so.

They returned to Calcutta in 1791, three years after they had set out from the city that had enabled them to make the journey. Rampur, Lucknow, Allahabad, Benares, Bhagalpur (they spent an year here), Jaunpur, Rohtasgarh, Gaya; down-stream they spent more time at each place, as ever recording a wealth of visual impressions in their sketches.

In March 1792, the uncle and nephew team sailed for Madras. With an entourage of 47 people (11 bearers each for two palanquins, a syce each for their two horses, four drivers for a bullock cart, etc) they left Madras on April 9. They sketched briefly at Kanchipuram, Arcot and Vellore and moved on to Bangalore. In and around the Baramahal Hills: Sankaridrug, Rayaakottai, Verapadrug. The artists then moved to Trichinopoly, where they drew the famous rock fort which by now had become a symbol of British military power in India, after Clive's victory over the French here in 1752.



Remains of an Ancient Building near Firoz Shah's Cotilla, Delhi.

The temples of Madurai fascinated the Daniells, as did the palace built there by Tirumala Nayak. But it was the waterfall at Papanasam that really caught their imagination—altogether they produced fifteen versions of it. "Nothing" they wrote, "can be more grand and impressive than when, on first throwing open the gate, this extraordinary scene burst upon the sight."

From Papanasam to Kanyakumari. Here too they made history for before them no foreign traveller had visited both the Himalayas and Kanyakumari. Then Mahabalipuram, Tanjore and finally, Madras. In Madras the two made several sketches of the town and its monuments and along with these sketches sold a number of oil paintings of the South.

They were now at the end of their journey. In February 1793 they left Madras for Bombay in a country boat. In March they reached Bombay. Here they made several sketches of the cave temples at Salsette and Elephanta. After one false start, they finally left Bombay for Canton late that year.

In 1795 they produced the first series of their aquatints entitled *'Oriental Scenery: Twenty Four Views in Hindustan.'* The success of this enterprise was followed up by five other series, making a total of 144 aquatints. The first series included the first ever views of Delhi made by any artist. (Their print of the Qutub Minar is doubly precious: not only is it the first view of the Minar made by any artist, it is also the only original print to show the Qutub in its entirety: in 1803 an earthquake destroyed the topmost portion.) The complete set sold for £210, a fortune at the time.

Interest in the Daniells' work is rapidly increasing. In 1979 their oil paintings were listed and reproduced by Maurice Shellim in *'India and the Daniells'* and in 1980 their aquatints were catalogued and reproduced by Mildred Archer in *'Early Views of India'*. Jagmohan Mahajan's *'Picturesque India'* is an important addition to the field valuable chiefly for its 81 colour plates of the Daniells' oils and aquatints and for its relaxed text, which relates the circumstances and conditions of this interesting Bharat Darshan.

Rs 500 Crores Go Up In Smoke Every Year

Aruna Sood outlines the measures that need urgently to be taken to fight off recurring fire hazards

COME summer and hundreds of thatched huts are destroyed by accidental fires every year Fanned by strong winds, even a spark can play havoc in villages where people can hardly afford tin and asbestos sheets for roofing The losses caused by such blazes run into staggering amounts year after year It has been estimated that dam ages due to fire in India would be over Rs 100 crore a year but, when indirect losses are added, the total would come to Rs 500 crore a year—a hefty amount by any standard

What are the causes that account for such a colossal but avoidable loss in men and materials? The reason is not far to seek Thanks to the advancement of civilisation and the resultant industrialisation, the use of electricity has become indispensable Today, the demand has far outstripped supply But the increased use of electricity has not proved to to be an unmixed blessing Like the proverbial curate's egg it is good in parts only The biggest and the most dangerous inbuilt hazard is the fire due to a short circuit or leakage

Imagine those living in *kutcha* or makeshift huts with a lot of inflammable material lying near by or stored in and around their dwellings—hay for the cattle, firewood and dried cow-dung cakes for cooking purposes A small electric fault could let loose hell for their lives and limbs

The fire hazard is not confined to rural areas, it is equally devastating and even more acute in urban areas and large metro politan cities like Bombay, Calcutta, Madras and Delhi Dotted with multi-storeyed build-ings, skyscrapers and large hotels, fire hazard is the common denominator

Take the case of Delhi where, during the last five years, there have been about six serious fires Of these, the fire that raged in the high-rise Hindustan Times House for two hours, a few years ago, left behind the entire eighth floor gutted and its facade smoke-smeared But this tragedy pales into insignifi-cance when compared with the Bangalore fire in which scores of people were roasted alive while enjoying a circus show two years back

Recently, a major fire broke out in the Universal Insurance Building in South Bom-bay Not only were five storeys completely gutted, the whole area at the junction of Sir Phirozshah Mehta Road-Cowasji Patel Street was engulfed in black smoke, as the strong winds fanned the flames on the ground floor

However, it is the modern industries which have to face considerable fire hazards at various stages of production The overall fire risk will depend on the size of the industry and the processes in which it is engaged

Fire statistics show that a great majority of fires in such industries are of electrical origin Electricity in large quantity is extensively used in all the sections of such industries The main power station, sub-stations, trans-formers (generally oil-cooled), generators and large sized cables running over long distances through pits, tunnels, galleries basements, etc, present considerable risks But the main causes of fire are overloading of circuits, overheating of electrical motors or switchgear, physical damage to temporary wiring and flexible connectors, old and faulty wiring, and the use of wrong-size fuses These causes are in turn, the result of defective installations, poor maintenance, an uneducated staff and neglect by the man agement in carrying out proper checks periodically Any breakdown in the system gives us a clear warning that something is wrong with the installation But, instead of proper investigation and permanent remedial action generally, only imakeshift arrange-ments are made

Besides, in the case of fast-moving machines, there is always a danger of fires caused by frictional heat This is due to insufficient lubrication, faulty bearings, mechanical overloading, wrong alignment and the like So are welding and cutting operations a major cause of fires in such industries On many occasions, such opera-tions are carried out in various locations all over the industry by contractors At times, it is done close to combustible materials like sawdust, wood-shavings and shingles, which are very easily ignitable by sparks emanating from such machinery Even a carelessly discarded burning cigarette-stub can start a small smouldering fire which may remain unnoticed for a long period but could sud-denly flare up

Mercifully, things are a far cry since the →

days when London was ravaged by a fiery deluge called "The Great Fire", which began in a small house on September 2, 1669, and kept smouldering for as many as three days, consuming myriads of houses, hospitals and churches, including the famous St Paul's Church. In the far past, Oslo had also been razed (in 1491) and, still earlier, the German city of Dresden had suffered a similar fate (in 1419). That a modern fire can do immense damage to a large section of its citizens—and that, too, in a matter of minutes—has been made amply clear in a recent movie *The Towering Inferno.*

However, one can take comfort in the thought that greater risks have brought out greater ingenuity and inventiveness in man. In pursuance of this, modern buildings are being designed with an eye to their utility and ability to prevent the risk of sudden outbreak of fires, while the use of fire-retardant coatings and paints, as well as equipment such as automatic sprinklers and portable fire-extinguishers, are an integral part of such plans. Some buildings are now provided with a hydrant system running along all floors to help fire-fighting. Besides, it is now possible for the firemen to reach the highest building in a few minutes with the help of snorkels. In Sears Towers, Chicago, the firemen reached the 110th floor in less than two minutes.

At the same time, fire-resistant fabrics have been invented which are highly insulated and resistant in melting. One such fabric is the Zirpo-treated wool that gives better protection against convective heat from flames and a longer warming time between the onset of pain and the receipt of a second-degree burn or blister, thus allowing the wearer to move away from the heat source before serious burns could occur.

A demonstration of this took place recently in Dusseldorf in Germany. Flame from a burner was directed onto a wool-glove made of the same fabric as the sleeve. It took many minutes before the wearer of the glove began to feel any heat: although the fabric eventually got charred and smouldered, it refused to support the flame. Further, the wool-protective clothing cools off more quickly after exposure to flames than similar garments made of most other fibres. This is all the more important because enough heat can be transferred to the skin to cause a second-degree burn even after the wearer of protective clothing moves away from the flame or the heat source.

Meanwhile, the greatest need of the hour is to train and educate the public on its specific role in the entire scheme of things and to create an awareness among them for mitigating, if not eliminating, the fire hazards. But, more than anything else, there is the importance of making the worker fire-conscious. Without this, even the best fire-protection measures will be incomplete and ineffective. Good housekeeping, closing-time checks and fire-watching can go a long way in minimising the losses and making our industries safer. These important safety measures are generally neglected and need our immediate attention.

The choice of April 14 in India as Fire Services Day is one such effort towards this coveted end. More important, the Day is associated with that fateful day in 1944 when an explosion on a ship, berthed in Bombay Port, led to a fire which spread with lightning speed to the neighbouring docks and warehouses and then fanned out to vast residential areas near by, killing nearly 1,000 persons and injuring many more, before it could be brought under control. But the real significance of the day lies in its personnel, who dedicate themselves anew to their very exacting tasks; and the public, remembering their debt to that daredevil brand of men, cooperate in all such measures which aim at preventing, or at least in curbing, the accidental fires.

Ironically enough, many people are still blissfully unaware, nay ignorant, of the fact that the fire services provided by the civic authorities are there not merely to put out the fires but also to advise on preventive measures. All that one has to do is to visit the nearest fire station and approach the fire-brigade representative for that purpose. ■

A Company Called Shakespeareana

Among the numerous theatre groups that our generation has known in India, many will long remember a company called Shakespeareana. Started by an Englishman called Geoffrey Kendal, and his wife Laura Lidell, Shakespeareana brought together a talented team of actors who toured all over India for 17 years, performing wherever they were asked to. Asha Suri provides some interesting glimpses of their years in India.

JOHN DAY AND JENNIFER KENDAL in The Tempest.

...All the world's a stage,
And all the men and women merely players;
They have their exits and their entrances;
Any one man in his time plays many parts...

THE living theatre provides entertainment for royalty and *hoi polloi* alike, and India has always had her fair share of thespian talent. Like ephemeral comets, they soar to a few moments of glory, and then fade away to nothingness. The era of motion pictures and television has brought the stage to the very homes of the audience, but nothing can quite replace the glamour and glitter of a live show on the stage.

Among the numerous theatre groups that our generation has known in India, many will long remember a company called Shakespeareana. In its heydey in the fifties and early sixties, this troupe performed all over India with a repertoire that ranged from a macabre *Macbeth* to a side-splitting *She Stoops to Conquer*. Thousands of children have sat shocked by Shylock's avarice, moved by the poignancy of Portia's "quality of mercy", and rocked to laughter by the antics of Charley's aunt.

The progenitor of Shakespeareana is an Englishman called Geoffrey Kendal. Being hopeless (as he now claims) at everything else, he graduated from an office boy and engineering apprentice, via the amateur theatre, to the lowest rung of the British theatre as an assistant stage manager in a provincial company. He was, at this time, 19 years old, and had finally found his true metier. Any forays into the field of engineering were totally forgotten.

This led to bit parts with a number of repertory companies, including a tour of *Dracula* when it was running at three theatres consecutively. He was barely 21 when he got his first taste of Shakespeare, in a touring company playing not only Shakespeare but other old English plays as well. It was in this company that he met his future wife, Laura Liddell, a person who had been particularly good at dance and elocution even as a schoolgirl in the Lake District. They were doing well, and with a little experience were promoted to playing juvenile leads such as Romeo and Juliet.

Unfortunately, the years of depression not only hit the industrial life of Britain; many of the arts suffered a setback as well. The company Geoffrey was with had to wind up. Geoffrey, whose real surname was Bragg, changed it to Kendal, taking the name of the little English town from where he came; quite undaunted, he and his wife Laura went ahead and started their own company.

They restricted their performances to the British Isles. It was at this time that their daughter Jennifer was born—"between the matinee and evening performance"—no doubt holding a portfolio of Shakespeare in one hand and a volume of Shaw or Sheridan in the other! Jennifer thrived backstage, nourished on the smell of greasepaint, and could quote reams of Shakespeare when other children could barely spell their name. Her daily contact with the works of famous English playwrights more than made up for a lack of any formal education.

However, the war years spared nobody, and Geoffrey Kendal soon found himself a sailor on the high seas, doing his bit for his country. A twist of fate enabled him to join ENSA, and both husband and wife visited India. For them it was the turning point in their lives. Their visit to India seemed to have been a spiritual homecoming, and they found themselves mentally attuned to the warm and receptive audiences of India.

It was therefore only natural that the moment the War was over they should make a beeline for India—this time having formed a company called Shakespeareana, the founder members being the three members of the Kendal family, along with Peter Meriton, Eileen Garner and Geoffrey Unsworth. The pre-Independence years were spent mostly in touring the Princely States and giving many private performances. The group stayed together for a year and then returned to the UK, enriched by their experience in India.

Geoffrey Kendal was offered a managership with a new touring company, but unfortunately it did not materialise. However, the Kendals had sufficient experience and confidence to take on this venture themselves, again under the auspices of Shakespeareana. Once more they gave themselves a year's experience in the UK, and then a venture abroad as far as Malta, hoping to

make it a stepping stone to India.

The company roll-call now included John Day, Brian Kellet, Wendy Beavis, Conor Farrington and Peter Bromilow. Many must recall the tall and lanky John Day. He joined Shakespeareana as a stripling of 17 and was to remain with them for nine years.

Conor Farrington had plunged, almost literally, into the activities of this group; they were at that time calling themselves the International Theatre Group and were playing a season in a temporarily converted swimming pool complete with tiles and a 6-ft deep end! Geoffrey Kendal did not even audition the enterprising young Irishman who, in addition to his good looks and histrionic talents, had a bit of spare cash he was willing to invest in the company.

Brian Kellet, who first joined the company in 1952, had had a little theatrical experience already, with his first speaking role in *She Stoops to Conquer* with Paul Scofield; he was to be quite an asset to the company, not only in the roles of Major Petkoff, Mr Hardcastle, Mr Spettigue, but in many ways off-stage as well.

Geoffrey Kendal was at this time trying to raise money in order to tour India once again. In 1952, they got as far as Malta where they did a season—a series of 16 plays in four weeks—quite successfully, considering the scanty rehearsal. But the attempt to reach India proved abortive, and it was only two years later, by dint of performing in the Midlands, that enough money was finally raised for nine of them to once again set out for India, from Tilbury, abroad the *Jaljawahar*.

UTPAL DUTT AND LAURA LIDELL in Hamlet.

But this was no mere pleasure cruise. The passengers were entertained to *Arms and the Man* on the poop deck in the middle of the Red Sea, and *Macbeth* in the first class lounge when they reached the Indian Ocean, managing to bring down not the house but many of the light fixtures with their sword play!

Arrival at Bombay was dramatic. Not only were they held up for hours at customs, convincing them that the arms they carried were mere props, but they discovered to their horror that the total money they had between them was the princely sum of £14. Fortunately, their frantic contacts with the schools in Bombay brought an immediate and enthusiastic response, and within an hour they were fully booked, mostly for performances of Shakespeare's plays.

The impact of India on the travelling players was an experience in itself for many of them. To them, Bombay wasn't inhabited—it was infested. Bombay's honeycomb of overcrowded, shabby buildings was overwhelming, as was the heat, the dirt, the humidity and the poverty. But the players coped with it all with remarkable adaptability. The success of their performances with the school audiences made them realise something that Geoffrey Kendal had himself already learnt from previous experience; that here was a land where the people formed a lovely contrast to the blasé audiences of London. The group in turn recall witnessing a performance of Othello in Marathi in a suburban Bombay theatre whose cheerfully noisy ambience was remarkably reminiscent of the Globe Theatre of Elizabethan England.

Then followed their tours across the length and breadth of India, covering thousands of miles and performances as they criss-crossed from east to west, north to south, wherever a booking beckoned. Geoffrey Kendal and Laura Liddell played the lead roles, while the secondary roles fell to Jennifer, who initially used the family name Bragg, and only later switched to Kendal. To add to the fun, her little sister Felicity was only eight years old at the time, and the entourage included her ayah, and two bearers, including the faithful Mangat Ram who, in addition to his duties of packing and hustling coolies, had many walk-on parts.

They were a self-sufficient group and were their own stage-hands, carpenters, set-designers and costumers. Every ounce of time and talent was fully utilised. Laura Liddell herself, with Brian Kellet, painted many of the backdrops, and on one occasion they even roped in their local tailor to play a similar role in *The Taming of the Shrew*, but

the poor fellow's nerve failed him completely when the time came! They used the most economical materials possible, and were delighted with the craftsmanship in India. In fact, to this day, the Kendals find India the best place to come to order costumes to their specifications.

It was only natural that a company that toured so long in India should absorb local talent. Long before Shashi Kapoor made his debut with Shakespeareana, in order to replace Peter Bromilow in 1957, another talented young man had joined them—Utpal Dutt, his booming Gratiano was enthusiastically received, and his rich voice lent itself well to Shakespearean plays. With him came another versatile young man—Marcus Murch, who joined as a student straight from Sherwood College, and like Flute he must have protested in vain, 'Faith let me not play a woman. I have a beard coming.' But play a woman he did, and most convincingly as the governess in *The Importance of Being Ernest*.

Among their most memorable seasons were the ones in Simla, whither they went to escape the murderous heat of the plains. There they not only performed for the schools time and again, but also gave many public performances at the little Gaiety Theatre, their audience on one occasion including Pandit Nehru and Mrs Gandhi.

By now, Frank Wheatley, who had been touring India with a one man show, also joined them. His 70 years did not deter him in taking an active part in the proceedings both on and off the stage. Another new entrant at this time was Anwar Mirza (as Antonio in *Twelfth Night* and Alonzo in *The Tempest*).

They managed remarkably well, considering they had no backers, no centre, no home to which they could retreat when things were not going smoothly. Though their life was not a bed of roses, it undoubtedly had its hilarious moments.

There was the occasion in Navsari when one of the cast ordered a bottle of lemonade during the interval. The lemonade did turn up—but after the performance of Othello was well under way, with the bearer walking right on to the stage with the lemonade on a tray!

Among other memorable performances was one for the Maharajah of Mysore—*The Merchant of Venice*—in his private theatre. Not only was the female section of the audience in strict purdah, but no applause was forthcoming, making the cast feel they were performing for rows of effigies—big turbans in front and small ones behind. However, the Maharajah most graciously asked to meet them at the end of the show before being wafted off in his pink Rolls Royce.

Improvising props had its drawbacks. There was the occasion when, during a performance of Macbeth, a school table with an attached bench was being used for the feast. Of course it tipped over backwards, until Geoffrey Kendal quite literally put his foot down, exhorting the company repeatedly to be seated!

Among other unintentionally amusing performances was one in the East. The theatre usually housed Chinese opera and the auditorium was timbered only halfway. This was ideal for the clashing of cymbals and gongs, but a little hard on the subtleties of Shakespeare. Portia would request "Let there be music" and Elvis Presley, from some nearby loudspeaker, would respond with *Jailhouse Rock*. Lorenzo would declaim "Come ho! Wake Diana with a hymn!", hardly expecting Bing Crosby to oblige with a rendering of *Silent Night*.

They were a self-sufficient group and were their own stage-hands, carpenters, set designers and costumers. Every ounce of time and talent was fully utilised.

On another occasion, in Delhi, Othello had just announced that "the affrighted globe should yawn at alteration" when violent tremors promptly shook the hall. Naturally, there was a rush towards the exits, and Desdemona already "dead", resurrected to join them. However, the moment the shockwaves had passed, audience and players alike resumed their places, and Othello continued uninterrupted.

The competition in India at that time was from the great Prithviraj Kapoor himself. Of course, his shows were of a completely different genre, and Conor Farrington recalls seeing one of them with its full complement of dancers, musicians and singers, during the course of which an entire wall was erected across the stage bit by bit because the story called for it. Quite a contrast to the limited props of the Shakespeareana group and the equally limited cast where each member frequently played more than one role in the course of a play.

It was only natural that two people coming from families totally steeped in theatrical tradition should find a great deal in common, and no one was a bit surprised when Shashi Kapoor and Jennifer set the seal by announcing their marriage. Shashi's gain was Shakespeareana's loss for the stage was deprived of Jennifer's tremendous potential while she stayed at home to raise a family. Fortunately, during the last few years she has again given the world the benefit of her talents by her superb performances in *Junoon* and *36 Chowringhee Lane*. The years of rigorous training under her parents are finally being well utilised.

For the 'Shakespearewallahs' it was one long frantic rush from the crack of dawn till late at night, rehearsing, shifting, packing, travelling. In the heat and in the cold, in luxurious private theatres, in broken down buildings, in well equipped halls and under shabby shamianas, and once even in a laboratory.

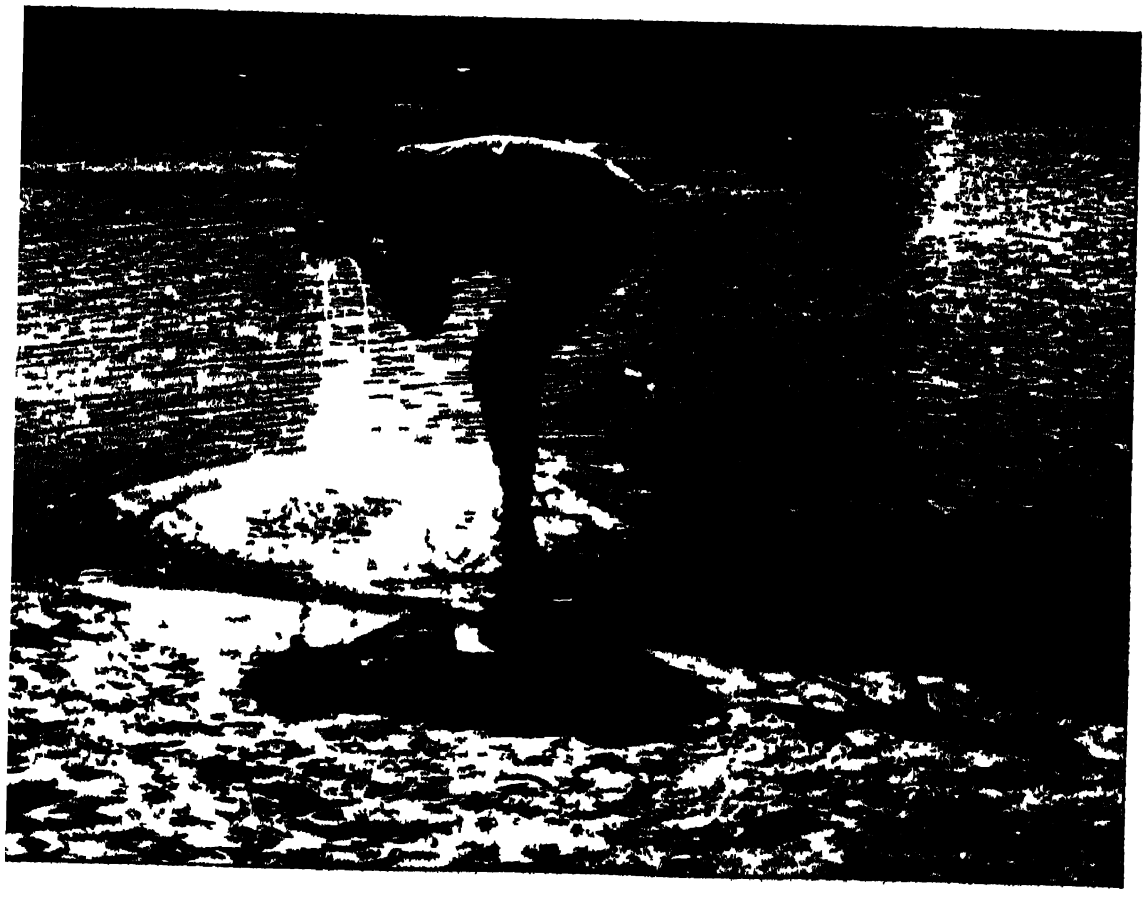
After 17 years of touring, they decided to call it a day as far as this country was concerned. The Kendals began to feel rightly, that the financial gain as a touring company was not commensurate with the time and effort put in. Travelling was becoming increasingly costly, and living in hotels an expensive proposition. For years their charges for both schools and public performances had remained static, and there was very little to show for it in spite of the fact that not an extra rupee was spent on paying hired hands to help with stage or settings or packing. They made their way to the Far East, finding things far more comfortable in Malaysia, Hong Kong and Japan.

And whither are all these players fled?

Conor Farrington's talents are being utilised by Radio Eiran in Dublin, and John Day is as much at home as an antique dealer as he was as Launcelot Gobbo or Sergius. Brian Kellet is still very much involved in the London stage, though over the years has graduated from a romantic Bassanio to a dramatic Shylock. Peter Bromilow, who had joined in 1955 for a couple of years, has made quite a mark for himself in Hollywood having won an Emmy for his performance as St Thomas Aquinas in *Meeting of the Minds*. Apart from a number of appearances on TV his latest display of talent has been with Faye Dunaway in *Evita*.

Felicity Kendal, now a mature woman, has made a niche for herself in Shaftesbury Avenue. Jennifer, as we know, keeps herself busy with the management of the Prithvi Theatre. Utpal's career is too well known to need any chronicling here.

The Kendals are now settled in London and the Shakespeareana [illegible] still very much alive. They still come back to India frequently, not only to visit their daughter Jennifer, but to the country they still consider their spiritual home. They give recitals and readings to small select gatherings, and Geoffrey Kendal has shown that he has lost none of his talents with the passing years by his performance in *36*. The Kendals have learnt to travel light, carrying no more than "two suitcases and a folding chair". Like Hamlet, all we can do is see that they are "well used", for they are the abstracts and the brief chronicles of our times. ■



Photographs and Text by Kovai Sitharam

IT happened thirty years ago My very first photographs, taken with a Kodak Brownie Crest camera, were appreciated immensely not only by the studio owner but also by a gentleman who was sitting beside me A few minutes later, I learnt that he was a senior member of the Coimbatore Amateur Photographic Society and also my neighbour!

When I am very perturbed about some problem, photography offers me an escape and gives me renewed strength to face life I become one with the subject

My photographs have been published in about 78 magazines.

That's Business

From Our Special Correspondents

DURING the run up to the Finance Bill, businessmen cried themselves hoarse over the jettisoning of section 35B from the Income Tax Act but Mr Pranab Mukherjee refused to budge pouring salt over their wounds by describing the step as a rudimentary expenditure tax in disguise Section 35B enabled businessmen to deduct from their income Rs 330 spent on export promotion for the purpose of tax assessment Hence the long wail of anguish

The view of Mr Manmohan Singh Chairman Frick India Ltd, is typical At a time when exporters are up against world recession they need more incentives, not less of them But otherwise his condour is atypical Says Mr Singh "A more fundamental problem is India s poor image in terms of quality products and delivery defaults Further businessmen only want to play to the tune of vested interests It is high time they summoned up the courage to be more ethical in their businesses"

The Faridabad based Frick India, having 40 per cent American equity, is a major exporter of industrial air-conditioning and refrigeration equipment to West Asian countries, Sri Lanka and Bangladesh But Mr Singh is diversifying Trion India Ltd, a new company also started with American technical collaboration has started production of "electronic filters' which remove dust, smoke and pollen from sensitive places like computer installations and telephone exchanges The gadget has already been supplied to 80 telephone exchanges Another new company Walco Ltd, will make pre fabricated structures for high altitude housing Mr Singh is evidently aiming at the Army

Section 35B

Mr B D Kapur, Chairman Atlas Cycle Industries Ltd, also does not relish an export scenario minus Section 35B If there was misuse, the Government should have checked it not taken away the incentive itself

However, it should not materially impair his ability to push (or pedal) his Atlas cycle abroad as the market for it seems to be well established Every month over 10,000 cycles coming out of the Sonepat factory find their way to East Africa, West Asia, Britain and Denmark And when I met him, he was considering how to make a colourful children's bicycle with red tyres for Canadian $30 a piece A Canadian party has promised to buy 3 lakh bicycles if he can do that

But if Mr Kapur can consider making an export quality cycle, albeit one less than the adult size, for Cnd $30 (Rs 240), can he not consider reducing the domestic price of Atlas (Rs 400) and Eastern Star (Rs 350)? If he were to do so, lakhs of Indians who hire cycles because they canot afford to buy them will have reason to thank him After all, Atlas Cycle Industries is making large profits

While securing Government approval for increasing his factory's capacity from 12 lakh to 18 lakh cycles per annum, Mr Kapur has simultaneously launched into mopeds Will this not cut into his own cycle market? He thinks not, for Indians will remain sufficiently poor for the next several decades

The scramble for scooters has virtually become a scrimmage, resulting in a bonanza for the few companies in the field Sources in the Industry Ministry disclose that Rs 160 3 crore have been collected as advance against bookings The break-up is Lohia Machines, Kanpur, Rs 96 crore, Bajaj Auto, Pune, Rs 57 crore, Scooters India, Lucknow Rs 5 crore, and Andhra Pradesh Scooters, Medak, Rs 2 3 crore

Although both have secured approval for collaboration with the well reputed Piaggio of Italy, Lohia Machines' obtrusiveness has appeared somewhat jarring against the low profile of Andhra Pradesh Scooters The former's frenetic bid to mop up the potential market has raised eyebrows And, as a simple arithmetical exercise shows, not without reason Since the advance for a scooter booking is Rs 500, it means that Lohia Machines have booked orders for over 19 lakh scooters Considering that the company is unlikely to start production before next year, and its licensed capacity is only 10,000 scooters, it will take Lohia Machines at least two decades to meet their present obligation The Rs 57 crore collected by Bajaj Auto is only for its proposed 50 cc moped However, Bajaj and Maharashtra Scooters, a joint venture of the Maharashtra Government and Bajaj Auto, have started accepting advances for scooters for which figures are not available

MR B D KAPUR Chairman Atlas Cycle Industries Ltd

Faced with a furore in Parliament, the Government reacted with a Pavlovian reflex It promised an inquiry Instead it should issue some more licences for the manufacture of scooters The supply and demand figures are tell tale Whereas the present annual production of scooters is approximately 25,000, the demand officially 325,000—an estimate which is evidently erroneous in view of the huge number of bookings

Bajaj Auto, Lohia Machines and Piaggio compromise a piquant triangle Piaggio, which used to collaborate with Bajaj Auto is now locked in litigation with it in the USA, West Germany and Britain and has simultaneously re entered the Indian market as collaborator with another Indian company Is there politics involved? Is the Bajaj family being made to live down its once vociferous occupancy of the Janata bandwagon? Understandably, little love is lost between Bajaj Auto and Lohia Machines

'Government Touch'

In our country the "Government touch" would seem to be the reverse of the "Midas touch", for most things the Government of India touches turn into a losing proposition The public sector Scooters India Limited is the only loser in the field, having accumulated losses above Rs 32 crore over the last seven years Here is a clue to the company's red record SIL pays nearly Rs 20 lakh as salary to 37 senior executives!

From Rs 2 a day with the Tatas to simultaneous Chairmanship of two major organisations, Indian Airlines and the Public

Enterprises Selection Board, is a rise that would find a parallel only in the world of rocketry. Whatever his other qualities, Mr R.P. Billimoria is a disarmingly charming man with a prosperous double chin that brings to mind Sir Robert Morley. Insisting that he is not overburdened, Mr Billimoria clarifies that for IAC and PESB he is part-time Chairman, taking only "sitting fees" and the perks. In fact, he continues to run his Billimoria Consultants Pvt Ltd. "The arrangement has the advantage that I am not subject to pressures and also better placed to receive the feedback." This may be debatable, but the unusual nature of the arrangement is not.

As to the inordinate delays that are known to occur in filling the posts of chief executives of public enterprises, it would seem, from the procedure, that the blame cannot be laid entirely at the door of the PESB. First, it is for the Ministry concerned to notify a vacancy to the PSEB, which then prepares a list of names with the help of its data bank. Then the Ministry and the PSEB jointly prune it to a short list. After this the PESB holds interviews and sends a panel of names to the Ministry, which in turn forwards it to the appointments committee of the Cabinet for the final selection. At his end, Mr Billimoria is trying to speed things up, and interviews are being held on most Fridays and Saturdays. The backlog of senior-level vacancies, which had assumed scandalous proportions about a year ago, is now more manageable, being 45. Of these, 16 are Level I posts of chairmen and managing directors, and 29 are Level II posts of directors. The number of posts pending for processing at the PSEB is, however, 15, which means that the remaining posts are stuck in the governmental pipeline.

Persistent criticism that public enterprises should be freed from the stranglehold of bureaucracts because they are essentially birds of passage, has had some effect. An important decision which was taken recently but remains little-known is that after an IAS officer joins a public enterprise he must, within two years, exercise the option of either returning to his cadre or resigning and joining the public enterprises management pool.

Dealership Imbroglio

Hyper-technicality is often used as a figleaf. And so it was in the Lok Sabha when the Minister of Industry, Mr N.D. Tiwari, was asked whether the ten-year-old imbroglio over dealerships for the Maruti project had been resolved. With a deadpan expression that bespoke his adeptness in the art of dissimulation, Mr Tiwari said: "Maruti Udyog Ltd, was established in February 1981 and hence the question of granting dealerships about ten years ago does not arise." The questioner evidently did not know that the word "Udyog" was interposed after the company was nationalised, and this provided the Minister with an escape route.

The fact of the matter is that huge sums were taken from a large number of dealers by the late Sanjay Gandhi's Maruti and that most of them lost their money when the company went into liquidation. Interestingly, MAN of Germany still has in its dossier a ten-year agreement signed with the original Maruti. Says a representative of the company: "We could have gone to court but thought the better of it because we have to do business in this country."

Maruti Udyog's commercial production, in collaboration with Suzuki of Japan, is expected to begin in April 1984. Some cleverly camouflaged tax concessions have enabled the company to announce that the car will cost Rs 45,000, exclusive of transportation costs and local taxes. As 20,000 vehicles are prepared to be manufactured in the first quarter, other car manufacturers are getting goose pimples. Anyhow, a breeze of competition is what the inefficient car industry needs.

Over a dozen Suzuki models, already shipped from Japan, are due to arrive at the Calcutta port and will be displayed in various cities under the Maruti name. But dealerships for the company in its new incarnation have yet to be granted. Once bitten, twice shy. ■

The Abohar Cooperative Spinning Mills Limited, Abohar.

Second Cooperative Spinning Mills of Cotton Growers in production For the benefit of cotton growing farmer members by Producing:-

* **Employment opportunity to more than 1200 persons.**
* **Remunerative prices to the farmers for their produce.**
* **Extension service for cotton development.**

let us pledge to build our Nation stronger and more prosperous, take stock of the rapid strides taken by our State in this direction, under the progressive and inspired leadership of S. Darbara Singh, Chief Minister of Punjab.

20-Point Programme & State Plan:

Rs. 443.24 crores were earmarked during 1982-83 for implementing 20-Point Socio-Economic Programme given by our Prime Minister, Mrs. Indira Gandhi.

Plan outlay has been raised from Rs. 260 in 1979-80 to Rs. 385 crores in 1982-83. For 1983-84 it is planned at Rs. 437 crores.

Record Agricultural Output and assured prices to the Farmers

Wheat production rose from 76.77 lakh tonnes in Rabi 1980 to an all time record of 85.53 lakh tonnes in Rabi 1982. Paddy production increased from 42.9 lakh tonnes in Kharif 1979 to 55 lakh tonnes in Kharif 1982, despite draught conditions this year.

Farmers were paid a price of Rs. 142/- per quintal for wheat during Rabi 1982.

Modernisation of Irrigation facilities

One lakh hectares additional area brought under irrigation. The work of lining 4060 Kms. canal distributories and minors costing Rs. 100 crores under World Bank Scheme is nearing completion.

Priority for Power generation

1. Total installation generation capacity of power in the State is being increased from 1537 MW to 2548 MW by 1984-85.
2. The work on Mukerian and Anandpur Sahib Hydel projects and first unit of 210 MW capacity of Ropar Thermal Plant is going on war footing and 350 MW of additional power would be available during 1983.

Industrialisation of State

1. Light Commercial vehicle project with Japanese collaboration is being set-up in Hoshiarpur district.
2. 93 letter of intents, 43 Industrial licences and 468 letters of registration have been obtained since June 1980.
3. 53 new large and medium units were pressed into production with an investment of Rs. 69.17 crores.
4. An all time larger number of 25728 small scale units with an investment of Rs. 102.89 crores set up as against 7871 during 1978-79.

* Total employment directly and indirectly generated to 1,75,000 persons.

Modern amenities to towns and villages

1. Rural Development Agency set up to accelerate the rural development works.
2. Massive amount of over Rs. 40 crores spent for pavement streets, drains and construction of Panchayat Ghars.
3. Piped water supply to 176 more scarcity villages has been provided.
4. 66.70 crore projects for water and sewerage in 8 towns are going on top speed.
5. Projects for drinking water supply in 9 towns are under completion. 27 more towns under water supply and 11 under sewerage scheme have been taken up.

Uplift of the Weaker Sections

Rs. 65 crores disbursed as interest free loans and subsidy to over 2 lakh families out of 8.24 lakh household identified for the first time as living below poverty line, having income less than Rs. 3600 per annum.

22,000 houses constructed for landless agricultural workers and a total of 54,000 houses to be constructed by March, 1985.

Roads and Bridges

20 bridges have been completed and work on another 30 is in progress. Work on Rs. 5 crore bridge on Satluj near Anandpur Sahib is going on round the clock.

Improved Health Facilities

1. 450 subsidiary Health Centres, 500 Ayurvedic, Unani and Homeopathic dispensaries, fifty 25-beded hospitals, 30 dental clinics and large number of drug distribution centres have been opened.
2. Dilaysis service has been provided at Amritsar. Similar service at Patiala is being added.

Let us all join to make concerted efforts for development of Punjab which is synonymous for Peace, Prosperity and Plenty

Inserted by
PRD Punjab

April 14, 1944, was the day the 9000-ton cargo ship *Fort Stikene,* loaded with an ill-assorted cargo of 1500 tons of TNT, 3000 tons of full pressed cotton bales and 130 gold ingots, was blown to smithereens in the Princess and Victoria Dock, shaking Bombay to its foundations and raining gold and fire over the city. The blast killed thousands of people and devastated the entire harbour area of Bombay with its docks and transit sheds, cotton and grain godowns, petrol and diesel installations. A good part of the city burned for weeks and nothing could be done to effectively control the raging fire as all the fire-engines in Bombay and the suburbs, and even from distant Poona, were concentrated at the pier to pump water into the holds of the burning *Stikene,* and had vanished with the crew as the ship exploded.

No publicly known efforts were ever made to assess the loss of lives and property and if any information was collected for some sort of rough estimate, the results were never published as all details of the disaster were suppressed for security reasons What is offered to our readers here is an imaginative reconstruction (erected painstakingly on the available data) of what happened during that fateful week in April, 39 years ago

AT the time of the explosion in which I nearly lost my life, I was staying in Port Trust Quarters inside the Princess and Victoria Dock, hardly 100 metres from the wrecked ship The building collapsed as if by an earthquake and I was caught in the debris By a miracle I was able to struggle out and crawl to a hospital with a broken heel

The house I was staying in was an old wooden structure, originally the railway office of the P & V Dock, later improvised into staff quarters for officers of the Senior Subordinate Cadre It was a double-storeyed building with four flats, two on the ground floor and two on the first But to begin at the beginning I joined the Bombay Port Trust in 1941, when the tempo of the Second World War was gaining momentum, and all over India there was a shortage of skilled, trained staff, particularly in the railways and the ports I was appointed a Special Duty Officer for the expeditious turn round of rolling stock It was a newly created post intended to cope with the increased volume of traffic the Port Railway had to handle I was given to understand that the post was to last for the duration of the war, with some possibility of permanency

The Bombay Port Trust Railway was, in linear dimensions, about eleven kilometres starting from Ballard Pier the Bombay Terminal for seaborne passenger traffic, and the ending at Wadala, the junction where trains were received from made over to the GIP and BB & CI Railways Though the main track between Wadala and Ballard Pier was short the Port Trust Railway had, in sidings, feeder lines and marshalling yards about two thousand kilometres of rail length

With the fall of Singapore and Burma to the Japanese, the little Bombay Port Trust Railway became the main hub of the rolling

stock in India. The ports on the Bay of Bengal were unsafe for military concentrations due to the easy accessibility of enemy planes from bases in Burma and Malaya, and from aircraft carriers, as the Japanese had practical control of the Bay.

1944 was a momentous year for the Bombay Port. An all-out effort was made to launch a massive attack on Japanese positions in Burma and Malaya under the supreme command of Mountbatten. By the beginning of the year Bombay Port was literally swarming with officers and men of the fighting wings of the Allied Forces detailed to supervise and expedite the loading of ships with arms, ammunition, food, clothing and medicines, which were to leave in convoys to unknown destinations. Wagons started flooding the docks from all over India, while troop trains daily brought in fighting personnel in their thousands. We learnt from military personnel, unofficially though, that hundreds of ships were scheduled to sail to the Bay of Bengal by April, well before the onset of the South West Monsoon

Wagons carrying arms and ammunition usually came in block loads escorted by military personnel and were not difficult for the railway staff to handle But odd wagons of supplies were different Though army squads chased wagons almost from the starting points to the destination and there were tracers at every important marshalling years, missing wagons were many—not only because of misdespatch but also because of mutilation of wagon numbers in telegrams.

THE four flats, in our building were allotted to Special Duty Officers who were in charge of clearing bottlenecks and attending to urgent requirements of the militia, and each officer had to supervise the work of a particular area

Of the flats on the ground floor, one was occupied by a Franco-Burman refugee from Rangoon who was taken into the service of the Bombay Port Trust Railway. He was a hefty, broad-shouldered, square-faced individual who worked like a horse, ate like a wolf, drank like a fish, swore like a trooper and indulged in sex like a stud bull. With all this he was a staunch Catholic who went to church on Sundays and abstained from meat on Fridays. His name was Jean Bourbon; his friends and colleagues called him Jim, the staff who worked under him, *Jin Sahib* after the Jinns of the Arabian Nights. Jim had a working knowledge of the filthy vocabulary in Hindustani, could be positively fierce when roused and often corrected his erring staff by blows He was a man with tremendous drive and the military officers in general, and our General Manager in particular, liked him immensely as he could be depended upon to handle any situation without the least show of reluctance or hesitation.

Jim's flat was a veritable storehouse of Scotch, Cognac, gin, rum, beer and tinned foodstuffs, and every other night there was a cocktail party in his flat. His guests were mostly army officers and their women friends. The parties often continued till the small hours of the night, but the one peculiarity of Jim and his friends was that the harder they drank, the more sober they became. The revelries were never boisterous and did not disturb the neighbours. Jim had no cook or servant, and a restaurant just outside the dock gate catered to his culinary needs. His peon lived between the restaurant and his flat, always bringing in something and taking back something else, the watchmen and customs staff at the gate being indulgent towards him because of their respect for his master. Jim had no wife. It seems he had had one in Burma but she left him before he left Rangoon and he did not miss her in Bombay.

The other flat on the ground floor was occupied by a Parsi by the name of Pestonji Daruvala. Unlike the generality of Parsis, he had an aversion to liquor. His father Byramji died of drinking and the son's reaction was a hatred of alcohol. Pestonji, at home, wore a thin muslin shirt with the *kusti* or sacred thread round his waist and a black cap too small for his large head. Pestonji's wife Shirin did not hate intoxicants; though not addicted to strong drinks, she was fond of home-made wine which her cook, an elderly Mahar woman, prepared for her to near perfection. Shirin was a shapely woman with an olive complexion, bobbed hair and a stately swing to her gait. She had pleasing manners, too.

PESTONJI was something of a scholar well versed in Zoroastrian lore. I was interested in comparative religion and when both of us were free I used to spend some time in his flat, Shirin and myself sipping wine, Pestonji coffee, from a double cup. He knew Persian history from the time of Cyrus and Zarthustra till the conquests of the Sassanids by the Arabs. He could also speak with authority on the Parsis, their exodus from Iran to Western India, their fortunes in Gujarat and in Bombay under the British. He belonged to the Shahinshahi persuasion, and held that the other sects of Parsis particularly the Kadimis and the Fazlis, were heretics fallen from grace, and could say exactly when and where they had gone wrong.

Pestonji's one weakness was betting on cotton figures, Bombay's favourite form of gambling called *sutta*. No one knew, not even his wife, how much he lost or gained in *sutta*. Shirin was not, however, much concerned about his gambling as her father had left her a tidy sum which she was free to spend on herself. Nor was she very strong on religion. She did not mind living a Parsi, she would say, but did not like to die a Parsi because of her dread of the fate that awaited her body in the Tower of Silence. She was educated in a Convent school and Christian influence was possibly responsible for this dread. She was not in favour of burial either, but preferred cremation. She did not, however, like the way the Hindus cremated their dead and hoped that before her death Bombay would have an electric crematorium, in which case she intended to bequeath her dead body and half her fortune to the trustees of the crematorium.

In spite of their differences of opinion in many matters, Pestonji and Shirin were reasonably happy in married life. Like intelligent people they believed that married happiness was dependent upon the willingness of each partner to suffer, without complaint, the idiosyncracies of the other. They had no children, but took a philosophic view of their sterility and were happy in the thought that to have wicked progeny was worse than having none.

I lived in the flat above Jim's and my next-door neighbour was Samson Judah, a Beni-Israeli, whose grandfather had come from Poona and settled in Bombay. Samson was a well-built individual of light brown complexion with bushy side-locks, a walrus moustache and a slightly hooked nose. He spoke English with a Marathi accent. When I first went to have a look at my flat, allotted to me on appointment, it was Samson who showed me the place as the key was with him. Samson's wife and daughter were in the house and he introduced them to me.

His wife Raechel was a sour-faced, middle-aged woman. She said a few words to me in Marathi, which I did not understand and disappeared into her bedroom. Samson's daughter Esther, a pretty teenager, on the other hand, was a friendly girl; she spoke English fluently, came along with Samson and showed me the whole place, even the kitchen and the servant's room in the annexe.

I ORDERED some furniture, moved into my flat and bought a second hand car. There was no need for me to have a car to go to my place of work, the Wadala marshalling yard which was about ten kilometres from P & V Docks with a shuttle rail coach service running between Wadala and Alexandra Dock for the convenience of the staff. My main purpose in buying a car was to go to the Juhu beach on weekends for a dip in the sea, my favourite relaxation.

As I got better acquainted with my neighbours I came to know more about Samson's domestic affairs. Samson's first wife had died when Esther, their only child, was ten years of age. As he found it difficult to manage the affairs of the house he had married his present wife, Raechel. From then on his misery started.

Raechel was a garrulous, irritable woman with fixed notions about propriety and the ideal behaviour for Hebrews in general and Beni-Israel's in particular. She strongly disapproved of everything in Samson's flat including himself. The way he dressed, his food habits. She disapproved of Esther and the way she had been brought up. She thoroughly disapproved of her education in an English medium school and maintained

that she ought to have been taught Hebrew and Marathi.

Raechel's feelings towards Esther were more than amply reciprocated by the girl. She thoroughly hated her stepmother and felt that her father was neglecting her and doting on his new wife. Between the two, Samson found his work, strenuous as it was, a relief from his domestic problems. He started drinking, too. He was scared to come home lest he should, as he once confided in me, beat his wife to death and be convicted for culpable homicide.

Esther was studying in High School. As she could not do her work at home because of the nagging by her stepmother, she came to my flat frequently to study in peace. Often it happened that she had to skip a meal at home, as Raechel told her that she was not her servant to cook for her and serve her, and a woman who did not cook did not deserve to eat. I left instructions with my cook, Madhavan, a quiet, intelligent young man from Cannanore who also had a driving licence, to serve Esther food at mealtimes if she was in the house, and to drive her to the school if, at any time she found it difficult to get conveyance. Madhavan too, seemed to dislike Raechel and was quite happy to be of service to Esther. "Sir, if I may say this, I know what it is to live with a stepmother My mother died when I was eleven years of age and my father married again after six months. My elder brother and I both ran away from home." I could not help smiling, as Madhavan said this with intense emotion.

Esther almost lived in my falt, especially when Solomon was not at home, and went to her house only to sleep. This made Raechel hate me as much as she hated Esther. And when Jim occupied his flat on the ground floor and started his gay life, Raechel felt that the Port Trust quarters were not fit Hebrew habitation. As a community, Christians, she felt, were immoral and bad company for Hebrews, and the nocturnal activities of Jim and his friends did nothing to change her opinion. And she would censure ballroom dancing in which men pranced about hugging other people's wives, as further proof of Christian levity. The Parsis, according to Raechel, were little better. Shirin used to attend the Port Trust Recreation Club, especially when there was a dance. Pestonji seldom went to the Club but Shrin's brother Feroze was a good dancer and a lover of Western music and he used to take her to the Club when there was a dance.

Apart from Raechel and her tirades against humanity, which were fortunately confined to her own flat, the four of us, men, who occupied the quarters were quite friendly in spite of our differing ways of life. Jim was the Special Duty Officer in Ballard Pier and Alexandra Dock, Samson at P & V Dock, Pestonji at the Depots (Oil Depot, Grain Depot, Manganese Depot, Stores Depot and Cotton Depot) and myself at Wadala. We were so friendly and cooperative that if any of us could not because of illness or any other reason, attend duty, those of us who were able to would volunteer to do his job. Because of Jim's peculiar habits, Samson and the Daruvalas seldom visited his flat but I, being a bachelor attended his parties when pressed by him.

After he had taken a few drinks, Jim would affectionately call me "Padre", and warn me that reading and writing were not the only things, that mattered, that I was missing life by a mile. I would retort, pretending to be drunk on beer, that wine and women were not the end of life, either. Anyway, I could not convert Jim and he couldn't convert me, and we agreed to differ on our views on life. Jim, however, could appreciate the value of reading and writing as he would pass on to me his draft reports of accidents and other important matters for brushing up the language before submission to the head office.

Apart from the domestic quarrels in Samson's house which had their repercussions on mine, too, things went fairly well in the Port Trust quarters. The allotments conformed to the general staff pattern in Senior Subordinate Service of Indian Railways and Ports, which was dominated, during the British period, by communities other than Hindus and Muslims; incumbents in this cadre of service lived in a permissive society of their own and were not harshly critical of social or moral deviation in the behaviour of its members.

ESTHER passed out of high school and started attending stenography classes in a commercial college near Flora Fountain, which gave Raechel an additional cause, if one was needed, for complaint against her husband and his daughter. Raechel wanted Esther to stay at home and assist her in cooking and housekeeping, especially as she had no regular servant, and train herself for the married state But Esther was determined to study stenography and land a secretarial job. Samson, who knew very well what to expect if Raechel and her step daughter worked together at home, decided in favour of stenography. I was, at the time, working on the manuscript of a book a Bombay publisher had commissioned me to write for him, and Esther used to help me with the typing. She was out of her home practically the whole day either in the commercial college or in my house. And then one day something happened which settled, once for all, the incessant quarrel between Raechel and Esther and brought peace to Samson's household.

It happened in January, 1943. All four of us, men, were out on duty and Shirin had gone to visit her brother. Esther had no class and was at home reading a book. Raechel who was slogging in the kitchen, cooking lunch, came into the living room to fetch something and found her indolent stepdaughter reclining on a sofa, indulging in the futile occupation of reading. Raechel started her routine exercise in nagging. Esther closed her book and began to talk back. Tempers rose high on either side, Raechel said something nasty about Esther and me,and the girl thoroughly roused, dealt her stepmother a blow on her mouth, which loosened three front teeth. Esther then rushed to my flat and closed and bolted the door.

Raechel, furious as a wounded tigress, chased after her. Finding the door bolted she ran to her kitchen for some sizeable weapon with which to batter the door. Not finding one, she rushed by the back door to my kitchen where Madhavan was cutting bones for soup, snatched the chopper from his hand and started hacking the living-room door with it. Madhavan, who had by now collected his wits, followed her and asked her to behave herself and give back his chopper. On this Raechel turned on him with the chopper raised and the young man who hailed from Cannanore, the home of *Kalari Payattu*, by a stroke of his palm on her elbow made Raechel drop the chopper and she stood there writhing in pain. He then led her to her flat closed and bolted the door and went down to wait for my arrival as it was almost lunch time.

I came shortly and Madhavan quite worried, narrated to me the whole incident. Shirin's servant was peering at us; fortunately there was no one else about. I asked Esther to open the door and told Madhavan to go to the P and V Dock railway office and call Samson. As I entered the flat, Esther started sobbing. I consoled her as best I could and assured her that some arrangement would be made to avoid a repetition of the day's incident, I made her lie down and waited for Samson. I was quite worried over what had happened, especially if Samson took a serious view of what Madhavan had done. If he made a complaint to the head office, I would be asked to get rid of my servant immediately, as discipline was strict in those days and if an officer made a complaint that the servant of his neighbour had assaulted his wife, the servant would have to leave without any further enquiry into the case. And I did not want to send away Madhavan. He was an honest, loyal lad who worked very hard and was quite attached to me. He was never absent. The only day in the month he took a couple of hours' off was on pay day when he went to give his wages to his brother who worked as a mechanic in a garage in Kurla. Madhavan was a fairly good cook and knew the dishes I relished. Like the generality of Thiyyas of North Kerala, he was handsome and looked quite smart when he drove my car.

WHEN Samson arrived, I told him in detail all that had happened and stressed the fact that it was in self-defence that Madhavan had stayed the blow, as otherwise Raechel, could have struck him with the chopper and killed him. Samson could see my point. Anyway, what needed immediate attention was not Raechel's elbow but her teeth and I

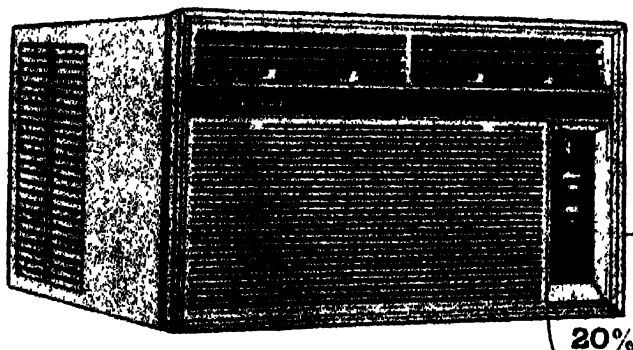
More than built-in quality

an air of excellence



20% more cooling*

* Determined by psychometric tests.

Spencer's Airconditioners

Let Spencer's air-conditioner breathe the air of excellence into your life

Built with the highest cooling capacity and for continuous, uniform cooling efficiency, Spencer's airconditioner is ideal for offices and homes. The work horse compressor in the Spencer's airconditioner just whispers its enduring presence delivering optimum cooling efficiency day after day. Every other component in the Spencer's airconditioner is engineered to exude the same air of excellence.

Spencer's expert trouble-shooters are on call to set right any disorder, and to carry out preventive maintenance on an on-going basis.

When you can buy excellence why settle for less?

Available on DGS & D rates and concessional excise terms.

asked Samson to take her to a dentist. Samson now opened his flat and got in and I asked Madhavan to go downstairs. Presently Samson came leading Raechel, who was bleeding from the mouth. She looked quite exhausted and I offered to drive her and Samson to the dentist. Raechel, showering abuses on me, stuttered through her broken teeth that she would rather die than board my cursed car. On this Samson got a taxi and took Raechel to the dentist.

I now turned to Esther, who was lying on a sofa in my flat and crying bitterly. She had cried herself hoarse and said in a hushed voice that she wanted to kill herself. With no mother, brother or sister and no place to go to, and with a father who was helpless against her stepmother who thirsted for her blood, the only thing she could do was to commit suicide. I told her that things were not as bad as she was imagining, that she could easily get a job if she wanted, and if she found it impossible to live with her stepmother she could live in some hostel. It was lunch time. I asked Madhavan to lay the table for our lunch. Esther ate very little, and I asked her to lie down again.

Samson came back in a couple of hours' time, but Raechel was not with him. From the dentist's they had gone to Raechel's brother who was staying at Jacob Circle. Samson and I now discussed what was to be done next. We agreed that it would not be advisable to let Raechel and Esther live together, at least for some time, and I suggested that Esther should be sent to the YWCA and I could arrange for her accommodation as I knew the secretary. Samson agreed, but said he must ask Raechel about it as she was swearing that she would not come back to the Port Trust quarters. So after lunch, Samson left for Jacob Circle to find out what Raechel thought of the proposal.

When Samson came back late at night, he told me that Raechel would not return to the flat but would stay with her brother. Raechel's brother was prepared to let her stay with him, provided Samson gave her a third of his salary. The arrangement was welcomed by all, including Esther, who undertook to keep house for both of us, with Madhavan as the common cook. This seemed to work well. Raechel, on her part, appeared regularly at the head office on pay day and collected her alimony, as she knew very well that money which came into Samson's hands was as good as lost what with his drinking habit and the debts he had accumulated.

ESTHER was now the virtual mistress of both the flats. When all three were at home, we often had our meals together. As his domestic tension eased, Samson, under the influence of Esther steadily reduced his drinking which was now restricted to a small appetiser before the principal meals. With all this, Samson and I felt that the arrangement could not last long, as Esther would get married in the not very distant future and Samson would be compelled to fall back on his wife, shrew as she was. Hence Samson and I put our heads together and decided to find a suitable husband for Esther. I asked Samson to suggest the matter to her when the two of them were alone together; but Samson thought that it would be better if I broached the subject, as otherwise she might think it was his ruse to get rid of her and bring Raechel back. I agreed and an opportunity soon offered itself.

It was, if I remember right, in January 1944, that Esther and I had a chat about marriage and morals in general and Esther's marriage in particular. It was about 3 pm when Esther walked into my library-cum-study where I was correcting my manuscript. She wanted to help me with the typing. She was looking exceptionally charming that day in a new dress.

"You look wonderful, Esther," I said.

Esther smiled her thanks as she sat down before the typewriter, opened the cover and ran her fingers over the keyboard. The last sheet she had typed was still on the roller and she read out the last line for me to dictate the next. Just then the door bell rang.

Jim barged in. "Hello, ol' chap," he said affectionately, flourishing a couple of sheets of paper in his hand, "This is the report of the last week's derailment I told you about. Go through it like a good pal, won't you?"

"Won't you come in, Jim?"

"Not now, ol' chap," he said, "I am in a hurry." I closed the door behind him, placed the report on a teapoy to be handled at leisure, and went back to Esther. I began to dictate, but she did not start typing. Instead, she asked, "Why do you befriend him, Uncle?" and added, with intense conviction, "He is a bad man."

I was amused. "Why, my Guardian Angel," I said half in jest, half in earnest, "who told you that?"

"Why do you attend his parties?" she asked, and added after a moment's hesitation, "A man is known by the company he keeps... I am sorry if I have offended you."

Well, having weaned her father from the bottle, Esther possibly thought that she had a duty towards her uncle, too. I did not want her to feel that she had offended me and said, "You are right, in a way, Esther. But I do not keep the company he keeps. Though I have at times attended his parties, I always leave his flat before the undressing starts. That's why he calls me "Padre". I talk like this, Esther, because I feel that you are no more a girl but a young woman who ought to know something about the ways of the world... Also it is easy for a man to be good in the company of the good; the real test of character is his ability to remain good in the company of the bad."

"You are a philosopher, Uncle," she said, "and I am no match for you."

She started typing, but after a couple of minutes she paused. It was clear she was in no mood to type. "Why don't you get married, Uncle?"

"Well, Esther, you said just now that I am a philosopher, and you know philosophers do not marry—Plato, Sankara, Spinoza, Kant and Schopenhauer, for instance. And those who married were no good as husbands—Socrates, Confucius, Ramanuja and Tolstoy, for example. Anyway, I am not so great a philosopher as to be a misogynist and I may possibly get married."

"That's great," she said, laughing "And I would have married you if you were ten years younger."

The conversation seemed to drift into the subject I wished to broach. "And I would have married you, Esther, if you were ten years older." Esther closed the typewriter and I asked, "How old are you now?"

"I will be eighteen next May" she replied.

"The age you become legally competent to exercise your will I replied, I shall by then, be thirty five, which would work out to a disparity of about seventeen years between us. That's about right according to our great law-giver Manu, who has ordained that a man of thirty must marry a girl of twelve... The Greek philosopher Aristotle was even more liberal. According to him the disparity in age between a man and his wife ought to be about thirty. He has sound scientific grounds for his theory. A woman's fertility, he says, ends at about forty, whereas a man's potency extends to seventy.... So I am hardly over-age for marriage to teenagers." Here both of us had a hearty laugh.

"Jokes apart, Esther," I said in a serious tone, "I want to tell you something very serious. You are now just the right age to get married. I know a handsome young Baghdadi Jew in Bombay, well settled in life, and I think you two would make an ideal pair. I spoke to your Dad about it. What do you say to this? If you have no one else in view, I shall arrange a meeting, here in my house. He is an acquaintance of mine, interested in literature. I shall invite him to see my library and you can join us for tea as if by accident and not by design. In case you do not approve of him, there would be no embarrassment. Shall I go ahead?"

Esther thought for a moment. "Thank you, Uncle, but not just now. For one thing, I am not particular about Jews. For another, I do not wish to get married as long as the war lasts. I want to contribute my mite towards the war effort. I hate Hitler. I want to join the WAC(I) (Women's Auxillary Corps, India) as soon as I am eighteen."

At this point Madhavan announced tea. I asked Esther to stay back and have tea with me, but she said she was expecting Samson to come home in a few minutes' time and left for her flat.

When I met Samson the next day I told him about my conversation with Esther, and we decided that the best thing we could do was to wait till she was eighteen.

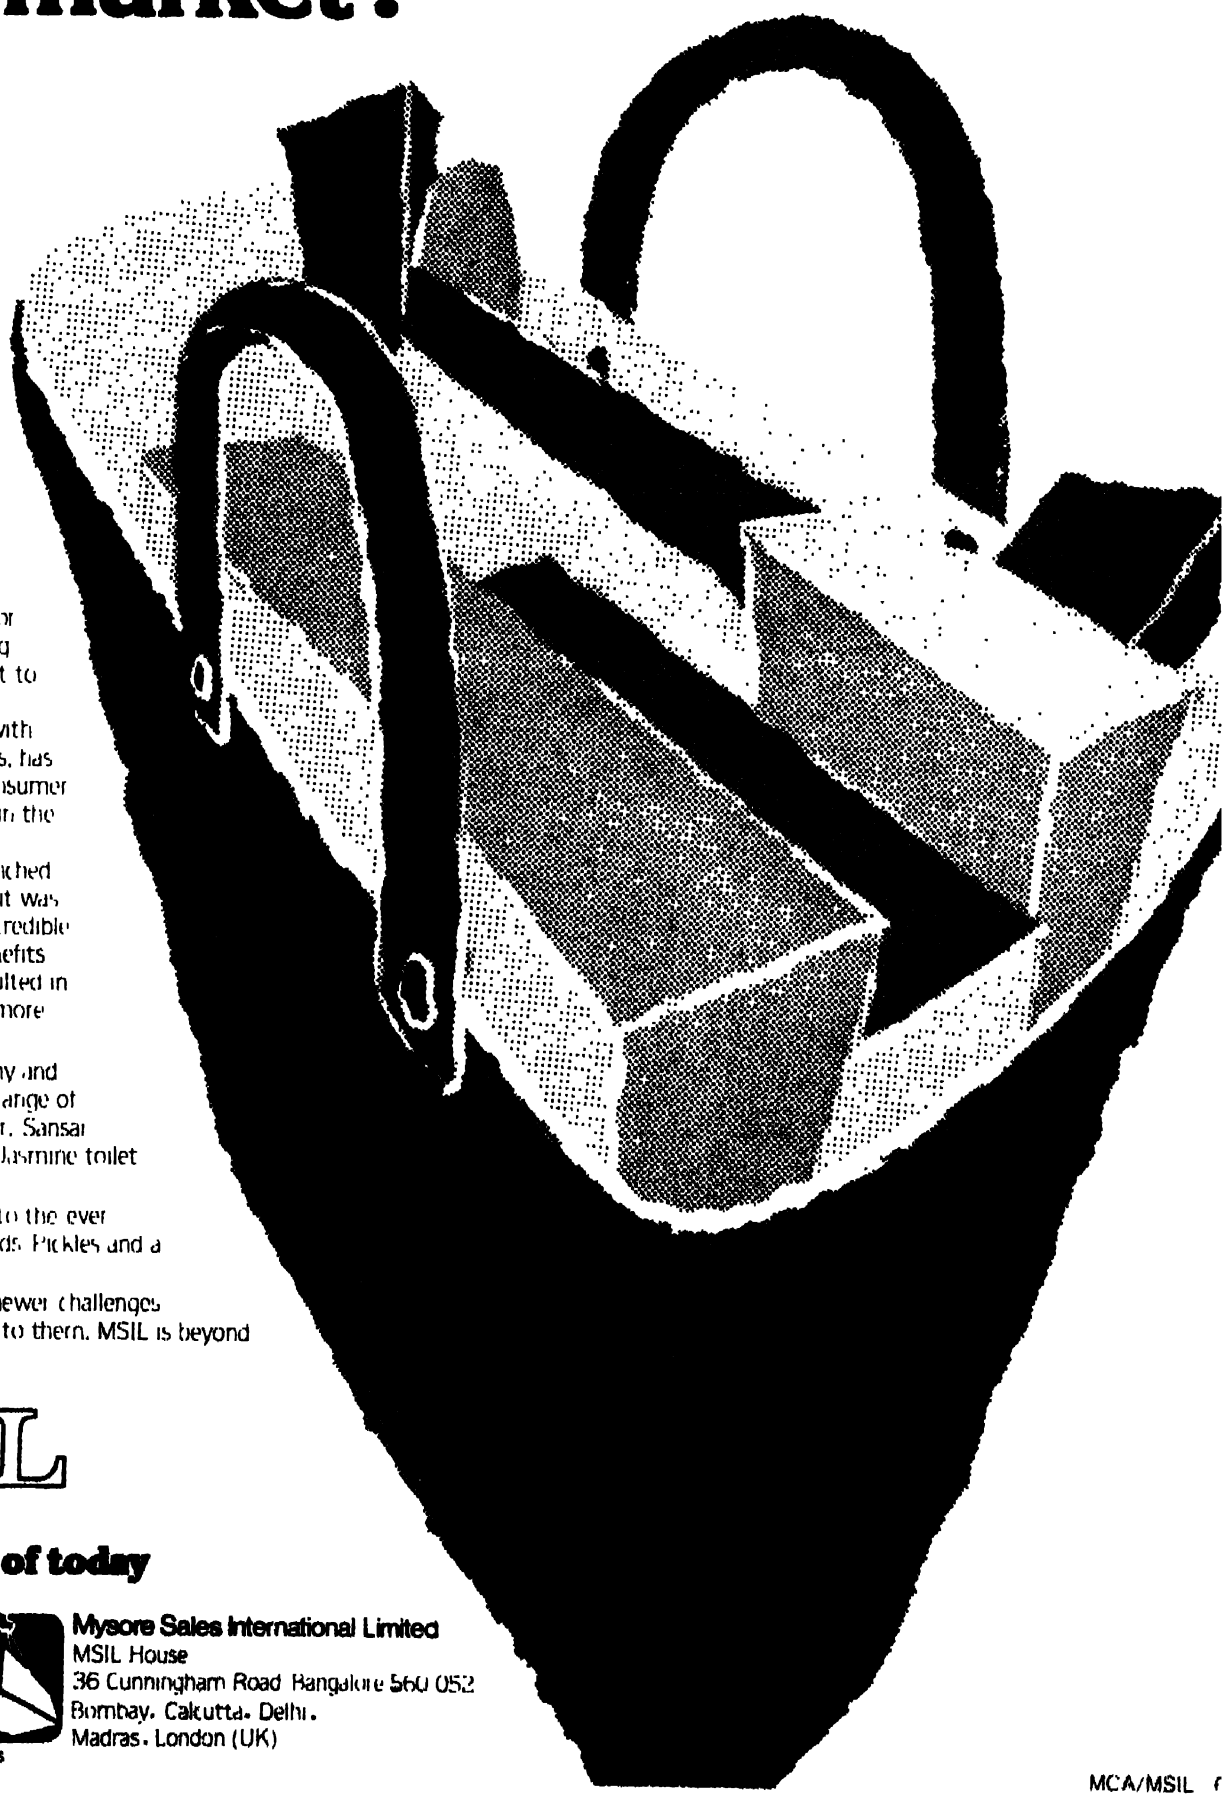
How do you honour commitments - and make a mark in the market?



With a sound corporate philosophy blended with strategic planning

For Mysore Sales International, the motivation has always been the consumer. For bettering products. And innovating marketing techniques. After all, MSIL has a commitment to fulfill. Better value at acceptable prices. This corporate commitment, effectively blended with sound management and marketing strategies, has helped MSIL, over the years, to win over consumer confidence and also make their presence felt in the market.

Take a case in POINT. When MSIL launched POINT, a premium detergent in the market, it was pitted against giants. But MSIL, through its credible advertising, honest proposition and user benefits was able to win over its consumers. This resulted in helping stabilisation of detergent prices and more utility benefits.

MSIL has carried through its philosophy and innovative marketing techniques in its wide range of consumer products. Like, Total Detergent Bar, Sansar Detergent Powder, Sandalwood toilet soap, Jasmine toilet soap and more.

The consumer can now look forward to the ever diversifying product range, like processed foods, Pickles and a host of others.

MSIL is always on the move, seeking newer challenges. And finding original and innovative solutions to them. MSIL is beyond marketing.

Those Painful Joints

THE precision of a concert pianist, the success of a surgeon who has to trust his ngers in the maze of blood vessels, intricate ternal organs and layers of blinding subutaneous fat, when he performs an operaon, the grace of a perfect pose caught for a eeting moment by a bharatanatyam dan-r, that last burst and leap which takes the inner in the hundred metres, past the inning post, all this is made possible only ecause the muscles and bones work in armony together. And at the crux of this uccessful arrangement are the joints which ork almost miraculously, in their endeavour help you make possible physically, what our brain wants you to do by way of iovement.

Usually these biological machines, degned for movement, rotate, slide, hinge and iove with the help of cartilage and ligaients and remain innocuous, quietly doing eir bit to make it possible for you to be obile. But there are times when these joints, ue to exposure to intense cold, congenital easons or bruising or most commonly due to eumatic disease, become sore, tender and ainful, often so unbearable that the person ttacked, suffers intense discomfort I have itnessed a patient who had to have her ears wiped by her husband as she could not ake the slightest movement. Of course that as an acute stage, and was corrected after rolonged treatment and patient deliberaon.

Arthritis is a very broad term used to escribe the condition where the joints be ome the major sites of a rheumatic attack Inder this head comes *rheumatic fever, out, osteoarthritis* and *rheumatoid arthritis.*

Arthritis is often believed to be a constituonal disease. Luckily for us it is not as ampant in our country, as it is for example, in Britain, where it is rated to be one of the highest crippling diseases. Osteoarthritis is a common disease with the approaching later years and is the result of the erosion of the cartilage from the joints which in turn brings about restricted movement. This situation is further aggravated by accompanying bony outgrowths. This often causes pain and a marked stiffness in the wrists, knees, hips, and of course every part of the spine, as it is a tapestry of joints.

The other fairly common type of the disease is Rheumatoid Arthritis which often finds children as victims. Rheumatoid arthritis could easily begin with a chill and you could be fooled into thinking you've caught "what's in the air", and that feeling could be further established with the fever and the characteristic stiffness in the joints that will follow in due course. Unlike osteoarthritis, which does not cause any real harm in the long run, rheumatoid arthritis is a much more serious disease causing irreversible damage by crippling. The joints and joint linings are inflamed and eventually the joint cartilage may be destroyed Any movement might be difficult and there may be gross deformity and limitation of movement gradually Worse still, the other organs of the body may be affected. nerves, organs and other muscles. In the case of children, an unfamiliar complication for the non-medical parent arises, the heart is affected more often than not, as the disease courses through the body and finds a lodging in the vital organs. Few parents are aware of the far-reaching consequences of the symptoms of this seemingly influenza-like disease

A disease of the same family, familiar to us through history and literature, is gout, the most discussed disease in Britain, perhaps, in fact the greatest ice-breaker after the weather! The origin of this disease lies in the upset chemical system of the body. The unusual amounts of uric acid manufactured by the body, reach the cartilage and find a comfortable niche to lodge itself in the form of ever-increasing crystals. Uric acid is really nothing more than the breakdown product of protein, and those who suffer from gout produce more uric acid than their "goutless" friends, though the reasons for this peculiar partiality in nature has not been confirmed by modern medicine. However, what has been established by way of statistics is the fact that there *is* a hereditary factor involved, and it is known to run in families

Years ago, in the 17th and 18th centuries, particularly, gout meant a swollen, tender, excruciatingly painful, big, red, toe There is some truth in this however and the big toe when attacked by gout is no longer a laughing matter This acute situation usually results from anything which might have caused a change in the level of uric acid in the blood Because deposits of the uric acid crystals, known as tophi, form a layer around the joints and even in the cartilage of the ears! The kidneys fall easy prey as well and the final stage could be renal failure, if the attacks are not checked in the earlier stages Gout has been infamously related to the rich and greedy, in most early works of medicine Greek, Indian, Chinese and early British, and not without reason, amazing though it may seem. The acute form is often suddenly brought upon by a sudden increase of protein in the diet, like liver or kidney

Technically speaking, joints are literally the pivots on which the bones and muscles coordinate. The movable joints which are cartilaginous are the ones which are usually the field for attack by the family of arthritic diseases. That is why it is the knee, wrist and back that are easily attacked.

In the realm of modern medicine, specialists prefer to use anti-inflammatory drugs like phenylbutazone, aspirin and cortisone. All rather strong, undoubtedly effective and mostly ensuring quick relief But not without side-effects. Those who depend on aspirin for example, enjoy temporary relief, and experience severe stomach upsets and nausea as continued doses of the drug are bound to cause an irritation to the stomach lining, sometimes very serious. Cortisones, any physician will tell you, have to be taken after much thought and tests. Some of the really severe side-effects of cortisones is the retention of water and swelling of tissues, diabetes, hair-growth and high blood pressure. Not a very happy frame of affairs, would you say? But then which disease persists without its string of maladies, aches and pains!

A brighter side however, does emerge, with the increasing number of the afflicted turning to "Home Remedies," some of which are certainly worth trying.

Out Of The Woods

Vijay Kumar presents a column based on the relentless principle of "give-and-talk".

GIVING a city a face-lift is like undergoing a course of homoeopathic treatment You are told it aggravates before it works To have a place beautified, therefore, you must first fill it with pot holes and ditches and pour into them your witches' brew, a little bit of mud and concrete and a couple of hapless rodents that get in the way

Giving a city a face-lift also means putting people out of the way, not the convenient people but the inconvenient ones Overnight the economically weaker sections who provide the Government with its sole justification for existence are dispossessed of all they have acquired over the months Not, mind you, over the years, for it is only some months since they had been thrown out of their last habitat

It is the contention of the very rich that the very poor multiply too fast and too soon It is the boon of the very poor that the very rich don't multiply all that quickly—and when they do they get divided

The best thing about handing a city a face-lift is that it gives the conservancy staff something to do Not that they have nothing to do otherwise, it is only that they get to do what they have to do and that is a great thing in a democracy Shows you the power of the people otherwise thought entirely powerless

I spoke the other day with a true representative of the people He should have been fat but he was lean, should have been unintelligent but was frightfully clever, and of course he should have been very well-off and he was

"Many great civilisations," he told me, "perished the very moment they were giving themselves a face-lift"

"Would that be true of cities as well?" I asked, like the country bumpkin that I am

"There are cities and cities It all depends on what city you are thinking of"

"Delhi It had a face-lift at the time of ASIAD It was given another for the Non-Aligned Summit Two beauty treatments in the course of a few months There is no containing its immodest ambition"

"Oh, Delhi is safe enough It isn't a city yet It is a village"

"And villages are safe from harm?"

"They are that," he beamed "A village is built to last It is made not of people but of their thinking Since the Delhi man will always be a villager at heart—that tall glass of *lassi*, you know—Delhi will never change It cannot"

And there and then I made up my mind that come what may—storm or cyclone or the flood of Yamuna waters, or the face-lift of the Central Secretariat—I should remain in Delhi, always true to its salt

And there is much salt in its very atmosphere Salt, adulterated with the sands of the Rajasthan desert

Quite the wrong time to be thinking of SALT, in the same breath as the Non-Aligned Summit and all that, but whatever happened to SALT which was adulterated by and with the Americans and Soviets "Alive and well," say some "No comment," say others "One two, three," says a bright boy, wanting to tell no more than that he can count up to a certain number

It is my earnest hope that some day in the not too distant future all SALT summits will be held in New Delhi Then the city being no more than a village and we being what we are, the Americans will beautify the Soviets, and *vice versa* There is no escape

"When the weather goes from bad to worse, and then from worse back to bad, professional hacks write about animal and bird behaviour, and all of it makes good copy Flowers, too, bloom or wilt as the season changes and, by God, there is also that vexing problem of drinking water supply Either it is there, a bit short, or it isn't altogether

Even today, so long ago after Independence that few can give you the actual date of Mr Nehru's tryst with destiny speech, water is an attention—getter One would have thought that it would have been taken for granted

"Wrong," cries a busybody looking over my shoulder as I type this "It has been taken for granted That's why the pretty pass we are in!"

He may be right When Chief Ministers discussed the waters of the rivers they had in mind the elections in their States They could not be bothered by any other considerations And at some time soon after their talks began they moved on to more exalted topics The elevation began with references to the monsoon and the rains it would bring

Their officials joined in The computation was always as if the monsoon was a sure-fire thing though there might be no sparks in it They took the monsoon for granted

"Night," says the busybody at my elbow and I have a hard time silencing him I pour down his throat water of a certain kind hoping that he will choke Perhaps he will too when this column is done entirely

"Why", asks a correspondent, 'is there no mention of sports in your column?"

I would like to assure this gentleman that there is no particular reason It is not as if sports have been blacklisted But they get dated easily and it is not the done thing now to recall the splendid trouncing we got at the hands of the Pakistani cricketers A bit of information like three for 42 becomes meaningless when others are talking about five for 88 It belongs in history books— and today's history books are, indeed, more sporting than any other kind Including *Sunny Days*

But we can always talk of *Gandhi* A hardy perennial that, and a great credit to *British* cinema and an *Indian* entry at some international film festival Ultimately it will be those Hollywood Oscars that count ■

THE lights in the apartment were low and so was the music "You say you can read my mind?" the handsome young bachelor demanded

"Yes," replied his beautifully proportioned date

"OK' he challenged " go ahead "

"No" she said "You go ahead "

THE middle aged suburban father was reading his Sunday newspaper when his daughter's boy friend came to the house

Said he "I realise that this is only a formality, but I want to ask you for your daughter's hand "

"And where did you get the idea that this was just a formality ?"

"Well, from her obstetrician ' replied the boy

THE fact that I'm a millionaire today is due to a lucky stroke,' said Ramesh "My rich uncle in Madras had one!"

A VACUUM cleaner salesman got a housewife's permission to demonstrate his vacuum cleaner He opened a little bag from which he took out confetti, a handful of sand, some pebbles, egg shell and soot and spread it over the carpet

Salesman "Now Madam, you will see how wonder fully this new vacuum cleaner just swallows all this and makes your carpet clean in no time It works so well that if it does not come up to my promise, I am willing to eat the lot I have put on your carpet "

Hearing this, the lady started walking towards the kitchen

Salesman "Where are you going Madam?"

Lady "I am going to get you some salt and pepper, because we have no electricity here "

ALL he had asked for was a little good-night kiss, but she haughtily rebuffed him with, "I don't do that sort of thing on my first date "

"Well," he replied with sarcasm, "how about on your last?"

WHEN I get a cold, I buy a bottle of whisky for it And within a few hours, it's gone "

"Gosh, that's a short time to get rid of a cold "

"No it's the whisky that goes!"

THE pretty young thing came slamming into her apartment after a blind date and announced to her roomate, "Boy, what a character! I had to slap his face three times this evening!"

The roomate inquired eagerly, "What did he do?"

"Nothing," muttered the girl "I slapped him to see if he was awake!"

A DRUNK was walking along the beach, stark naked with his clothes over one arm A policeman ran over to him and asked, "What's the big idea of walking naked on the beach, with your clothes on your arm?" "Gosh, Offisher, I can't find a bush to dress behind!"

THE little boy looked at his mother's fur coat and remarked, "How that poor beast must have suffered so you could have that coat!" "Quiet," his mother scolded, "Don't talk about your father that way."

MOTORIST (who had just been handed a receipt for a fine) "What shall I do with this receipt?"

Policeman "Keep it When you get ten of them, you'll get a bicycle "

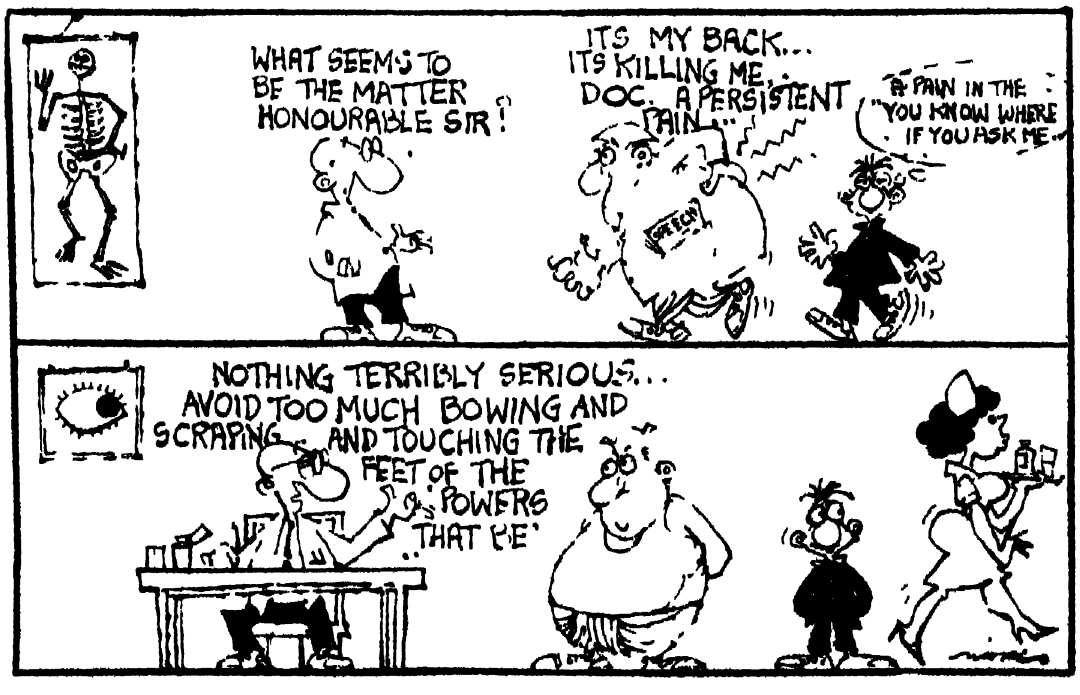
CAROL had been dating one man steadily for almost a year, and her mother was growing concerned

"Exactly what are his intentions?" she demanded

"Well, Mom, I am really not sure" Carol said "He's been keeping me pretty much in the dark "

Ah, you have made some mistakes in your lessons, Sir—They have asked us to punish you on their behalf!"

THE HON'BLE MINISTER BUNDALDASS • mario



WHEN I was in Africa," the man boasted, "a lion ran across my path I had no gun on me, so I took a pail of water and poured it over his head and he ran away!"

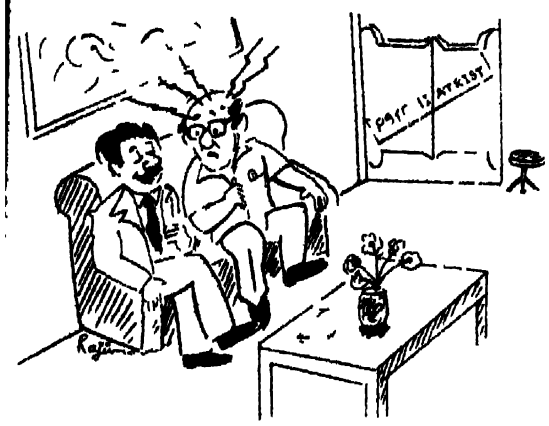
"I can vouch for that," said a bored listener "I was in Africa at the same time and the lion ran into me When I stroked his mane, it was still quite damp "

"HOW close did the lightning come to you?" asked the farmer, driving up to the tree where his hired man had taken shelter from an electrical storm

"Well," stammered the hired man, "I don't know, but my pipe wasn't lit before "

A SMALL boy was noticed selecting a postcard with a sexy nude woman on it A woman seeing this, asked him if he wasn't bit young for such a picture, and he replied, "Oh, it's not for me It's to be put in my report card envelope, so Daddy won't notice what he's signing "

SAYS a wealthy businessman, "Once or twice a year I walk through the whole income-tax department just to see what my employees are doing "



'I hope the ringing in my head does not disturb you"

A PATRON in a Bombay beer joint found a fly in his glass of beer So he called the waiter, while he was carefully picking out the fly with a spoon, and told him to exchange that glass of beer

While the waiter was gone, a customer at the other end of the table, who had already finished half his glass of beer, whispered to the first guest

"Psst! could you please lend me that fly?"

LILLY just could not imagine why she was so popular "Is it my lovely hair?" she asked a friend

"No"

"Is it my cute figure?"

"No"

"My personality?"

"No"

"Then I give up"

"That's it"

DEFENDANT "I have been wedded to truth from my infancy"

Counsel "Is the court to understand by implication from this statement, that you are now a widow?"

"NOT that I believe in reincarnation," said the young man to his hyperprudish date "but what were you before you died?"

"MY, what an attractive baby "said the hand some astrologer to the sweet young thing pushing the perambulator "Do you happen to know what sign he was conceived under?"

"Yes" blushed the young mother "It was KEEP OFF THE GRASS"

AN Irish woman went to the marriage counsellor to ask about a divorce "Does your husband ill treat you?"

"No, he is a kind, gentle man"

"Does he drink and gamble?"

"No, he gives me all his money?"

"Then, of course, infidelity must be the trouble?

'Yes, I suppose it must be, one of the kids isn't his"

"GEE," mused the pretty young high school girl as she stared longingly at her older sister's new engagement ring "It must be wonderful when you're married"

"As far as I'm concerned," her sister replied, "it's wonderful whether you're married or not"

FRIENDS were surprised when Frank and Jennifer broke their engagement, but Frank had a ready explanation

"Would you marry someone who was habitually unfaithful, who lied at every turn, who was selfish and lazy and sarcastic?"

"Of course not," said a sympathetic friend

"Well," retorted Frank, "neither would Jennifer"

A MAN asked his doctor to tell him frankly what was wrong with him "Well," said the doctor, you eat too much, drink too much and you are terribly lazy'

"Thanks," the patient replied, 'but would you be kind enough to put that into medical terminology? Then I can have a week off from the office"

UNTIL now there were two R.K. Laxmans. The cartoonist, known to millions, their day incomplete without him. And the conversationalist extraordinary, known to his friends, astounding them with his total recall and his reproduction of every little nuance of tone and gesture.

Now there is a third R.K. Laxman. The writer. It is true that he has been writing for years. His novel *Sorry, No Room* appeared in 1969. It was a good first draft which would have been impressive if he had followed his brother R.K. Narayan's habit of revising and rewriting. Off and on Laxman's essays and stories have appeared in the *Weekly*. Their publication now in book form in *Idle Hours* establishes his writing skill and strength.

The cartoonist is a reducer. He achieves his effect by omission. He retains only what he considers the bare essentials, which he then exaggerates and fixes. The narrator works the opposite way. He adds. He piles detail upon detail and the sum total, again, fixes the incident or the individual. Laxman's writing is like his conversation, ebullient and profuse. In this he differs from that other cartoonist-writer, James Thurber, whose pen stuck to economy whether it drew or wrote.

Idle Hours consists of stories, essays, reminiscences and travel sketches; certainly it is no product of idleness. The stories have a family likeness to R.K. Narayan's. And why not? The two brothers have shared a comic vision and have collaborated as writer and illustrator. Laxman as Dodu was the hero of an early Narayan story. The schoolboy in *The Day The Viceroy Came*, in this book, is a slightly bemused cousin of the knowing Dodu, even as Daga in *An Accident* is of the *Man-eater of Malgudi*. The imperishable Ramaswami is also straight out of Malgudi. The mark of Malgudi is hard to escape. People will keep emerging from there to pursue their particular folly zestfully, unselfconsciously and lovably.

As in the work of an artist so with a writer, certain lines stay in the mind, held in position. Laxman uses telling phrases: when he describes Krishna Menon as some dark wasp or writes of Modern Frame Works which "was actually an extra-large wooden packing case mounted on wobbly legs tucked in a gap between a drug store and a radio-repair shop." (Unmistakable Malgudi again).

A couple of essays deal seriously with his own trade of cartooning and tell us what goes on in a cartoonist's mind. The account of his encounters with David Low, his first inspiration, is a neat one, with a fine final self-deprecatory twist.

The impression left by the book is not only of the eye which sees the ridiculousness of the world but of a heart which is indulgent towards the ridiculous. He pricks balloons not because he likes deflation but because they bulge so and because he wants to hear the urchins' laughter in the sun.

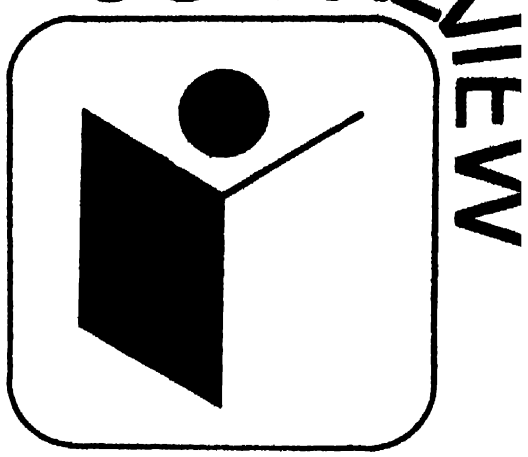
"IDLE HOURS" by R.K. Laxman; IBH; Rs. 17.50.

Racy Fiction

THEY say charity begins at home. No, it doesn't. At least, not with Bagley's benefactor Jan Willem Hendrykxx. For, the death of this wealthy gentleman leaves only an agricultural college at god-forsaken 01 Njorowa, in Kenya's Rift Valley, richer and that, too, by a staggering £ 34 million. While Hendrykxx's only surviving kin—Dirk Hendriks, a South African, and a young American, Henry Hendrix, a drop-out—receive, in comparison, a paltry £ 3 million apiece.

Why would anyone will away so colossal an amount to an obscure agricultural college? Why indeed? This question perplexes Max Stafford, head of London's Stafford Security Consultants, just as much as it does the reader. But Max, unlike the reader, has a vested interest.

BOOK REVIEW



For one thing Alix Hendriks, Dirk's wife is a very dear friend. And, for another, why is Gunnarsson, of Gunnarsson Associates of New York, interested? Max Stafford "had never met Gunnarsson but had sampled his methods through the machinations of Peacemore, Willis and Franks which was the wholly-owned London subsidiary of Gunnarsson Associates..."

Max's distaste for Gunnarsson's mode of operations aside, Max sees a rival in Gunnarsson. Especially, as he now hopes to set up in business on the other side of the Atlantic and so add 'Inc' after his company's name.

The author amplifies the scenario with thrills from African history, particularly Kenyan history. The plot is plausible, and unwinds easily; unfortunately it peters out rather tamely at the end. A trivial slip, but a slip nonetheless, is Bagley's dubbing the Pillays as Gujarati. He is obviously not familiar with either Indian names, regional origins, or castes. This is evident from our introduction in the book to a Sikh named Nair Singh.

All said and done, Bagley's *Windfall* would make for enjoyable reading on a Sunday afternoon, especially to the armchair-specialist of light fiction.

"WINDFALL" by Desmond Bagley; Rupa (Paperback); Rs 15.

This Week's Bridge
Tolani Masters—II

EIGHT teams, two from each zone, played the National Masters Team Event Finals in Bombay, in February. This event is sponsored by Dr Nandlal Tolani, the Bombay shipping and Construction magnate, who donates a magnificent sum every year as cash prizes for this event, apart from contributing substantially towards the travelling, lodging and boarding expenses of all the outstation teams

The eight teams played a Double Round Robin, each match of 16 Boards, with the top four teams qualifying for the semi finals The West Zone teams Jimmy Mehta and Anand Mehta finished 1 — 2, and late rallies saw both the East Zone teams Calcutta Furniture and Baikaliki qualify 3 — 4 As winner of the Round Robin, Jimmy Mehta had the choice of opponents in the semi finals They chose Calcutta Furniture, leaving Anand Mehta to play Baikaliki in the 48 board, 3 session match

Jimmy was down 15 imps after the first 16 boards, but outplayed the Calcutta team in the next 32 boards to win by over 50 imps

The Anand Mehta - Baikaliki match was close all the way, although the former won each of the three sets, to win eventually by 25 imps

The two Mehta teams thus clashed in the Finals Anand, fresh from their triumph at the Calcutta International event, consisted of their regulars Anand Mehta, Amrish Parikh, Avinash Gokhale, Rajesh Dalal, Jaggy Shivdasani and guest star Orlando Campos Jimmy Mehta's team was Jimmy Mehta, Sharad Mhatre, Manohar Kher, Balu Ukidave and guest stars Bhalchandra Tavkar and Ashok Ruia For the first time since they began playing as partners in the late sixties, Campos and Ashok would play against each other.

The standard of play throughout the Finals was awful, far below what a National Finals should produce. Good bids and plays were few and far between, although they did exist, and errors predominated. Here are a few:

East dealer, None Vul

	♠ 732 ♥ K943 ♦ Void ♣ KQ10963	
♠ 965 ♥ AJ87 ♦ 10543 ♣ 75	N W E S	♠ AK1084 ♥ Q1062 ♦ J ♣ J82
	♠ QJ ♥ 5 ♦ AKQ98762 ♣ A4	

At one table, East Passed, South opened Five Diamonds, which East Doubled after two Passes.

West led the Ace of Hearts, on which East played his Queen. Looking at his own Jack of Hearts, West played East for a singleton Heart, most improbable on the bidding, and continued the suit! Eleven tricks were then easy At the other table East and West had bid and supported Hearts, on a slow auction, so when West led the Ace of Hearts and East played the Queen, West had an easy Spade switch for down two

A few deals later:

North dealer, Both Vul

	♠ A63 ♥ 10875 ♦ A4 ♣ K872	
♠ Q7 ♥ KQ63 ♦ 1075 ♣ AJ103	N W E S	♠ K98542 ♥ 2 ♦ QJ83 ♣ 94
	♠ J10 ♥ AJ94 ♦ K962 ♣ Q65	

The auction went.

West	North	East	South
	P	P	1H
P	2C (i)	2S	P
P	3H	P	P
D'ble	All Pass.		

(i) Drury — Heart fit and a maximum Pass

West led the Queen of Spades, and continued the suit when declarer ducked in dummy The Ace won, and declarer cashed two Diamonds, ruffed a Diamond in dummy, and played a Spade, ruffed with the nine, over ruffed by West A low trump came back which declarer won in hand, leaving this position, East West having won two tricks, declarer five·

	♠ Void ♥ 108 ♦ Void ♣ K872	
♠ Void ♥ K6 ♦ Void ♣ AJ103	N W E S	♠ 985 ♥ Void ♦ Q ♣ 94
	♠ Void ♥ A4 ♦ 9 ♣ Q65	

Declarer played his last Diamond — if West had had the Queen of Diamonds, the contract would be cold But West didn't have the Queen · – he should have ruffed with the King and exited with a trump, leaving declarer with two inescapable Club losers Instead, West discarded a Club! Declarer ruffed in dummy, and the Ace and another Heart threws West in, forcing him to lead Clubs, giving declarer his doubled part game contract!

Then there was this deal!

West	East
♠ A6	♠ J10
♥ AQ9632	♥ 11087
♦ 9843	♦ Void
♣ 2	♣ AQJ9875

West was declarer in five Hearts, North having overcalled in Spades, South having raised. He got the lead of the King of Spades He won his Ace, and played a Club to the Queen! South won his King, returned a Spade, and declarer had to lose a trick in trumps as well, for one down!

At the other table Orlando Campos demonstrated the correct technique on this hand He too was in five Hearts doubled to boot He won the Spade lead, played a Club to the Ace, and passed the Queen around, discarding his Spade, not caring if North won the King — all he would lose now was a Heart, if the King lay offside As it happened, South had the King of Clubs, so Ollie made six!

Anand Mehta won this 64 board match 155 — 131, and with it the right to play in the International Team Selection Trials at Nagpur in March

Readers' Questions:

Readers are invited to write to me, as a few already do, with any question on any aspect of the game I shall answer these questions, in this column, which (i) Are of general interest, (ii) Instructural, and (iii) Can be answered in brief

I regret it will not be possible to me to reply to readers' queries individually

Readers may write to me at Bridge Digest, 17, Deccan Gymkhana, Pune 411004

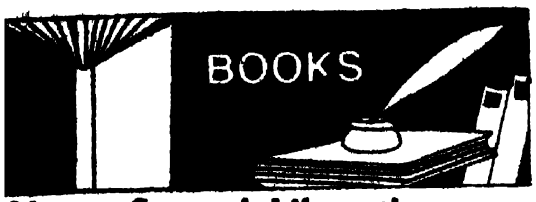
The Weekly Pick



Obote, Second Liberation

Vijay Gupta , Vikas, Rs 125

Dr Apolo Milton Obote terms the freeing of Uganda from the regime of dictator Idi Amin as the Second Liberation. This book describes Dr Obote's valiant struggle against heavy odds before and after the Second Liberation.

After a brief introduction to Ugandan history and politics, the author discusses Obote's life and philosophy, his political ideology, his social and political activities and, in particular detail, his role in mobilising the national rebellion against Amin

The book however, contains no particular appeal for the average reader

Understanding Backache and Joint Pain Dr R.T. Acharya, Rs 45

For the vast multitudes suffering from backaches and related disorders, this book provides extremely beneficial and basic knowledge

The author, an orthopaedic surgeon and acupuncturist, gives an exhaustive explanation about the nature of sciatica, slip disc, lumbago, spondilitis, joint pains, arthritis and gout, in particular He also analyses the efficacy of acupuncture, and pain-relieving drugs.A lucid and succinct style makes the book readable, though there are numerous grammatical errors.

Contemporary Pakistan: New Aims and Images

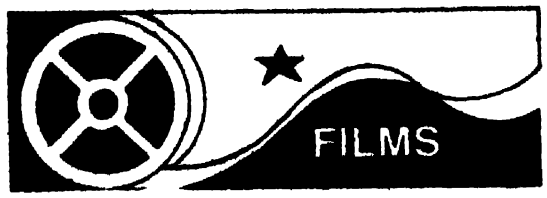
Edited by Pran Chopra, Vikas, Rs 75

This book is a record of the changing trends in Pakistan, seen through the eyes of several Indian scholars and journalists who have met people from all walks of life in Pakistan.

Bashiruddin Ahmed, Bimal Prasad, Urmila Phadnis, Bhabani Sengupta, Ajit Bhattacharjea are among those who have contributed their observations on the flux in Pakistan since the downfall and judicial murder of Zulfikar Ali Bhutto.

The writers present divergent though generally sympathetic views on the Zia regime's relations with India, the US and the Soviet Union since Moscow decided to march its troops into Afghanistan. The narrative is enlivened by long interviews of Inder Jit, Ajit Bhattacharjea and Rajendra Sareen with Pakistan's President, which have been published earlier.

Minnie



Snakes Alive!

Live rattlesnakes were let loose in Madras' Ega theatre last month during a screening of *Gandhi*. The theatre staff caught and killed five snakes inside the auditorium. The film was initially screened at the theatre with police protection. The non-inclusion of Dr Ambedkar in the film has resulted in severe protests from a section of the people. Posters of the film were systematically mutilated and smeared with human and animal excreta.

—Trade Guide

Award For Ann-Margret

The actress Ann-Margret has received the 12th annual Humanitarian Award of the Myasthenia Gravis Foundation, an organisation sponsoring research into a disease that leaves its victims weak from muscle fatigue. The foundation also honoured Ann-Margret's husband of 18 years, producer-writer Roger Smith. He suffers from the disease and was too ill to attend the festivities. The group estimates one million Americans suffer from the disease, for which there is no cure.

—International Herald Tribune

Dual Premiere

In 1870, to forestall an unauthorised American production of their latest operetta, *The Pirates Of Penzance*, Gilbert and Sullivan arranged for virtually simultaneous opening nights in England and America. Now, 104 years later, Producer Joseph Papp's $12 million movie version of *Pirates* has received another dual premiere: on television and in theatres. On February 18, Universal Pictures simultaneously showed the movie on 17 pay-per-view subscription and cable systems and opened it at 91 movie houses around the country. It was the first time that a premiering film had also been released on television.

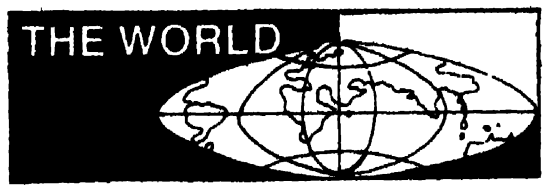
—Time

Sued For Bump On Head

British actor Richard Harris, who missed his final Camelot performance after his head hit a car door outside London's Apollo Theatre, has sued the theatre company for damages. Harris, 52, alleged negligence by the theatre company. In his High Court writ, the actor has also claimed breach of contract.

—The Daily

Jackie



Queen In Good Humour

The Queen of England is not renowned for her sense of humour Indeed, in Britain she is seen as a rather dull lady obsessed with horses and Corgis So it came as a pleasant surprise when she told Ronald Reagan in California (where storms and incessant rain had been raging for a week): "I knew before we came here that we had exported many of our traditions to the US But I had not realised before that weather was one of them." Mr Ronald Reagan thought the remark so funny that he "broke up"

—The Sunday Observer

Love Of God

Bruce Strong, a 40-year-old Gaum college teacher, likes the name of God so much that he wants it for his own. He has asked a court for the right to change his name to God, saying he had no religious affiliation but already used God as his name sometimes and wanted to make it official. The judge said he would study the request.

—Reuter

Marx With Sparks

The Communist Party is staging a "cultural extravaganza" at Alexandra Palace on June 25 to celebrate Karl Marx's centenary. It is to be called Marx with Sparks. As well as Chinese acrobats and Russian gymnasts who will be performing for the first time alongside each other, the organisers are confident they have secured the services of the Scottish comedian Billy Connolly.

They are working on another bearded superstar, Communism's biggest living folk hero, the one and only Dr Fidel Castro. That would certainly be a coup!

—The Times

Indian Woman Chosen

An Asian woman has been chosen for the first time by Britain's ruling Conservative Party to run for Parliament, the party said.

Mrs Pramila Le Hunt, 44, a London teacher of English, was picked to contest a seat held by the Opposition Labour Party in Birmingham, a midlands city with one of Britain's largest communities of immigrants from the subcontinent.

—The Daily

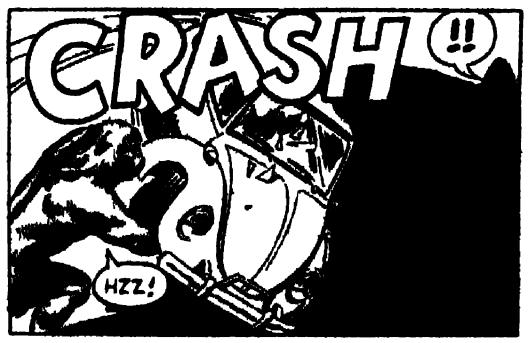
LEE FALK

CAPTAIN.. I'M NOT WAITING FOR THOSE CATS TO GET HUNGRY! I'M GOING--
NO CHANCE! WAIT! THERE'S THE NATIVE WITH OUR RIFLES!

HEY YOU! HELP US! GET US OUT OF HERE! I'LL PAY YOU A THOUSAND.. TWO THOUSAND..!
?

SHOOT YOU FOOL! BLOW THAT MONSTER AWAY!
MEANWHILE..
UH UH UH



CRASH !!
HZZ!

HZZ HZZ!
NOTHING ON EARTH IS THAT STRONG!
THAT THING IS! GET GRENADES READY
SAM DARRY 1/2

CHIEF NOW WHAT?
!
HRZ?
WHEN I GIVE THE ORDER

PULL THE PINS TOSS THE GRENADES AND BLOW THEM SKY-HIGH! HEY WHAT'S THAT DOING HERE? GO AWAY
HZZ HZZ!
HZZ!

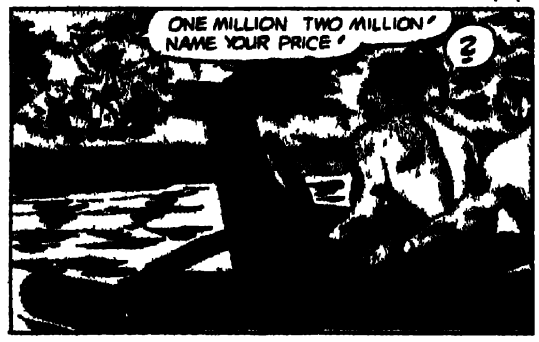
IF WE COULD JUST GET OUR RIFLES FROM HIS CANOE
YOU... I'LL PAY YOU ONE HUNDRED THOUSAND, TWO HUNDRED THOUSAND TO COME AND GET US!



ONE MILLION TWO MILLION! NAME YOUR PRICE!
?

HZZ, HRZ,, RZZ DID THOSE BAD PEOPLE TRY TO HURT YOU? HEY ONE AT A TIME..
HZZ
HRZ
RZZ
WHO IS THAT GUY, CHIEF?
WHAT HE LOOKS LIKE,, A BANDIT! GET HIM! BLAST THAT CHOPPER

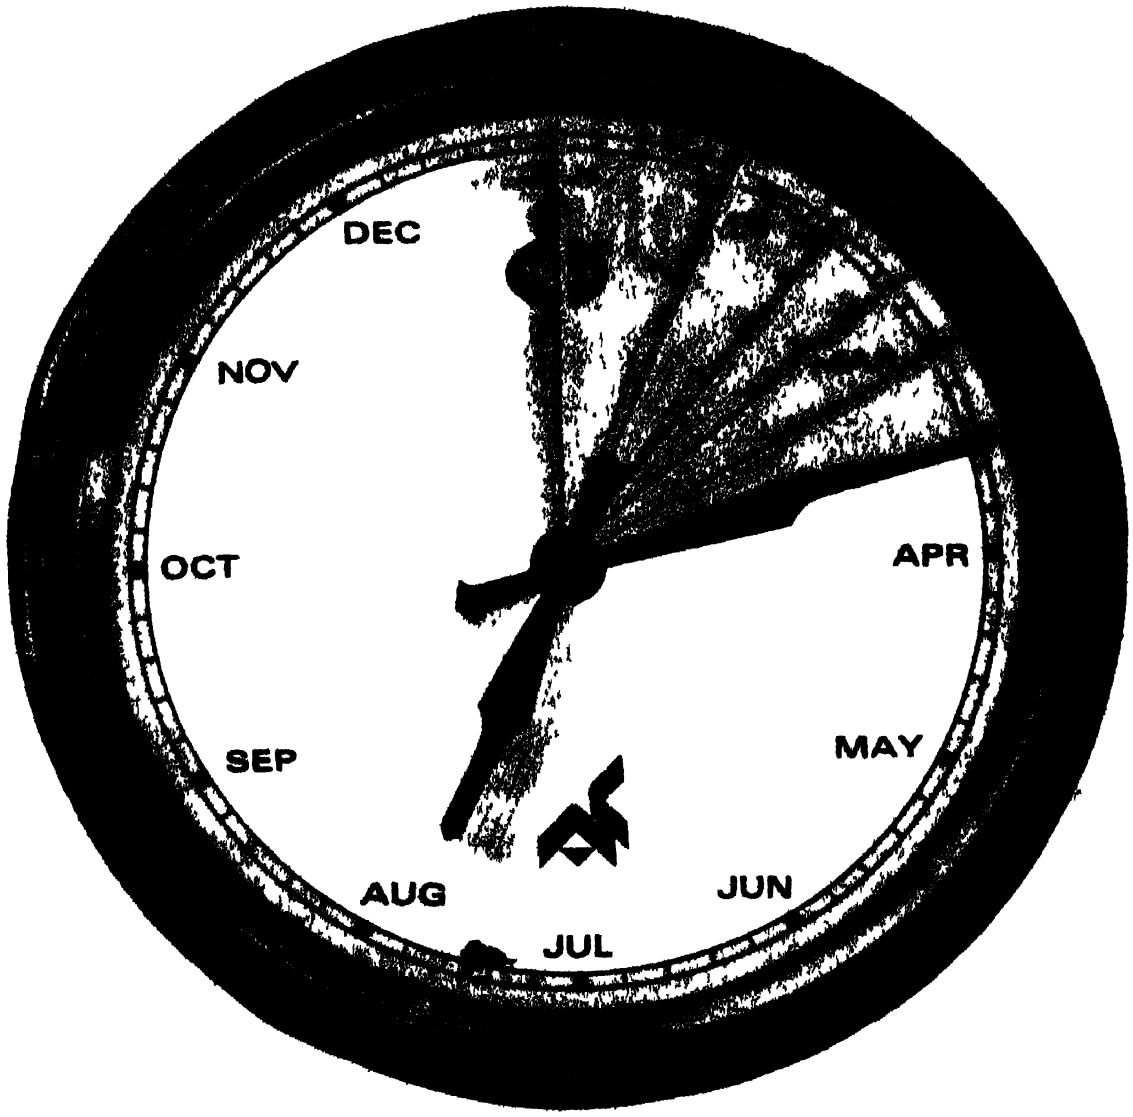
HEY WHO ARE YOU WHAT ARE YOU DOING?
TAKING MY FRIENDS HOME THEY'VE BEEN KIDNAPPED STAY, CHIEF!

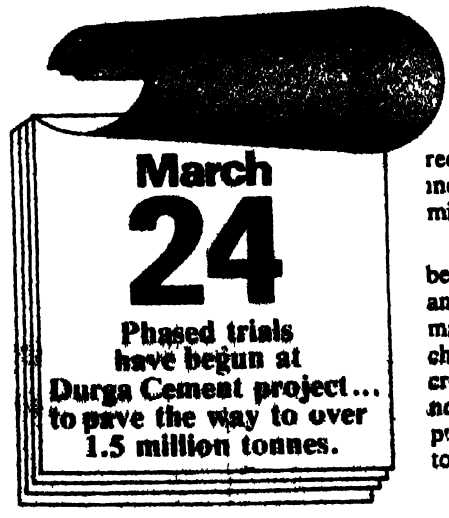
THEY CAN'T GO THAT BIG ONE HAS TO FACE CHARGES, PROPERTY DAMAGE!
THEY'RE NOT HUMAN, CHIEF THEY'RE CAVE MONSTERS YOU CAN'T ARREST THEM.

WHO'S GOING TO PAY FOR ALL THAT DAMAGE?
GIVE THE BILL TO CAPTAIN BLADE, ANIMAL DEALER.

CHIEF, THIS DIDN'T REALLY HAPPEN. IT'S A DREAM, WE'LL WAKE UP..
(..SPUTTER.)
(..SPUTTER.)
(..GASP)
(..BLAST.)

We work round-the-clock... and march ahead of schedule





Modernisation, expansion and growth - we cement them all together.

When our Vizag unit was commissioned in October 79, capacity virtually doubled - from 2.4 lakh tonnes to 4.8 lakh tonnes.

We have now started used trials, ahead of schedule, Durgapuram (Nadakude) to further increase capacity to 6 lakh tonnes.

Our growth is gathering geometric proportions - we've received a Letter of Intent to increase our capacity to 1.24 million tonnes.

Growth has now practically become a way of life with us and we have been continuously marching ahead to meet new challenges. The present capacity creation of 12.4 lakh tonnes is now paving the way for production of over 15 lakh tonnes by 1986
